## **Untreated Seed Statement**

Adaptive Seeds only sells untreated seeds. None of our seeds are genetically modified.

Our farm has been Certified Organic by Oregon Tilth since 2013.

As of 2015, Adaptive Seeds is a certified organic handler. This allows us to sell seed that other certified organic growers produce as organic.

The non-certified seeds that Adaptive Seeds sells were produced by small-scale, regional growers that have chosen to be uncertified, or were not certified when the seed was produced. However, all of these seeds were grown with ecologically based agricultural practices where no synthetic chemicals or excluded NOP methods are used.

Many of the non-certified organic varieties that we sell are not available elsewhere. These non-certified organic seeds are usually permitted for use in certified organic systems as long as there is not an organic source available for the specific variety. Please check with your own certifier to verify your exemption guidelines.

Thank you for supporting Adaptive Seeds.
