Welcome to our 2020 Adaptive Seeds Catalog!

When we founded Adaptive Seeds in 2009 and printed our first seed list in 2010, our ambition was simple: Find a better way to distribute the seeds we were stewarding than what we were able to do through our work as Seed Ambassadors at local seed swaps and through the Seed Savers Exchange yearbook. We also hoped our hobby and its seemingly endless need for totes and tarps would begin to pay for itself. It took us another four years to decide to take the business seriously, but even then, we had no idea how far we would go.

Now, ten years later, our product list has grown from 195(ish) products to something around 650! And we’re very excited to announce that for the first time, all varieties printed in this catalog are certified organic! Our goal from the start was to grow slowly, at a rate that we could sustain and that could sustain us as we learned how to run a business. We’ve mostly succeeded, but even 10 years in, it is clear that we still have so much to learn. This is perhaps one of the most exciting aspects of what we do here at Adaptive Seeds, as each season has its own challenges and opportunities. Every day we are grateful to have the support to live the dream of growing quality organic seeds for home gardens and farms both near and far.

Thank you for being a part of this journey.

We are a farm-based seed company, and farming in the era of climate change certainly keeps us on our toes. 2019 was no exception. The weather threw us a few curve balls (read more about this in Sarah’s Soapbox now published on our blog at seedambassadors.org), but overall we had a good season and produced seed for 325 varieties (some for research and/or preservation) with our small crew. Each one of these seed lots is evaluated repeatedly in the field, then hand harvested, threshed, cleaned, dried, and often cleaned some more before being sent away to independent laboratories for germination testing.

In 2019 after nine years on the land, we finally built a deer fence around the perimeter of our farm – 1.25 miles of fencing! Andrew worked with our friend and neighbor Marco Franciosa, who spent most of his summer on this project, and we began seeing results well before the project was complete. We’re excited about the possibilities the new fence will bring, including fewer crop losses and importing less fertility through integrating animals into our production. While the fence has been effective in keeping out deer and elk so far, our resident coyotes have figured out how to get through, which keeps us hopeful the rodent population will not get too out of control.

We’ve updated our packet design this year, with pre-printed paper seed packets and a small sticker with variety information. Growing and seed saving information will now be a few clicks away on each variety’s product page on our website. There you’ll also find photos, reviews, and additional information.

We’ve added 46 new and returning varieties for 2020, which includes 20 flowers! Thanks to Kathleen Beeson for this year’s celebratory cover featuring some of this season’s favorites. Thanks also to Jo, Beth, Kait, Anna, Kelly, and Justin whose combined efforts and talents bring seeds from our fields into your hands.

Thanks to you, too, for being part of our community!

Sarah Kleeger

Bean, Fava, Sweet Lorane
Beet, Kamuolini 2
Broccoli, Red Arrow Purple Sprouting
Flower, Dinner Bells Campanula
Flower, Purple English Frilly Poppy
Herb, White Horehound
Pepper, Sweet, Pointy Kaibi #1
Tomato, Harzfuehr

WE’VE SIGNED THE SAFE SEED PLEDGE:
Agriculture and seeds provide the basis upon which our lives depend. We must protect this foundation as a safe and genetically stable source for future generations. For the benefit of all farmers, gardeners and consumers who want an alternative, we pledge that we do not knowingly buy or sell genetically engineered seeds or plants. The mechanical transfer of genetic material outside of natural reproductive methods and between genera, families or kingdoms poses great biological risks, as well as economic, political and cultural threats. We feel that genetically engineered varieties have been insufficiently tested prior to public release. More research and testing is necessary to further assess the potential risks of genetically engineered seeds. Further, we wish to support agricultural progress that leads to healthier soils, genetically diverse agricultural ecosystems and ultimately healthy people and communities.

ABOUT US
Adaptive Seeds was established in 2009 by Andrew Still and Sarah Kleeger. We are a certified organic, farm based seed company near Sweet Home, Oregon. We steward rare, diverse and resilient seed varieties for ecologically-minded farmers, gardeners and seed savers. Our seed is adapted to the Pacific Northwest and other short season northern climates. We sell only public domain, open pollinated (OP) seed, as well as diverse gene pool mixes. All of our seed is grown by us or a few regional friends who help with isolation needs. If we didn’t grow it, we say who did in the variety description. For more information about our growers, see page 10.

NONE of our seeds are proprietary hybrids (F1), patented, PVP, or genetically modified (GMO). All of our seed is grown without chemical fertilizers, herbicides or pesticides, and none of it is treated. Certified Organic by Oregon Tilth since 2013.

WHY OPEN POLLINATED (OP) & REGIONAL?
Hybrid seeds are beneficial mostly as monocrops. It seems the goal of the corporate produced hybrid is to sever the seed’s relationship to the natural world, and profit from a corrupt short term economic model. We believe proprietary control schemes such as hybrids (F1), patenting, PVP, and trademarking are stifling resilient innovation and diversity. Proprietary hybrids are the single biggest contributor to the erosion of agricultural biodiversity regionally and worldwide.

Open pollination encourages diversity and resilience. It is akin to open source. Unlike hybrids, open pollinated varieties become adapted to the area in which they are grown and have been shown to outperform imported seed. If we are to approach true food freedom, it must rest on a foundation of open pollination.

OPEN SOURCE SEED INITIATIVE
We are thrilled to be able to encourage open access to biodiversity as a partner seed company and participating breeder with the Open Source Seed Initiative (OSSI). OSSI is dedicated to maintaining fair and open access to plant genetic resources worldwide by offering a new way to save and exchange seed that ensures the seed will remain free of patents, licenses, and other restrictions. Varieties that are registered as OSSI seed are accompanied by the pledge (see below), which prohibits the varieties or their derivatives from being patented or licensed in ways that can restrict use. The OSSI Pledge also requires that any subsequent distributions of OSSI seed, or of derivatives bred from OSSI seed, be accompanied by the pledge. In this way, OSSI intends to develop an expanding pool of genetic resources that are available now and in the future for unrestricted use by scientists, farmers, and gardeners. This pledge is a commitment to foster unfettered exchange of germplasm and the freedom to use the material for any purpose, with the single proviso that by accepting the pledge the user commits to allowing others freedom to use the material or derivatives of the material. Varieties listed in our catalog with the OSSI logo have been designated open source by the people who bred them and are registered as OSSI-Pledged seeds. Free the seed!
For more info: osseeds.org

The OSSI Pledge: You have the freedom to use these OSSI-Pledged seeds in any way you choose. In return, you pledge not to restrict others’ use of these seeds or their derivatives by patents or other means, and to include this pledge with any transfer of these seeds or their derivatives.
OUR SEED PRIORITIES

- Rare and heritage varieties
- Oregon and Northwest-bred
- Public domain, modern varieties
- Winter garden varieties
- Open pollinated varieties for commercial growers
- Diverse gene pool mixes and landraces
- Early maturing and northern adapted varieties
- Highly nutritious staple foods

We guarantee that every seed lot we sell is regularly germination tested and has been found to exceed industry and federal germination standards. All Brassica family seed lots have been tested and found negative for blackleg (Phoma lingam) as required by the Oregon Department of Agriculture.

OUR ICON SYSTEM

These icons are designed to help you quickly identify important varietal characteristics. For example, when you see , you will know that the variety has performed well through the winter in our zone 8 (average low of 17°F) garden. We do use row cover for protection when temperatures get below 25°F, but have found many varieties are hardy down to at least 20°F. Similarly, when you see the Market Farm icon , our 10+ years of market farming experience in the Willamette Valley, coupled with customer feedback, informs this selection.

SAP Seed Ambassadors Project introductions or reintroductions to the US.
MP Varieties bred right here in the Pacific Northwest – heritage and modern.
* Ideal for market farm production.
❄ Winter – cold weather hardy to 10-20° F.
❄ Winter – cold weather hardy to 10-20° F.
❄ Winter – cold weather hardy to 10-20° F.
❄ Cut flower – suitable for fresh or dry bouquets.
❄ Certified Organic by Oregon Tilth.
❄ Open Source Seed Initiative (OSSI) pledged varieties.

WHAT IS THE SEED AMBASSADORS PROJECT?

The Seed Ambassadors Project (SAP) began as a small group of Oregon-based seed stewards with the principal goal to increase the diversity of locally adapted varieties in our bioregion and disseminate this resource in order to further local food system durability worldwide. We see locally adapted varieties as the foundation of the durable and resilient local food system that we are helping to create. Adaptive Seeds naturally evolved out of SAP as we found ourselves seeking more ways for our seeds to reach people.

A few of us Ambassadors spent several winters traveling through Europe and Asia sharing seed, collecting and exchanging varieties, and teaching seed saving skills. We have collected over 800 varieties of food plants, most of which were not available in the US when we acquired them. Many are now available in this catalog, and others are grown in our preservation gardens. We also contribute to seed swaps, and teach classes on seed saving, winter gardening, and locally adapted seeds.

Please visit us at: seedambassadors.org

ORGANIC CERTIFICATION

All seed grown on our farm has been Certified Organic since 2013. In 2015, we added the Handler’s scope to our certification, enabling us to sell seed purchased from certified growers as certified organic seed. Now in 2020, all varieties printed in our catalog are Certified Organic. We may occasionally offer non-certified seed on our website, but we will only ever offer seeds that were grown using organic methods. A copy of our current organic certificate can be found on the ‘Our Guarantee’ page of our website: adaptiveseeds.com/our-guarantee

OUR SMALL GROWER NETWORK/COLLABORATORS:
Alan Adesee – Alan grew quality, certified organic seed crops for many years in the Willamette Valley. His farm, Hands On Organics, is located in Junction City, Oregon.

Avoca – Hank Keogh and Jo Erikson primarily grow seed crops on their certified organic farm located outside of Corvallis, Oregon.

Dancing Bear Farm – Steve and Patricia Florin grew organic crops, including seeds, on their farm in Williams, Oregon, since 1998.

Deep Harvest Farm – Nathaniel Talbot and Annie Jesperson farm on Whidbey Island in northwest Washington, producing certified organic seed and vegetables. deepharvestfarm.com

Garlicana – Avram Drucker grows lots of alliums (more garlic varieties than you ever knew existed) and breeds true garlic seed on his farm in Douglas County, Oregon. garlicana.com

Lonesome Whistle Farm – Jeff Broadie farms outside of Eugene, Oregon. Famous locally for his popcorn and grain, which we offer here as seed. lonesomewhistlefarm.com

Moondog’s Farm – Dan Schuler and Shelly Bowerman grow subsistence food crops, leafy greens, and certified organic seed along the Mohawk River in Mabel, Oregon. moondogsfarm.com

Myrtle Creek Farm – Del Blanchard grows certified organic grains, beans, garlic and specialty food crops on his farm in Myrtle Creek, Oregon. myrtlecreekfarm.com

The Organic Farm School – Aaron Varadi manages the fields, teaches the next generation of organic farmers, and grows seed with the school’s Organic Seed Project on Whidbey Island, Washington. organicfarmschool.org

Pitchfork & Crow – Carri Heisler and Jeff Bramlett farm 15 acres of certified organic veggies, fruit, and more for markets in Lebanon, Oregon. pitchforkandcrow.com

Praying Manis Farm – Jim Broniec farms near Canby, Oregon, where he specializes in certified organic winter squash for processing and clover seed.

Seven Seeds Farm – Don Tipping produces certified organic seed primarily for Siskiyou Seeds in Williams, Oregon. siskiyouseeds.com

Sunbow Produce – Yadira Ruiz and Nate Johnson grow certified organic vegetables year-round, plus grains, beans, and more in Philomath, Oregon. sunbowproduce.com

Sunset Lane Farm – Marco Franciosa grows dried flowers, garlic, and herbs for the family’s other business, In The Farm Kitchen Shop, in Brownsville, Oregon. inthefarmkitchenshop.com

Taproot Growers – Jenny and Keegan Caughlin grew certified organic seeds as well as a variety of crops and livestock at the confluence of the McKenzie and Mohawk Rivers in Springfield, Oregon.

Twisp River Seed – Anaka Mines grows certified organic seeds near the Canadian border in Twisp, Washington.

Uprising Organics – Brian Campbell and Crystine Goldberg focus on seed production, trialing and plant breeding in their fields in Lynden, Washington. uprisingorganics.com

Whisper Hollow Farm and Nursery – Willis and Ambere Ransom grow late season blueberries, and collaborate with us on their farm in Brownsville, Oregon. @whisperhollowfarm

Wild Garden Seed – Frank and Karen Morton have been producing and breeding the finest organic seed for quite some time in Philomath, Oregon. wildgardenseed.com

Wolf Gulch Farm – Tom and Maud Powell grow seed crops as well as vegetables for the Siskiyou Sustainable Cooperative multi-farm CSA near Jacksonville, Oregon.

AMARANTH
Amaranthus sp.

GROWING & SEED SAVING BASICS
Sow in pots indoors in April for planting out in May, or direct sow after danger of frost. 12–18” spacing. Harvest for greens at any time; harvest grain when seeds rub off easily in your hand, but before seed head is crispy dry. Windrow or hang over a tarp to dry for several days, then dance, rub, or shake seeds from seed heads. For larger crops, place dry plants on a tarp and drive on it with a vehicle. Winnow to clean or place seeds in a bowl and make a stirring motion with your arm; chaff rises to the top for easy removal. For seed saving, isolate from other amaranths of the same species by ¼ mile.

Amaranth Alliance
Amaranthus sp. Flower/Grain. 65-95 days.

A fun and beautiful way to explore amaranth diversity. Amaranth Alliance contains flower and grain types in a rainbow of colors, with several reds, plus pink, green, bronze, and bicolors in the mix. Very ornamental – a festive backdrop for the garden. Equal parts Copperhead, Coral Fountain, Green Tails, Love Lies Bleeding, Rio San Lorenzo, Rodale Red Leaf Grain, and Sunset Goldlock. All leaves and seeds in this mix are also edible. This is a physical mixture and not a genepool.

1/2 g = 500 seeds, $3.50 1 oz, $36.00
2 g, $6.00 1/4 lb, $60.00
1 oz, $12.00

1/4 oz, $6.00 1 oz, $36.00

Coral Fountain
Amaranthus caudatus. Flower. 65 days.

Coral Fountain is similar to the beloved Love Lies Bleeding amaranth, with its long flowing pendulum type flower heads, but the flowers are a lovely coral-peach color instead of magenta. Plants grow 4-5’ tall with flowers reaching downward to the ground. Makes a great cut flower and also works well in dry arrangements. Combine with Love Lies Bleeding and Green Tails for a rainbow of cascading tassels. Like most A. caudatus species, Coral Fountain yields a delicious edible golden seed that is high in protein.

Aka, Coral Fortains.

1/4 lb, $60.00
1 oz, $36.00
2 g, $6.00 1/4 lb, $60.00
1/4 oz, $12.00

Green Tails
Amaranthus caudatus. Flower. 75 days.

We wanted to change the name to Envy Lies Bleeding because it looks so much like the red variety, Love Lies Bleeding. But, Green Tails it is. Long, lime green flower tassels form on plants that grow 4-5’ tall. When planted in rows it makes a nice backdrop wall to other smaller flowers. Racemes may be cut and used in bouquets or as a dried flower, and combines well with Coral Fountain and Love Lies Bleeding. This species of amaranth is thought to originate in South America and was used by some indigenous peoples for grain and greens.

1/4 lb, $60.00
1 oz, $36.00
2 g, $6.00 1/4 lb, $60.00
1/4 oz, $12.00

Copperhead
Amaranthus caudatus. Flower/Grain. 45 days leaf; 90 grain.

A stunning early maturing variety that grows 4-7’ tall and has light tan, almost golden colored seeds. With its very ornamental, large, orange seed heads, Copperhead will certainly become a focal point in the garden. We love it when staple food crops double as ornamentals. Similar to the classic amaranth variety, Golden Giant but with shorter plants and earlier maturity. We find it to be very reliable for seed production in our bioregion. Amaranth was a staple food crop of the Aztecs; its seeds and leaves are still used in Mexico today.

1/2 g = 500 seeds, $3.50 1 oz, $36.00
2 g, $6.00 1/4 lb, $60.00
1/4 oz, $12.00

1 oz, $36.00
2 g, $6.00 1/4 lb, $60.00
1/4 oz, $12.00
Love Lies Bleeding
*Amaranthus caudatus.* Flower. 65 days.

This popular ornamental has long streaming magenta flowers that are very nice as a long lasting cut flower. Love Lies Bleeding is a great crop in the summer heat and tolerates neglect very well. Yields tan edible seeds with a slight pink hue. Occasionally self seeds and can return through volunteers, however it is not weedy like pigweed. This species of amaranth is thought to originate in South America and was used by some indigenous peoples as a grain staple food.

**Miriah Leaf**
*Amaranthus cruentus.* Leaf. 25-50 days.

A beautiful red-veined green leaf amaranth for salad and cooking. The leaf backs of Miriah Leaf are all red, adding a unique color to salad. A heat tolerant spinach substitute that is popular in Asia and Latin America. Also good cooked or pickled.

**Río San Lorenzo**
*Amaranthus sp.* Flower/Grain. 45 days leaf, 100 grain.

We chose Río San Lorenzo amaranth because of its beautiful marbled seed heads of pink-red and yellow-gold. They are gorgeous and seem to shimmer. Leaves can also be eaten raw when young or cooked like spinach when more mature. Vigorous plants typically grow to 7’ for us, although height may vary from 5-8’ depending on specific growing conditions and latitude. Seed.threshes easily from plants and does not shatter if harvested on time. Harvest for grain when seed feels hard when you bite on it. Be sure to get it before the birds! A traditional grain amaranth from Durango, Mexico.

**Rodale Red Leaf Grain**
*Amaranthus sp.* Flower/Grain/Leaf. 45 days leaf; 90-100 grain.

Our renamed selection from variable material that originally came from the Rodale Institute in the early 1980s, and more recently from seed saver and author Suzanne Ashworth in California with the name Red Leaf Grain. Rodale Red Leaf Grain amaranth is strikingly beautiful with deep red color — one might believe they had planted an ornamental instead of a first-rate food crop. We have selected for early maturing, 4-5’ tall deep-red plants that produce a heavy yield of light tan seeds, perfect for edible grain use. Matures well for us even in extra cool summers. Young leaves had the best flavor raw in our amaranth taste test and make a great addition to salad mix.

**Oeschberg**
*Amaranthus cruentus.* Flower. 70 days.

Oeschberg is an amazing deep purple-red amaranth that is darker than Love Lies Bleeding, but with an upright growth habit. Seed heads are very highly branched and hold their color longer than other varieties, making it great for flower arrangements. Plants are a bit short for an upright amaranth at 4’ tall, which is great in the garden as they won’t shade out everything else. Leaves are edible and a good heat resistant salad green when young — red color develops early. Black seeds are not recommended as grain. May self-seed. Can be succession-sown until the end of July for late-season flower production.

**Sunset Goldlocks**
*Amaranthus sp.* Flower/Grain. 45 days leaf; 90 grain.

Adaptive Seeds Original. Stocky plants grow 4-5’ tall, producing mostly light-gold heads packed with tiny blond seeds. Some beautiful bicolor strawberry blond plants are also part of the gene pool. Sunset Goldlocks is worth growing as an ornamental crop alone. Very early for a grain amaranth. Leaves can also be eaten raw when young or cooked like spinach when more mature. After plants are cut at the base for seed harvest, new leaves may re-sprout, producing even more food! Overall a really great variety. We received it as a variable mix called Sunset Dwarf from Bountiful Gardens, grown at Golden Rule Garden. We selected heavily to eliminate any tall dark red plants and named it Sunset Goldlocks, since it has golden locks, and is not too tall and not too short.

**Beers**
*Phaseolus vulgaris*

Yellow/Tan. 90 days.

Who would have thought that there was an Oregon Coast heirloom dry bean?! We thought it must be good because growing dry beans along the cool, damp Oregon coast is not easy. Not named for the Beers Family folk band of the 1960s, and not because it makes you thirsty, but for Charles and Priscilla Beers who brought the bean from Nebraska to the Oregon Coast in 1895. Though a pairing with the beverage of the same name would probably work out just fine. Beans are a dark tan/yellow color, similar to Arikara, but a little larger, plants are more productive, and a little later to mature — 100 days on the coast, 90 days inland. A multipurpose bean that is good in any bean recipe. Given to us at a seed swap by a woman who had been growing it for many years near Lincoln City, Oregon.

**Growing & Seed Saving Basics**

Direct sow 1” deep May through June in rows that are 1’ apart. Thin seedlings to 3-6’ spacing. Protect early sowings from frost. Stop irrigating in early August. Harvest beans from pods that are fully dry. Shell by hand, by dancing, or by driving on beans spread on a tarp. Winnow to clean. Test for dryness with a hammer — dry beans shatter. Some cross-pollination may occur, but beans mostly self-pollinate. For more info on growing dry beans, check out our blog post at: seedambassadors.org/we-love-growing-dry-beans-you-might-too/

---

**www.adaptriveseeds.com**
Wonderful early, very high yielding dry bean. Pods are mottled with dark blue. Seeds resemble a pinto bean but with blue speckles instead of brown. Excellent tasting as a dry bean, somewhere between a kidney and pinto in flavor. Used in England as a snap bean, but we find it to be only of fair snap bean quality unless very young. Heirloom variety said to be from an 1800s shipwreck on the Isle of Wight in the United Kingdom. Brought back from the brink by Seed Guardian Fred Arnold with the Heritage Seed Library, England. We sourced it during our Seed Ambassadors trip in 2006.

**Tan Speckled. 90 days.**

Cook weather tolerant, small bushes loaded with pods. Stocky bushes yield heavy with small round, dark-red mottled beans. Early enough to mature in England, where it is from. Also very reliable here in Oregon. It was usually the first dry bean we would bring to market in the fall, a week or two before most of the others. Currently our favorite bean for chili and great for most bean dishes. Traditionally grown before 1890 in Warwick, England. Preserved by the Heritage Seed Library, England.  

**Red Speckled. 85 days.**

**A light golden-brown, small dry bean rivaling other beans for early maturity. With its mild and creamy flavor, Nez Perce is a good all-purpose bean and is especially delightful refried. Very reliable and easy to grow in cool summer or short season areas. Short, half-runner bush plants show indeterminate growth but are easily harvested once most of the pods have dried down and do not need a trellis. As the name suggests, it is believed to originate with the Nez Perce tribe in Eastern Oregon and Idaho, however the bean's history with the tribe is uncertain. Similar bean varieties were grown by tribes further east and the seed may have been brought by settlers to the area. Grown in northern Idaho in the 1930s by Henry Marcus Purnell and maintained for decades in Idaho by the Denny Family. Our strain of Nez Perce comes to us from seed savers Aline Crehore and Steve Trimmel, who run a small seed company here in Western Oregon called Green Journey Seeds. Similar to Indian Woman Yellow, but smaller and with a lighter colored seed coat.**

**Nez Perce. 80 days.**

**Tan Speckled. 90 days.**

A favorite throughout the Northeast for baked beans and hearty winter soups. Used in the South as an alternative black-eyed pea. We frequently substitute Kearly Yellow Eye for cannellini beans in our favorite recipe – kale and cannellini. Beans hold their shape when cooked, or can be blended down into a rich and creamy base that is a good dairy-free alternative to heavy cream for use in sauces, soups, and casseroles. Originally developed in Kentville, Nova Scotia, for an early and uniform harvest. Plants are tall and upright and hold their pods off the ground, which is great for either hand or mechanical harvest.  

**4 oz, $7.50**

**1 lb, $14.00**

**5 lbs, $60.00**

**Öland Swedish Brown. 90 days.**

- Small, round brown bean with a mellow flavor. Traditionally used in Swedish sweet and sour bean stew (made with molasses and vinegar), and we enjoy it in Boston baked beans. Brown beans have been a staple in Sweden for hundreds of years. Though they were once grown in several areas of the country, Öland, an island off the south-east coast, is now the only place where they are still grown. Featured in the Slow Food Ark of Taste, we found Öland Swedish Brown in 2010 when we attended Terra Madre in Turin, Italy. For recipes and a complete history, check out the Öland website: oland.se/en/the-swedish-brown-bean

**4 oz, $7.50**

**1 lb, $14.00**

**5 lbs, $60.00**

**Rosso di Lucca. 90 days.**

- Beautiful rosy red, oblong beans with dark stripes and speckles. Said by growers in Italy to have a rich delicious flavor, pairing well with other strong flavors such as garlic, sage and rich fruity olive oil. We agree and love to use it as a replacement for kidney beans. Seed Ambassador Kayla Preece collected this variety in 2006 from Agricoltori Custodi, a seed preservation group in Tuscany, Italy.  

**4 oz, $7.50**

**1 lb, $14.00**

**5 lbs, $60.00**

**Volga German Siberian.**

- A round borlotti/cranberry type. Good dry or as a fresh shelling bean that is early and cold tolerant. Plants are half-runner and somewhat sprawling. We recommend a trellis for small spaces, but plants can be left to sprawl if you have room. Has a classic smooth borlotti bean flavor that makes for an excellent all-purpose bean. The origin of this bean is from German Mennonites who were brought by Catherine the Great to the Volga River region of Russia. The Mennonites were sent there to utilize their agricultural skills to reduce the impact of a famine in Russia. One hundred years later, Russia deported many of the Mennonites or sent them to Siberia. Possibly Andrew's favorite seed variety as he has a special connection to it; his great-grandparents were among those deported from the Volga region—except they landed in Kansas and not Siberia (“Lucky for me!” says Sarah.) We received the seed for this variety from Soren Holt in Denmark.

**4 oz, $7.50**

**1 lb, $14.00**

**5 lbs, $60.00**

**Titus Cannellini. 90 days.**

- Customers at market frequently asked us for cannellini beans and we know why: the pure white beans are delicious and creamy, yet hold their texture well when cooked. They pair amazingly well with our totem vegetable, kale, and shine in minestrone, Sarah’s favorite soup. We had tried growing a few varieties but had always found them too late maturing for our needs.  

**4 oz, $7.50**

**1 lb, $14.00**

**5 lbs, $60.00**

www.adapriveleads.com
Whipple®

Purple Speckled. 95 days.

Whipple is on our short list of favorite bean varieties that are adapted to the Pacific Northwest. Great rich flavor. We think it is especially good in chilli and paired with copious amounts of garlic. Vigorous bush plants may have short runners. The beans themselves resemble Early Warwick but are larger and a darker maroon color. The Whipple Family, for which this bean is named, worked closely with Martin Luther King Jr. before moving to Douglas County, Oregon, in the 1970s. Eventually Whipple dry bean was introduced to local growers and gardeners via seed swaps.

| 1 lb  | $14.00 |
| 4 oz  | $7.50 |

Wolverine’s Orca®

Black and White. 90 days.

Orca / Calypso / Yin Yang beans are so eye-catching people seem to fall in love at first sight. After growing them for a few years, we’re still enamored with these beans. Fat pods and large, round beans are meatier than most dry beans we grow. This strain has been passed on to us through a series of seed stewards, and can be traced back to Secwepemc elder Wolverine William Ignace, who began growing it in the 1980s. In addition to being a dedicated seed saver, Wolverine was a lifelong crusader for indigenous land rights and sovereignty, both internationally and in his native British Columbia, Canada. Into his 80s, Wolverine tended 8 acres of land and through his project, Nourish the Nation, gave away almost the entirety of his harvest to elders in autonomous communities, families, and people defending their traditional territories against devastating extraction projects. Wolverine passed away in 2016. A portion of the proceeds of the sale of this bean will go to support ongoing sovereignty efforts by First Nations people.

| 1/2 oz | 20-30 seeds | $3.50 |
| 1 lb  | $14.00 |
| 4 oz  | $7.50 |

Cupidon®

Phaseolus vulgaris

GROWING & SEED SAVING BASICS

Direct sow 1” deep beginning early May in rows that are 1’ apart. Thin seedlings to 3-6” spacing. Protect early sowings from frost. Succession sowing every 3 weeks through late June will ensure continual harvest. Shell seeds from fully dry pods by hand or by dancing on pods. Winnow to clean. Test for dryness with a hammer – dry beans shatter. Some cross-pollination may occur, but beans mostly self-pollinate.

As vegetable growers we used to be less than excited about filet beans until we found Cupidon. Not only is it the best filet bean we’ve found, it is one of the best beans, period. Delicious, aromatic sweet flavor. High yielding, light green, stringless, long, slender, French filet type pods. Plants can grow to 2’ tall if irrigated and fertilized well, while yielding lots of pods over a long season. Our favorite trait of Cupidon is that the pods are tasty even when they are very large. A good variety for market growers and gardeners as the fruit are held high on the plant for easy harvest. Resistant to Bean Common Mosaic Virus 1. Received our original seed from the wonderful folks at Real Seeds in Port Townsend, Washington.

| 1/2 oz | 55-65 seeds | $3.80 |
| 1 lb  | $14.80 |
| 4 oz  | $7.80 |

Beurre de Rocquencourt®

Phaseolus vulgaris

This delicate yellow wax bean is often the first to mature. Delicious buttery flavor, uniform size and shape for easy processing, and high yields make this a standout bush wax variety. Yellow pods can be picked when small as filet beans for extra tender texture. Plants grow well in cold and wet growing conditions in the beginning of the season, so they are well adapted to northern climates. According to Mother Earth News, “The variety takes its name from Rocquencourt, a town near Versailles. In the 19th and early 20th centuries Rocquencourt was famous for its fine vegetables, so the name carried the connotation of high quality. The bean evolved locally through selection and became fully recognized as a commercial variety in the 1930s.” Thanks for the intel mother Earth News!

| 1 lb  | $14.80 |
| 4 oz  | $7.80 |

Marvel of Piedmont

Speckled Pods. 55 days.

Marvel of Piedmont is a richly flavored, bush Romano type bean. Flat pale green pods are streaked with purple which fades with cooking. Tasty and productive, resembles Dragon Tongue beans but with lighter colored pods that are slightly less speckled. An Italian bean hailing from the Piedmont region in northern Italy, which is the epicenter of the international Slow Food movement.

| 1/2 oz | 35-45 seeds | $3.80 |
| 1 lb  | $14.80 |
| 4 oz  | $7.80 |

Pisarecka Zlutoluske

Yellow Pods. 50 days.

Heirloom wax bean with delicious, round, yellow pods on sturdy plants. Beans can be picked small or large, as the wonderful flavor and nice yellow color develop when the pods are young. Super productive, early maturing, and cold tolerant variety that is perfect for the Pacific Northwest. Probably a Czech variety, the name translates to ‘Yellow Podded from Pisarky.’ It came our way via Seed Dreams in Port Townsend, Washington.

| 1/2 oz | 20-30 seeds | $3.80 |
| 1 lb  | $14.80 |
| 4 oz  | $7.80 |

Marona®

Green Pods. 60 days.

A reliable green early maturing snap bean with long round pods. Early high yields that hold up well once picked. Very tasty tender beans are excellent for direct market sales. Good for summer and autumn rotations and produces well in dry conditions. Marona has everything you need to be a go-to market farm production variety, also perfect for gardeners who want buckets of beans. Resistant to common mosaic virus. We found this variety in Germany at Bingenheimer Saatgut, a biodynamic seed company.

| 1/2 oz | 35-45 seeds | $3.80 |
| 1 lb  | $14.80 |
| 5 lbs | $62.00 |

A multi-purpose variety for both snap and dry bean production. Good yields of 6’ flat green pods that when mature contain beautiful light yellow beans with brown splotches that are also a tasty dry bean. Plants have upright growth habit which make for easy picking and fewer losses from slugs and mold. Bred by the late Robert Lobitz of Paynesville, Minnesota.

| 1/2 oz | 20-30 seeds | $3.80 |
| 1 lb  | $14.80 |
| 4 oz  | $7.80 |

Labrador

Early maturing, and cold productive, early maturing, and cold tolerant variety that is perfect for the Pacific Northwest. Probably a Czech variety, the name translates to ‘Yellow Podded from Pisarky.’ It came our way via Seed Dreams in Port Townsend, Washington.

Robert's Royalty

Purple Pods. 55 days.

Another masterpiece bred by Robert Lobitz! Produces beautiful medium-dark purple pods with great bean flavor. Similar to the variety Royal Burgundy with slightly shorter pods on more prolific and compact plants. Like Royal Burgundy, Robert’s Royalty is early maturing and cool weather tolerant, germinating better in cold soil than most other beans.

Saxa

Green Pods. 50 days.

Early maturing, strong bushes yield heavy with 4-5” green beans. A popular old variety in Germany and the Netherlands. Very tolerant of poor weather and growing conditions. Excellent rich flavor that is missing in many modern varieties. Best picked when pods are young. We obtained this variety from the biodynamic seed company Bingenheimer Saatgut when visiting Germany in 2007.

Wade

Green Pods. 60 days.

A classic dark green, bush snap bean with smooth, round 6-7” long pods. With its high yields and dependability, we recommend this bean as a market farm production variety. Excellent when eaten fresh, frozen, or canned. The pods hold well once picked so they make it to market in good condition. A near predecessor of Provider, with which it shares many positive traits such as good cold soil emergence and cool weather tolerance. Developed in 1952 by Dr. B. L. Wade of the USDA Southeastern Vegetable Breeding Laboratory in Charleston, South Carolina. It was noted for being more prolific than Tendersweet, one of the first widely planted stringless beans, which it was bred to surpass. Resistant to bean common mosaic virus and was an All-American Selections winner in 1952. Long unavailable commercially in the US, we found it at Bingenheimer Saatgut in Germany.

SEED SAVING BASICS

Direct sow 1” deep May through early June in rows that are 1’ apart. Thin seedings to 3-6” spacing. Protect early sowings from frost. Requires trellising; try T-posts and bailing twine or plant a few weeks after corn or sunflowers for a natural trellis. Shell seeds from fully dry pods by hand or by dancing on them. Winnow to clean. Test for dryness with a hammer – dry beans shatter. Some cross-pollination may occur, but beans mostly self-pollinate.

Broughton Astley Polish

Lavender Speckled. 95 days.

Beautiful green speckled purple pods are small but also taste good as a snap bean. Small, round, lavender speckled brown dry beans are so beautiful they’re like jewels. Early and productive. Delicious and very tolerant of cool maritime weather. Given to us by Keith Parkins on our original Seed Ambassadors trip to England in 2007. He told us this type of bean, locally known as “Polish Beans,” had been grown in allotment gardens in his village of Broughton Astley for over 40 years.

Diecimino

Royal Speckled. 90 days.

Slender pods with rosy-red speckled seeds that are good in soups and pasta e fagioli. Highly productive tall climber. Very beautiful and tasty heirloom originally from Tuscany. We have been growing it for over 10 years and with each harvest we fall in love all over again because it’s just so pretty. Then we eat some and remember the beauty isn’t just skin deep: Diecimino is delicious too! Another variety preserved by Agricultori Custodi, located in Tuscany, Italy, and collected by Seed Ambassador Kayla Preece.

O'Driscoll

Tan with Purple Speckles. 90 days.

We are always on the lookout for short season adapted dry beans and O'Driscoll is one of the best pole beans in this category. We discovered how great O’Driscoll performs early in our Seed Ambassadors Project variety trials and after trialing several hundred more varieties of beans, O’Driscoll is still one of the best. A rounded, egg shaped bean with beautiful, gray-lavender color and deep purple speckles. The flavor is rich with a texture almost like new potatoes. Very tolerant of cool weather and very early maturing for a pole bean. Pods set early and fairly low on moderately tall vines. The flat, green pods flecked with purple are suitable as a snap bean when young. A true heirloom from the O’Driscoll family in England. Our original source was the Heritage Seed Library, England, in 2007.

Poletschka

Black. 90 days.

One of our favorite pole dry beans! Early and prolific in our Pacific Northwest climate. Best as a dry bean, but also can be used as a shelling or snap bean when young. These little round beans are a very pretty, shiny black. We sourced it from the Heritage Seed Library in England who received it as a family heirloom from Irma Jacyna, from the western Ukrainian village of Kostilinyk. We would like to thank Turtle Tree Seeds for turning us on to this great bean.

Gold Nectar

Semi-Flat Yellow Pods. 70 days.

Yellow/wax bean yields lots of crunchy beans with excellent sweet and beany flavor. The 9” long straight pods are 1/2” wide with a semi-flat shape. Anne Berblinger of Gales Meadow Farm in Forest Grove, Oregon, says about Gold Nectar, “We have been searching for a yellow pole bean with outstanding flavor. This one is it.” Starts fairly early and produces tender beans until late in the season, drying down seed very slowly. This trait is great for delicious snap beans but is a challenge for our seed production. We collected this variety at a seed swap in Belgium; unfortunately we don’t know much about its history, although it might be related to the variety Neckargold.

Oregon Giant Spun Green Pods. 65 days.

This is the bean that introduced us to dual-purpose beans. We like to cook pods when they are big and still juicy, although at that point they have strings like a traditional string bean. Also tasty when smaller and stringless, but with a much milder flavor. Can be used as (huge) fresh shelling beans and/or for dry beans. Pods shed off a fair amount of rain when drying down. Plants tolerate shade and cold wet weather very well. Most famous for being a commercial bean grown for the canning industry from the 1930s through 1970s and recently appeared to be lost. Our ‘genuine’ strain comes from local seed saver Louise Nivison in Foster, Oregon who had been saving them for decades.

1/2 oz ≈ 20-30 seeds, $3.80
4 oz, $7.80
1 lb, $18.00

Scalzo Italian

Flat Green Pods. 65 days.

This is a Pole Romano type bean with a slight curve to the pod. Large, 7-8” flat beans are stringless and extremely tasty – Scalzo Italian is one of the best snap beans we have ever tasted. Plump, rose-colored seeds make it functional as a dual-purpose fresh and dry bean. We received seed for this bean as a wedding favor in 2011 from a longtime friend. The Montesano family has been growing Scalzo Italian in Sheep Ranch, Calaveras County, California for decades.

1/2 oz ≈ 20-30 seeds, $3.80
4 oz, $7.80
1 lb, $18.00

Trebona Romano

Flat Green Pods. 60 days.

If you are tired of waiting for your pole beans to mature but still wish to grow pole beans because of their season-long production and excellent flavor, look no further. This is a great productive and early green bean with long, flat Romano type pods and large, white seeds that are also good eaten shelled. Our most consistently productive bean, early and throughout the season – just one reason our customers give it rave reviews. Great flavor, too! We received this from Christina Henatsch, a breeder for Bingenheimer Saatgut, a biodynamic seed company in Germany who recommends it for greenhouse production. Who knew?

1/2 oz ≈ 30-40 seeds, $3.80
1 lb, $18.00
4 oz, $7.80
5 lbs, $70.00

BEANS, FAVA
Vicia faba

GROWING & SEED SAVING BASICS

Direct sow 2” deep mid-September to late October, or February to March for spring sowings. Plant 8” apart in rows spaced 1’ apart. Fava’s don’t do well in the heat; late spring through summer plantings are not recommended. Harvest seed from pods that are fully dry. Shell by hand or by dancing on the dry pods, winnow to clean. Test for dryness with a hammer – dry beans shatter, moist beans squash. Once seeds are clean and dry, freeze to kill weevils. Fava beans cross-pollinate; isolate from other varieties by a minimum of a ¼ mile to guarantee seed purity.

Aprovecho Select

The legendary fava! The biggest fava bean seed we have ever seen and the taste is delicious. The giant plants yield heavily with pods containing four big green seeds each. The young leaves and shoots also make a delicious salad green. Nearly lost forever, or at least from commerce, this fava bean is one of the best and it was difficult tracking it down. We searched for years and found only two people that had any seed left. These last two sources were our friends Taylor Zeigler of Eugene, Oregon and Heike-Marie Eubanks of Myrtle Point, Oregon, two paragons of the PNW. We received these seeds from Ianto Evans at Aprovecho Research Center in Cottage Grove, Oregon. Both Ianto and Aprovecho are pillars of the permaculture and appropriate technology movement. It is a delight to have this fava bean in our catalog.

2 oz ≈ 30 seeds, $3.80
1 oz ≈ 50 seeds, $3.50

1 lb, $9.80
4 oz, $6.80
5 lbs, $30.00

Sweet Lorane

Back for 2020! Small seeded fava are usually relegated to cover crop status, but Sweet Lorane was selected to have good, sweet flavor, so it’s an excellent choice for a dual-purpose crop to feed both the soil and the gardener. The flavor is excellent and is especially delicious in fava hummus. Usually sown in autumn for cover cropping and for higher yields, favas may also be spring sown. Extremely winter hardy – we have seen this variety muster through winter temps of 0°F with only a few inches of snow for protection. When grown as a dry bean, Sweet Lorane is less prone to splitting during harvest and processing than the larger seeded types. Bred by Steve Solomon in the 1980s and re-selected more recently by Alan Adesse right here in the Willamette Valley of Oregon. Seed produced by Lonesome Whistle Farm in Junction City, Oregon.

1 oz ≈ 50 seeds, $3.80
1 lb, $9.80
4 oz, $6.80
5 lbs, $30.00

Adzuki, Hokkaido

Vigna angularis. Red. 90 days.

Back for 2020! The earliest adzuki bean we have found. We had almost given up on adzuki beans and then entered Hokkaido. It makes sense because the Japanese island of Hokkaido is at a similar latitude as Oregon. Short bushy plants produce long slender pods that can hold many little red beans. Produces in two flushes. The second round of pods can weather wet Septembers without melting or molding. The result is beans that are in good shape once harvested and dried in October. Adzuki beans are great cooked and mixed into rice or made into one of the many delicious red bean desserts. Very digestible and very nutritious.

1/4 oz = 50 seeds, $3.50
2 oz, $7.50

Cowpea, Fast Lady Northern Southern Pea
Vigna unguiculata. White. 65 days fresh, 90 dry.

An excellent, productive, early variety of white seeded cowpea. Beans have a creamy texture and do not require soaking before cooking. Pods are solid and hold well above the ground on compact upright bushes so they can take some wet weather and not succumb to mold. Beautiful yellow flowers that pollinators go nuts for – but not to pollinate. Instead, they seem to drink the plant’s nectar at the base of the closed flower. Our crops have two good
flushes of pods. The early pods hold until the later ones are ready, making this bean extra productive and easy to harvest. Bred by Carol Deppe who selected it to thrive in our cool Oregon summers. It can also handle the heat of summer that is increasingly becoming our norm.

1/4 oz ≈ 55 seeds, $3.50
2 oz, $7.50

**Cowpea, Grey Speckled Palaype**

_Vigna sinensis_. Grey Speckled. 75 days fresh, 95 dry.

We have tried growing many varieties of cowpea/black-eyed pea/crowder pea through the years and had never experienced a harvest worth writing about until 2014 when we gave Grey Speckled Palaype a try and finally, a cowpea worthy of praise in our growing conditions! Sometimes you just gotta keep trying. Short, somewhat viney plants are very productive with long pods. Beans are flavorful dried and can be eaten fresh as well. Early and tolerant of cool weather. Pods shed a few early rains and thresh easily. Originally from a market in Palapye, Botswana.

1/4 lb ≈ 60 seeds, $3.50
1/2 lb, $15.00
2 oz, $7.50

**Garbanzo, Black Sicilian**

_Cicer arietinum_. Black. Garbanzo beans are also known as chickpeas or ceci in Italian. This Sicilian variation, _ceci neri_, is similar to the more common Black Kaboulli garbanzo. Germinates easily in cool soil. Large, bushy plants produce well and are ready to harvest before the rains in autumn. Flavor is similar to the tan types but a bit nuttier and can be used in any recipe that calls for garbanzo beans. Black chickpeas are common in India where they are made into salad or _channa masala_; in Italy they are cooked with pasta or made into creamy soups. We would like to thank Lane Selman of the Culinary Breeding Network for bringing this one back from Italy and sharing it with us. Now we can share it with you.

1/2 oz ≈ 55 seeds, $3.50
2 oz, $7.50
1 lb, $20.00

**Garbanzo, Golden Dragon**

_Cicer arietinum_. Orange/Tan. A strain of Desi-type chickpea given to us by local staple food activist, Krishna Khalsa, via Harry Mac Cormack, who told us, "reportedly it gives those who eat it the power of the dragon." Smallish, orange/tan seeds cook up nicely and are very versatile in the kitchen. The Desi-type of chickpeas are usually smaller and darker than other types and have a rougher coat. This type is used to make _chana dal_, which is a split chickpea dish with the skin removed. They can also be cooked up whole like dry beans and added to soups, salads and curries. Sow by the end of May for beans to dry down by early September. Plant architecture is tall enough that it can be direct combined if grown on a large scale. Seed produced by Sunbow Produce in Corvallis, Oregon.

1/2 oz ≈ 55 seeds, $3.50
1/2 lb, $12.00
2 oz, $7.50
1 lb, $20.00

**Garbanzo, Pico Pardal**

_Cicer arietinum_. Tan. This chickpea is from León, an autonomous community in northwestern Spain, where chickpeas have been a staple food since Roman times. Pico Pardal is small seeded with a pronounced beak. It is aptly named; Pico Pardal translates as "Sparrow Beak." Creamy consistency, thin skin, cooks up fast and bakes well. If given plenty of space, the bushes can become quite large and produce many small (2-bean) pods. Pico Pardal Garbanzo was recently the subject of a lawsuit in its home region. A food packer trademarked the name in 1998 and sought to restrict its usage; in 2015 the Promotional Association for Pico Pardal Garbanzo de León won the removal of the trademark because it is a traditional type that is widely grown in the region. ¡Viva las semillas! We sourced this variety from Paco Villalonga Lochridge, a Seed Savers Exchange member in Spain.

1/2 lb, $12.00
2 oz, $7.50
1 lb, $20.00

**Mung Bean, Kali Black Gram**

_Vigna mungo_. Black. 80 days.

Very interesting black seeded mung bean relative. Commonly consumed in India and Nepal as a protein rich staple. Mung beans are often used in a similar way to red lentils, such as in _dal makhani_. The flour has a sticky texture when cooked making it useful for flat breads like _masala dosa_. The small furry plants have yellow flowers and yield early even in Oregon. This strain of black gram was obtained by Anpetu Oihankesni of Sourcepoint Organic Seeds. He sourced it in Bhaktapur, a UNESCO World Heritage Site located in the Kathmandu Valley of Nepal.

1/4 oz ≈ 120 seeds, $3.50
4 oz, $10.00
2 oz, $7.50

**Runner, British Pop**

_Phaseolus coccineus_. Mix. 70-90 days.

Adaptive Seeds Original. A genetically diverse population of edible-pod type runner beans from the British Isles. We have loved growing runner beans from across the pond for some time now and with so many good ones in our trials, we decided to let the best coalesce into one big British Pop mix. Our favorites in this crossed-up mix are Tenderstar, Prizewinner, White Emergo, and Polestar. We have selected for vigor, yield, long pods, and a diversity of seed coat color—a rainbow of lavender pastels, black, white, tan, and speckles that are hard to describe. While the long and tender green pods are the main crop for this variety, the fresh shelled and dry beans themselves are also delicious. Since they are more tolerant of cooler weather conditions than common beans, they may grow back as a “perennial vegetable” if the ground doesn’t freeze too deeply in winter.

1 oz ≈ 20 seeds, $3.80
4 oz, $6.80

**Runner, Moldovanesti Buffalo**

_Phaseolus coccineus_. White. 90-100 days.

Extremely productive and easy to hand harvest, these 8’ tall plants produce tons of delicious, large, white beans. White flowers are edible, and beans are edible when young as large green beans or when mature as dry beans. But we think they are best as fresh shelling beans. White runner beans go by many names throughout the world and are an unsung delicacy, deserving a wider audience. Referred to as Butter Beans in England and sometimes Potato Beans in the United States. Buffalo Bean is a common name for white runner beans in Romania, where water buffalo are still used as draft animals. We collected this variety in February of 2008 while visiting the village of Moldovanesti, in Transylvania, Romania, where we saw many water buffalo. Transylvania is known for having some of the northernmost water buffalo. During this Seed Ambassadors trip, we discussed seed saving and biodiversity with many traditional farmers, and were blown away by the beauty of the region and the quality of the old varieties still produced by subsistence growers there.

1 oz ≈ 20 seeds, $3.80
4 oz, $6.80

**Tepary, Sacaton Brown**

_Phaseolus acutifolius_. Orange-Tan. 85 days.

Tepary beans are small, flat beans, traditionally grown by Native Americans in the desert Southwest. Amazingly drought and heat tolerant, they prefer sandy alkaline soils, but Sacaton Brown performs very well for us even in our relatively heavy, acidic soil and cool climate. Tepary beans have more protein and higher fiber than common beans, and maintain their shape when cooked. This variety comes to us via Native Seeds/SEARCH, who says it is commercially cultivated by the Gila River Indian Community where it is known as S’oam bawi.

1/4 oz ≈ 55 seeds, $3.50
1 lb, $20.00
2 oz, $7.50
**BEETS**

*Beta vulgaris*

Growing seed for beets and chard (*Beta vulgaris*) is challenging in our Oregon location due to its role as the global epicenter of GMO sugar beet seed production. All *Beta* seed lots that we sell were produced in isolated areas, far, far away from potential contamination.

**GROWING & SEED SAVING BASICS**

Direct sow March through early August in rows that are 1’ apart. Thin to 3” spacing once they’re 3” tall. Don’t forget to eat the greens! For us, beets can grow through the winter without protection, but must be sown by August for this purpose. Collect seeds from 20+ plants in second year once seeds have dried down, usually by September. Cut seed heads, place on tarps, dry a few more days, then dance on the dry plants to free seed. Collect seeds from pile, winnow to clean. Isolate from other beets and chard by 1 mile.

**Chioggia**

Round Pink/White Rings. 65 days.

In our days as market growers, Chioggia beets were by far our customers’ favorite, and we loved them too. Dark pink on the outside, the inside features concentric rings of pink and white. The candy cane like appearance is as pretty as it is fun. But Chioggia charms the palate, too – much sweeter than red beets, with less of the “earthy” flavor that turns some people off to this nutritious root vegetable. Winter Chioggia beets are just about as sweet as candy. Plus, they don’t bleed as much as red beets when cooked, although the stripes do fade. Very good simply roasted with a little olive oil and salt. Green leaves. Heirloom variety whose original red-striped variety whose leaves have much better flavor. Our friend Avram Drucker of Garlicana, who stewarded this variety for many years, says, “If I had to pick only one [beet] variety for homesteading, there’s just no question that this is it.” Lutz Green Leaf is claimed by most, to be “not a pretty beet,” but we disagree, finding it to be quite pretty and amazingly sweet as well. Light green leaves are especially tasty for beet greens, and are good when young in salads or cooked up like chard when more mature. Word is roots stay tender even when very large (up to 1 lb!) – I can’t imagine any beet being pretty at that size. Lutz Green Leaf has won us over. Seed produced by Uprising Organics in Lynden, Washington.

**Kamuolini 2**

Round Red. 65 days.

Back for 2020! Vibrant color, beautiful round shape and classic sweet beet flavor make this variety our ideal beet. Vigorous leaf growth makes this beet two vegetables in one, easy to pull and perfect to tie in bunches. Leaf stems have an intriguing magenta-purplish tint. In our trials against the overly common Red Ace F1 hybrid we found Kamuolini 2 to have better shape, flavor, yield, color, and taller tops. The Baltic region is a center of beet diversity and one of its centers of origin, so it makes good sense that we would find our ideal beet in Lithuania. Bred by and given to The Seed Ambassadors Project by Dr. Rasa Karkliene, a vegetable seed breeder at the Lithuanian Institute of Horticulture. Seed produced by Moondog’s Farm in Mabel, Oregon.

**Lutz Green Leaf**

Round Red. 70-90 days.

An old standby winter storage beet with vibrant red roots and pale green leaves. Some Lutz strains commonly available have red leaves and stems – we are offering the original green-stemmed variety whose leaves have much better flavor. Our friend Avram Drucker of Garlicana, who stewarded this variety for many years, says, “If I had to pick only one [beet] variety for homesteading, there’s just no question that this is it.” Lutz Green Leaf is claimed by most, to be “not a pretty beet,” but we disagree, finding it to be quite pretty and amazingly sweet as well. Light green leaves are especially tasty for beet greens, and are good when young in salads or cooked up like chard when more mature. Word is roots stay tender even when very large (up to 1 lb!) – I can’t imagine any beet being pretty at that size. Lutz Green Leaf has won us over. Seed produced by Uprising Organics in Lynden, Washington.

**Nutribud**

55-70 days.

A great open pollinated broccoli bred in Oregon by plant breeder Dr. Alan Kapuler of Peace Seeds. This is the broccoli to grow for flavor. The sweetest, richest and possibly the most nutritious broccoli for spring and fall. Deep-green florets, central head and prolific side shoots make this an excellent variety for the home gardener.

**Touchstone Gold**

Round Golden. 55 days.

NEW for 2020! Touchstone Gold beets are vibrant orange on the outside with a golden yellow interior and green leaves. Color holds well through cooking and doesn’t bleed or stain as with traditional red varieties. Flavor is delightfuly sweet and not overly earthy. Touchstone gold is an improved variety of gold beet developed by Alf Christianson Seed Company, selected for higher germination and uniformity. Years ago we used to grow this variety for our winter CSA and farmers market booth. They make a wonderful tricolor beet bunch when combined with Chioggia and red beets. When we were offered seed for this variety by our friends at Deep Harvest Farm we just couldn’t pass it up. Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

**GROWING & SEED SAVING BASICS**

Sow indoors in flats with good potting soil February through July. Transplant into the garden about 3-4 weeks after sprouting, spaced 12-18” on center. May also be direct sown. A good choice for autumn gardens in our area. Collect seed from 50 or more early spring-sown plants when pods are dry. Dance on seed stalks on a tarp to thresh. Collect seeds and winnow to clean. Isolate from other Brassicas of the same species, *B. oleracea*, by ½ mile.

**Blue Star Gai Lan**

45-60 days.

Our favorite variety of Chinese broccoli chosen from trials that included eight contestants. We like Blue Star’s moderately thick stems, incredible flavor, and easy-to-grow nature. Small plants send up stems up to 1” thick, with small broccoli-like clusters on top. Due to the small stature, Gai Lan should be grown at tighter spacing than standard broccoli varieties. We recommend 2-4” spacing in row. There are many tropically adapted varieties of Chinese broccoli and, unlike those, Blue Star was very happy in our temperate northern climate. The flavor is robust, somewhere between broccoli and collard greens. An essential and loved vegetable in many culinary traditions, Gai Lan deserves a spot in every garden. In Thailand, where it is known as *kana*, we have seen it served in *pad see ew* street noodles and stir fry. Also commonly found in Chinese, Vietnamese and Burmese cuisine. Gai Lan is also known as Chinese kale. *Seed produced by Deep Harvest Farm, on Whidbey Island, Washington."

**Nutribud**

55-70 days.

Piracicaba 🌶️

55 days.

A heat-tolerant, small heading broccoli similar to broccoliini. Where it really shines is not in its initial small head, but in the endless tasty side shoot production. The leaves are as delicious as the tender green heads and sweet stems. Unique to the world of broccoli varieties, Piracicaba’s small shoots and loose florets make it seem like it could be the primordial ancestor of modern supermarket hybrid broccoli. Though originally from subtropical Brazil, we have found that it thrives in our temperate environment and tolerates some frost. Vegetable farmer Carolina Lees of Corvus Landing Farm located on the coast of Oregon, says that Piracicaba is one of her favorite crops for her cool summers, and her farmer’s market customers love it, too. Originally bred by the University of Piracicaba in Brazil. Seed produced by Twisp River Seed in Twisp, Washington.

Red Arrow Purple Sprouting 🌶️

210-240 days.

Back for 2020! Overwintering purple sprouting broccoli (PSB) is one of the most special treats for mild winter climate zones. Along with overwintering cauliflower, PSB is a superb food source during the hunger gap of March – April (at least for those of us whose winters do not usually drop below 15°F). With clusters of vibrant purple broccoli florets that re-sprout for multiple harvests, these big plants are quite impressive. We have trialed many varieties of PSB and Red Arrow has been our favorite for winter hardiness and reliability, even beating the hybrids. Early maturing for a PSB, they sometimes begin sprouting in late February when winters are mild. Days to maturity are variable depending on when the seed is sown, but plants will produce in the spring with just about any summer sowing date. We sow early to mid-summer for nice, big plants. In areas with harsher winters, plants sown in late summer will be smaller and therefore often overwinter more successfully. Planting in the summer for harvest the following spring may seem like a long wait, but it is well worth it. We originally sourced this strain in England, where PSB originated as a specialty crop. Recipient of the United Kingdom’s Royal Horticultural Society Award of Garden Merit and we believe they know good PSB when they see it. Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

1/4 oz, $12.50

Umpqua 🌶️

50-70 days.

With its sublime excellent blue-green color, Umpqua looks delicious even from a distance. The robust plants produce 6-8’ heads, and have good side shoot production. Early to size up from spring planting yet resists premature bolting. Beautiful and stress tolerant, especially for an open pollinated variety. This spring and fall broccoli was bred by Tim Peters of Peters Seed and Research in Oregon. Seed produced by Uprising Organics in Lynden, Washington.

1/4 g ~ 75 seeds, $3.80

Darkmar 21 🌶️

One of the most reliable, easy-to-grow open pollinated Brussels sprout varieties out there. Firm, sweet, dark green sprouts form on plants that grow to 3½’. We trialed every open pollinated Brussels sprout we could find; Darkmar 21 was the obvious mid-season choice because of its consistent large sprout production and vigor in the field. A classic Brussels sprout variety that is popular in the UK but not widely available in the US. Originally selected in Bedfordshire, England. Aka, Bedford Darkmar 21.

1/2 g ~ 150 seeds, $3.80
1 oz, $12.50
2 g, $7.00
1/4 lb, $60.00
1 oz, $28.00
1/4 oz, $12.50

Red Bull 🌶️

Vigorous 3’ plants form 1-2’ sprouts in fall and winter when transplanted into the field May to early June. Sweet, nutty flavor especially after frost when the plants turn a deeper red. Sprouts stay red when cooked. In our opinion, one of the few good open pollinated red Brussels sprouts. Very hardy and far superior to Rubine, though there is some variability in plant color, sprout size and formation. Late to mature. When planted in May, sprouts are ready for harvest December through February. Originally sourced from Tozer’s seed company in England, we thank Pitchfork & Crow for their continued stewardship of this variety. Seed produced by Pitchfork & Crow in Lebanon, Oregon.

1/2 g ~ 150 seeds, $3.80
1 oz, $28.00
2 g, $7.00
1/4 lb, $60.00
1 oz, $28.00
1/4 oz, $12.50

CABBAGE 

Brassica oleracea

GROWING & SEED SAVING BASICS

Sow indoors in flats with good potting soil April through early June, for sprouts in November through February. Transplant into the garden about 3-4 weeks after emergence. For optimal sprout production, pinch growth tip off in late August. Harvest sprouts after autumn frost and as needed throughout the winter. Collect seeds from 50 or more plants (to avoid inbreeding) in the second year when pods are dry. Dance on seed stalks on a tarp to thresh. Collect seeds and winnow to clean. Isolate from other B. oleracea by ½ mile.

Sow outdoors after all danger of frost.

Aka, Bedford Darkmar 21.

1/2 g ~ 150 seeds, $3.80
1 oz, $12.50
2 g, $7.00
1/4 lb, $60.00
1 oz, $28.00
1/4 oz, $12.50

AMARANTH 🌶️

75-90 days.

Gorgeous, early, dark red cabbage with dense, compact heads. Good crunchy and juicy texture. Outer leaves have a lovely silver shimmer that seems to deter aphids, helping this variety to perform well even under high summer temperatures that typically stress out other Brassicas. A good selection for early and main season cropping, does best when planted out by mid-June but can be planted until mid-July for full sized

GROWING & SEED SAVING BASICS

Sow indoors in flats with good potting soil February through July. Transplant into the garden about 3-4 weeks after sprouting. May also be direct sown. Collect seeds from 50 or more plants (to avoid inbreeding) in the second year when pods are dry. Dance on seed stalks on a tarp to thresh. Winnow to clean. Isolate from other B. oleracea by ½ mile.

1/4 oz, $12.50
2 g, $7.00
2 oz, $50.00

Chiiftain Savoy
90-120 days.

A great open pollinated Savoy cabbage that was once a standard and is now very hard to find. Great for late summer and autumn rotations. More tender and sweet than many of the modern European Savoy hybrids, though not as winter hardy. Produces vibrant green heads that average 4-6 lbs. A 1938 All American Selections award winner bred by Ferry-Morse. Our original seed was given to us by Tim Peters, formerly of Peters Seed and Research, who preserved the variety when the big companies dropped it. We are excited to grow it and keep it alive.

1/2 g = 150 seeds, $3.80
1/4 oz, $12.50
2 g, $7.00
2 oz, $50.00

January King
160-210 days.

January King certainly reigns supreme amongst winter cabbages. Beautiful purplish plants form light green winter savoy type heads with purple outer leaves. When growing for our winter CSA, we relied on this variety for its firm, semi-flat, well-filled, 3-5 lb heads from January into March. We sourced several strains with a lot of variability between sources but found a clear winner in the West Coast Seeds selection which overwintered under row cover and a good covering of snow. It also survived our exceptional 5°F lows in 2013. We also preferred its vigor, uniformity, shape and color over other strains. Plant out in early July for fantastic cabbage all winter long (through zone 7); William Woys Weaver, located in Pennsylvania, says he sows in January for early summer harvest. 

1/2 g = 150 seeds, $3.80
1/4 oz, $12.50
2 g, $7.00
2 oz, $50.00

Primax
60 days.

Our all-time favorite summer cabbage. Primax dependably produces firm, round, pale green heads that range in size from 2-4 lbs – just the right size for our kitchen. We also love it because it manages to be both crisp and tender at the same time, and it holds well in the field. This variety is an old standby but has become hard to find in recent years as the seed industry has transitioned towards hybrids. We thank our friend and mentor John Navazio for supplying some of our seed stock! Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

1/2 g = 150 seeds, $3.80
1/4 oz, $12.50
2 g, $7.00
2 oz, $50.00

Winter King Savoy
120-180 days.

Large, dark green heads have that classic savoy crinkled texture and sweeten up nicely after frost. We like to eat savoy cabbage stir-fried or simply braised in butter. The thicker outer leaves make great cabbage rolls. During our winter CSA days we became obsessed with cold hardy cabbage. After trialing dozens of varieties, Andrew noticed that most open pollinated savoy cabbage was not super winter hardy. These mostly Italian, savoy types grew great in the fall but not through winter. After many disappointments, we zeroed in on northern adapted savoy types, of which Winter King Savoy is an exemplar. An excellent English heritage variety that fits in right here in Oregon. Fully green and more savoyed, it is also a good companion to the other super winter hardy cabbage we love, January King.

1/2 g = 150 seeds, $3.80
2 g, $7.00
1/2 lb, $25.00
1/4 oz, $12.50

CARDOON
Cynara cardunculus

GROWING & SEED SAVING BASICS
Sow 2–3 seeds in 4” pots indoors February through April. Thin down to single strongest seedling. Plant out to 18-24” centers in spring to early summer. Make sure not to place other plants too close as cardoons can reach 3'-4 wide. Plant in a permanent position since this perennial grows back each spring. Seeds are produced in the second year and are ready when flowers are dried and downy. Wear gloves and use a brick to smash seed heads to remove seed. Winnow to clean. Isolate from other cardoons and artichokes by ½ mile.

Argenté de Genéve Inerme
Perennial in zones 7-10.

Closely related to the artichoke, this stem vegetable is sown in spring, blanched with cardboard in fall, and then used steamed or raw in salads. Large, silver, slightly spiny leaves produce purple thistle-like flowers that reach 6’ tall. Pollinators love it. Heirloom originally from the Grosjean family in Chêne-Bougeries, Switzerland. We received it from Pro Specie Rara, the Swiss seed saving organization.

3 g = 60 seeds, $3.80
9 g, $6.80

CARROT
Daucus carota

GROWING & SEED SAVING BASICS
Direct sow 2-4 seeds per inch in rows 6-12” apart. April through late July. Keep moist to ensure good germination, which may take up to 3 weeks. Thin to 2” spacing for large roots. Flavor sweetens after frost. A great choice for winter gardens. Seed saving is not recommended in locations where Queen Anne’s Lace (wild carrot) is present. Collect seeds from at least 20 plants in their second year. Cut seed head when seeds are dry, remove seeds by hand or by dancing. Winnow or screen to clean. Isolate from other carrots and wild carrot by ½ mile.

Hilmar/Nantais 2
60 days.

This nantes type carrot is an excellent open pollinated competitor for the hybrids. Delicious, juicy crunch and sweet, mild flavor make it great for fresh eating. Very uniform for an open pollinated variety with bright orange color and good tip fill. Makes attractive carrot bunches at market. Good for spring through autumn production. Not a winter storage type, but they keep well for months in the refrigerator or root cellar. Another bang dunk variety from German seed company, Hild. Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

1/2 g = 300 seeds, $3.80
1 oz, $12.00
3 g, $6.80
2 oz, $28.00

Red Core Chantenay
70 days.

The ultimate carrot for winter cultivation and storage. Wide shoulders, dense flesh, and solid carrot flavor make it a preferred variety for processing and great for bulk and/or wholesale as the poundage adds up quickly. Grows well in heavy soil, strong tops and wedge shape make for easy harvest. This variety still wins taste tests over all the fancy hybrids out there, but don’t expect the sugary watery-ness of Nantes type carrots (which do have their place, don’t get me wrong); instead the complex carrot flavor and crisp texture will have you wax poetic: “Once upon a toothsome day, I ate a Red Core Chantenay.” Crunch! Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

1/2 g = 300 seeds, $3.80
1/2 oz, $12.00
3 g, $6.80
2 oz, $28.00

www.adappriveseeds.com
CAULIFLOWER
Brassica oleracea

GROWING & SEED SAVING BASICS
Sow indoors in flats with good potting soil June through late July for harvest February through March. Transplant into the garden about 3-4 weeks after sprouting. May also be direct sown. Not for summer production, but a great choice for winter gardens in our area. Collect seeds from 50 or more plants (to avoid inbreeding) in second year when pods are dry. Dance on seed stalks on a tarp to thresh. Collect seeds and winnow to clean. Isolate from other B. oleracea by ½ mile.

Prestige
200+ days.

Overwintering cauliflower is one of the best kept secrets of the vegetable world. So tasty and so productive, it comes on right when it is needed during the spring hunger gap. Living in the Pacific Northwest, which is one of the few places on the planet where it can be easily grown, there is no excuse to not give it a try. Prestige, like other overwintering cauliflower, has a sweet nutty flavor superior to any summer cauliflower. We like to refer to it as the cashew of the PNW garden. Over the years we have trialed a dozen overwintering cauliflower varieties and Prestige is our favorite. It is the most reliable and produces the highest quality heads. All overwintering cauliflower prefers a maritime climate with winters that do not typically drop below 15°F. Sow in the summer for spring harvest of light-white heads from April through May, it is definitely worth the wait! We are proud to source our seed from our friends at Uprising and we thank them for producing this valuable variety. Seed produced by Uprising Organics in Lynden, Washington.

1/4 g = 75 seeds, $3.80
1 g, $6.80
1 oz, $40.00

Purple Cape
200+ days.

This overwintering purple cauliflower is another great crop for the hunger gap of late spring. When sown in June or July, it produces deep purple heads the following February through March. Produces much larger heads and more food than overwintering purple sprouting broccoli, and we are so happy to be able to offer it! Delicious and beautiful. Hardy to zone 7, this extreme selection (5% survivors) made it through lows of 2°F in December 2013 and had further selection in the 2016 and 2018 growing seasons. A staple of the Pitchfork & Crow winter CSA, Purple Cape seed has become hard to find in recent years. Seed produced by Pitchfork & Crow in Lebanon, Oregon.

1/4 g = 75 seeds, $3.80
1 g, $6.80
1/4 oz, $12.50
1 oz, $15.80

CELERIAC & CELERY
Apium graveolens

GROWING & SEED SAVING BASICS
Sow in pots indoors March through April. Germination in 2-3 weeks. Transplant in fertile soil when plants are 3” tall, to 4-8” centers for celery leaf and 12” centers for celeriac/celery. Keep well fertilized, watered, and cultivated. Harvest as needed. Collect seeds in second year from 15 or more plants for replanting or culinary use. Cut seed stalks when seeds are dry, thresh by hand, dancing, or hitting seed stalk against sides of a bucket. Winnow to clean. Isolate from other A. graveolens by at least ¼ mile.

Celeriac, Tellus
110 days.

A great old-fashioned celeriac from England. These big, vigorous roots are a little darker than modern varieties both inside and out, and the leaf stalks have a reddish color. Most modern celeriac has been bred to have a bright white interior, which is better for looks. Unfortunately, the volatile compounds that give off such a delightful flavor also stain brown when cut. Tellus is a really delicious heritage variety with a true celeriac flavor because it has not had the flavor bred out of it. Winter hardy down to about 25°F. We sourced it originally from the Heritage Seed Library in England.

1/4 g = 1,000 seeds, $3.80
1 g, $6.80
1 oz, $40.00

Celeriac, Ventura
80-100 days.

The classic American celery! An improved Tall Utah type, Ventura celery is named after the town Andrew grew up in. When he was a kid riding his bike around Ventura, California, he saw many fields of celery growing interspersed with strawberry fields and lemon orchards. Once one of the most common workhorse celery varieties, Ventura has recently become less common and has undeservedly been eclipsed by proprietary celery varieties. Ventura is productive and perfect for market farms and home gardens alike. It has great sweet flavor with that delicious celery crunch. We find celery tastes better when grown organically, giving it more of that celery zing – especially when given lots of fertility and water. Winter hardy down to about 20°F. Good fusarium and bolt resistance. Seed produced by Pitchfork & Crow in Lebanon, Oregon.

1/4 g = 1,000 seeds, $3.80
1 g, $6.80
1/4 oz, $12.50
1 oz, $15.80

Celery Leaf, Chai Thai
50-70 days.

An Asian type that is similar to Chinese celery, but from Thailand. Chai Thai celery has long stems with strongly flavored large, jagged leaves that have a nice golden-green color. Asian celery is often used as a flavoring herb in stews, soups and stir fry dishes. The thin stems are rather different than the thick-stemmed celery most Americans are used to. The flavorful leaves are the primary parts of the plant used – almost like celery flavored parsley. In Thailand, celery is one of the more common herbs used in cooking. We have found that Chai Thai grows well when planted in summer for fall harvest and thrives in cool weather. Early spring sowings are likely to bolt, we recommend succession sowing. We were sent this variety from Thailand by Sarah’s dad, who lived there for almost 20 years.

1/4 g = 1,000 seeds, $3.80
1 g, $9.00
1 oz, $60.00

Celery Leaf, White Queen
70 days.

Bright-green, aromatic leaves atop long, skinny, white stems. White Queen a stark visual contrast from the classic celery stem celery. Thrives in cool fall weather, overwinters easily, and sometimes grows back vigorously as a second and third year perennial. This leaf celery is a Chinese variety with a strong flavor that is used more as an herb than a vegetable. Perfect for Chinese food recipes that include both stems and leaves. Strong flavors are a great addition to stir fry, soups, and Thai dishes that call for celery leaf. The unique white stems make as a captivating addition to market displays. White Queen is a celebration of biodiversity within the celery family.

1/4 g = 1,000 seeds, $3.80
1 g, $9.00
1 oz, $35.00

Bringing Biodiversity Back 31
CHARD  
Beta vulgaris

**GROWING & SEED SAVING BASICS**
Seed in flats or direct sow March through early August in rows that are 1’ apart. Thin to 1’ spacing for bunching, or 4” for salad size plants. In our area, chard can grow through the winter without protection, but should be planted out in August for this purpose. Collect seeds from 20 or more plants in second year once they have dried down, usually September. Cut seed heads, place on tarp, dry a few more days, then dance to free seed. Collect seeds from pile, winnow to clean. Isolate from *B. vulgaris* by 1 mile.

**Rainbow**  
30 days baby, 60 full.

This selection of Rainbow chard is a show stopper in the garden, at farmer’s market, and on the table. Vibrant colors range from dark red, through the spectrum to hot pink, orange, yellow, and white. Leaves can be incorporated raw into salads when young or cooked when older. Cold tolerance makes chard a great winter garden candidate, and it is more productive and tastier than kale in the summer, which is the reason it can always be found in our small kitchen garden. Deborah Madison’s cookbook, *Vegetable Literacy*, has a few recipes that made us fall in love with chard stems as their own, has a few recipes that made us fall in love with chard stems as their own. Literacy

**Chichory & Radicchio**  
*Cichorium intybus*

**GROWING & SEED SAVING BASICS**
Sow indoors with good potting soil February through September. Transplant into the garden 3-4 weeks after sprouting. In our area, chichory can grow through the winter without protection but is best when sown in June or July for this purpose. Alternatively, direct sow March through August. Collect seeds from 10 or more plants in second year when seeds have dried down. Cut whole plants, place on tarp, then dance and stomp to free the seed. Or place dry plants on tarp and drive on them. Screen and winnow to clean. Isolate from other *Cichorium* sp. by ½ mile.

**Chicory, Grumolo Rosso**  
Rosette type. 60 days.

Red Grumolo type chicory, cold hardy and beautiful. Forms a beautiful rosette in winter through spring that is so pretty it could be used as a boutonniere. Also great harvested young for salad mix and as cut-and-come-again loose leaves. Shari Sirkin of Dancing Roots Farm in Troutdale, Oregon, tells us it has relentless regrowth when harvested for loose leaf production. She loves it! Slightly bitter tasting, the bitterness of the species is greatly reduced by frosts, soaking in cold water, a quick blanching or with light cooking. Great cooked in risotto. One of our most cold hardy winter greens. Seed produced by Wolf Gulch Farm in Southern Oregon.

3 g ≈ 100 seeds, $3.50  
1 oz, $12.50  
1/2 oz, $9.50

**Chicory, Sugarloaf Borca**  
Sugarloaf type. 80 days.

Tall, green romaine-like “loafs” are sweet and crunchy. Usually hardy here in the Pacific Northwest all winter long, although temperatures below 20°F may damage heads. The Borca selection has had much better consistency and hardiness for us in our trials than other strains of sugarloaf. It became a staple crop for our winter CSA. Every year we look forward to winter sugarloaf salads. We also love to cook it in soups, risotto, polenta or wheat berry salad. Sugarloaf is not an endive but a true chicory and is also known as Pan di Zucchero in Italy, and Zukerhut in Germany.

1/2 g = 200 seeds, $3.50  
1/4 oz, $12.00  
2 g, $6.00  
1 oz, $36.00

**Radicchio, Trieste Sweet**  
Rosette type. 35 days leaf; 60 head.

Trieste Sweet is a cut-and-come-again chicory that is usually broadcast sown, and harvested at baby leaf stage for use in salad mixes. Known for regrowth after harvest. Young leaves are smooth with round tips, thin stems that have almost no ribbing, and a mild sweet flavor that is great for raw eating. If left to grow to medium size, the plants resemble floppy boutonnieres, and when larger they develop into something like a loose sugarloaf type head. Flavor remains mild no matter what size but is sweetest when young. We were most impressed with Trieste Sweet during the winter of 2013, when plants bounced back after lows of 5°F without protection. Years later we still had plants from this trial sprouting back from the root, indicating Trieste Sweet might have perennial tendencies if ground is left untilled. A definite win if you love salad chicory as much as we do!

1/2 g = 200 seeds, $3.50  
1/4 oz, $12.00  
2 g, $6.00  
1 oz, $36.00

**Radicchio, Variegata di Castelfranco**  
Loose heading type. 70 days.

Chicories are becoming more popular in the Pacific Northwest with castelfranco and sugarloaf leading the charge. Why? Because they’re delicious! Variegata di Castelfranco is a big heading chicory with lots of bright colors, mostly green with red speckling. If planted in July or early August, it will head up for winter. If planted late, it can still be harvested as a loose head. If dug and forced, it creates a beautiful white and pink head similar to radicchio. A winter CSA staple because it is hardier than most other *Cichorium* varieties. Another great variety for winter salads or used in risotto.

1/2 g = 200 seeds, $3.50  
1/4 oz, $12.00  
2 g, $6.00  
1 oz, $36.00

**Radicchio, Rossa di Verona Arca**  
Round heading type. 75 days.

An outstanding selection of a solid heading radicchio with a 4-6” tall, elongated shape. Deep red/purple leaves with broad white mid-ribs are nice and crunchy with the tangy bitterness that radicchio is known for. We loved this variety for our winter CSA, as the tight wrapping on the heads meant that even when outer leaves were damaged from extreme cold, there was still a marketable head just a few leaves down. Also great harvested young as a loose head or for salad mix as cut-and-come-again greens. Seed produced by Fork & Crow in Lebanon, Oregon.

1/2 g = 200 seeds, $3.50  
1/4 oz, $12.00  
2 g, $6.00  
1 oz, $36.00

**Radicchio, Treviso Mesola**  
Tall heading type. 80 days.

Large heads have a deep red leaf color with crunchy white midribs. We have trialed dozens of radicchio varieties over the years and Treviso Mesola is a standout. Italians have many wonderful song-like names for vegetables. This variety is sometimes referred to by its long name, Radicchio Treviso Precoce Mesola. ‘Treviso’, meaning the tall elliptic radicchio types originating in Treviso, Italy. ‘Precoce’, meaning early maturing or...
Precocious, and ‘Mesola’ is the selection name made by the Italian seed company T & T. The superb flavor of radicchio’s fresh bittersweet zing combines amazingly well with grated hard cheese, vinaigrette and the classic Italian salty anchovy. Bitter taste becomes much more mild when first soaked in cold water before serving or when lightly cooked and added to a dish like risotto. Sow in July for October harvest. Later plantings are often successful due to this variety’s strong frost resistance, but may not head up as well.

1/2 g ≈ 200 seeds, $3.50  
2 g, $6.00  
1 oz, $36.00 

Radicchio, Variegata di Chioggia

Round heading type. 75 days.

Another standout from our extensive radicchio trials. Best for fall and early winter harvest. Heads are slightly variable in shape and size but all have a nice red-pink and white variegation, lacking the green of Castelfranco and Luisa types. Large, round heads (think iceberg lettuce) are beautiful and the flavor is delicious, somewhere between the sweeter Castelfranco and the stronger flavored Rosso di Chioggia. According to Italian historical accounts, Variegata di Chioggia was selected out from a cross with Castelfranco and then the much redder Rosso di Chioggia was selected from Variegata di Chioggia. Originating near Chioggia, Italy.

1/2 g = 200 seeds, $3.50  
2 g, $6.00 

Candy Mountain

Sweet. 70-80 days.  
An early-mid season open pollinated, yellow sweet corn, with mixed sugar enhanced (SE) and normal sugary (SU) kernels. This combo gives Candy Mountain a rich flavor that is sweeter than “old timey” corn but not as sweet as most modern corn. The SE trait will keep this corn sweet for a few days after picking. Selected in Montana from the classic 1978 hybrid Kandy Korn. The original hybrid is known for its great cool soil emergence and early season vigor. We found Candy Mountain to have similar characteristics and it definitely grows well in our western Oregon climate with good early maturity. As with most open pollinated corn, there is some pleasant variation but we are selecting for 7" long cobs with 12 rows of rich yellow SE kernels. Short plants have a burgundy tinge to the husks and leaves which is very beautiful in the field. We thank Seeds Trust for making this variety available.

1 1/2 oz ≈ 200 seeds, $3.80  
1 oz, $28.00

5 lbs, $125.00 

Cascade Ruby-Gold

Flint. 85 days.  
This has become the corn of legends. Perfect for our taste buds and Pacific Northwest climate, it is difficult to describe without sounding overzealous. Not only does this variety produce the tastiest corn and comreal we have ever tried, but it was bred just across the valley from us by our friend Carol Deppe in Corvallis, Oregon. An 8-12 row flint corn related to Abenaki and Byron flint. It brings the best traits from both combining the general awesomeness of Abenaki minus the pale yellow ears, and from Byron, the wonderful gold-orange color and excellent husk coverage. Ears are smaller than Abenaki. Thrown in some more genius selection by Carol and you get a flint corn that makes bright gold polenta with pretty red flecks that quickly becomes a hot seller at market. Each plant will produce one of many options of single color ears ranging from bright-yellow, maple-gold, red-orange to deepest red. Separate out the colors for cooking and get a range of delicious and distinct flavors from one crop. Find out more in Carol’s book The Resilient Gardener (see page 146).

2 oz ≈ 200 seeds, $3.80  
8 oz, $14.00  
1 lb, $71.30  
5 lbs, $75.30 

Dakota Black

Popcorn. 90 days.  
One of the earliest maturing and easiest to grow popcorns. 6-8” ears on 6’ tall plants. Dark black kernels have a ruby-red, glassy shine when held in the right angle of light. The pointy kernels pop bright white with a small black hull still attached. The flavor is delicious, hearty and crunchy. Many popcorns lack this richness, which gives Dakota Black the ability to act as a meal all by itself. Developed by the Podolls of Prairie Road Organic Farm, seed growers in North Dakota. Aka, Dakota Black Pop. Seed produced by Lonesome Whistle Farm in Junction City, Oregon.

2 oz ≈ 200 seeds, $3.80  
8 oz, $14.00  
1 lb, $22.00  
5 lbs, $95.00 

Mandan Parching Lavender

Popcorn. 70-80 days.  
Produces short little 4” plants that are extremely early to mature. Small, plump ears are a gorgeous silvery lavender. If you’ve ever had trouble maturing corn in a short season climate, Mandan Parching Lavender is for you. Highly recommended by Carol Deppe for parching, which entails dry roasting on a skillet until the kernels crack/pop like corn nuts, only they taste much better. Also good ground into flour and used for making rich cakes and cornbread. One of the traditional

5 lbs, $75.30  
1 lb, $31.30  
2 oz, $9.80 

Early Pink Pearl

Popcorn. 90 days.  
Early maturing, high yielding, very tasty, and with a range of captivating pink colors to boost! Early Pink Pearl is the perfect complement to Dakota Black. The 4-6” ears are very ornamental and range from dark purple-pink to a light pink pearl tone. Easily matures in our climate. Petite popped kernels are a very light yellow with a mild flavor, not as hearty tasting as Dakota Black but more flavor than store-bought yellow popcorn. Selected from an early pink variety originally grown by Lonesome Whistle Farm in Oregon.

2 oz ≈ 200 seeds, $3.80  
8 oz, $14.00  
1 lb, $22.00  
5 lbs, $95.00  

Double Red

Sweet. 85 days.  
A superb addition to the list of cool purple vegetables. Normal sugary (SU) kernels are sweet and richly flavored, but the real coup of Double Red is the ridiculously dark red color. The kernels are so red that they can turn your fingers purple when eating it. Certainly a culinary necessity for those of us trying to “eat the rainbow.” Red hue varies a little from ear to ear with many so dark red they seem almost black-purple. This rare color in sweet corn comes from the anthocyanin pigments that are also seen in the plant’s leaves. A natural source of anti-oxidants, anthocyanins are also anti-inflammatory. Plants are 5-7” tall with 1-2 ears per stalk. We have heard that when dried and ground, it makes a delicious purple corn bread, but we eat them all fresh and haven’t tried this yet. Using traditional plant breeding methods, Double Red was bred by Dr. Alan Kapuler of Peace Seeds in Corvallis, Oregon. It is the culmination of 25 years of breeding work by Peace Seeds and 8 years of collaboration with Dylana Kapuler and Mario DiBenedetto of Peace Seedlings.

1 oz ≈ 160 seeds, $3.80  
4 oz, $9.80

native corns grown along the Missouri River in North Dakota. Aka, Mandan Red Clay. Seed produced by Avoca in Corvallis, Oregon. 2 oz = 200 seeds, $3.80 1 lb, $21.00 8 oz, $11.80 5 lbs, $80.00

**New Mama Super Sweet**
Super Sweet. 80-90 days.

Adaptive Seeds Original. One of the first open pollinated super sweet (Sh2) corns! Medium-large ears have yellow, truly super sweet kernels, and hold their flavor once picked. Still a little variable in maturity and color with some pale yellow kernels, but we think this may be necessary to maintain vigor as corn does poorly with inbreeding. Selected from crosses made between a Tim Peters super sweet called White Sugar and an early release yellow super sweet from Friedemann Ebner of Sativa in Rheinau in Switzerland. Because Andrew borrowed so much from Tim and Friedemann, who themselves borrowed so much from the corn breeders before them, he almost called this one “Borrowed Tune.” That name didn’t quite ring true, though. And then called this one “Borrowed Tune.” That name didn’t quite ring true, though. And then called this one “Borrowed Tune.” That name didn’t quite ring true, though. And then called this one “Borrowed Tune.” That name didn’t quite ring true, though. And then called this one “Borrowed Tune.” That name didn’t quite ring true, though. And then called this one “Borrowed Tune.” That name didn’t quite ring true, though.

**Saskatoon White**
Flint. 70-80 days.

The earliest dry corn we have ever grown. Reliable and delicious, although not high yielding. We consider it our fail safe insurance corn crop for cold years when late spring rains prevent planting and/or early fall rains set in. Very short plants have one or two small, slender ears of mostly glassy white kernels. Occasionally produces red and orange colored cobs. Tastes fantastic when made into hoecakes or arepas, a corn cake from Colombia and Venezuela. May be related to Saskatchewan White and certainly originated in Canada. We received our strain from Tim Peters of Peters Seed and Research in 2005, is not sure of its origin.

**Open Oak Party Mix**
Flinty Dent. 90-100 days.

Adaptive Seeds Original. Our main crop field corn that we grow for cornmeal, flour and for making masa. Open Oak Party Mix is the best corn we offer for nixtamalization and making your own hominy. Oak Party Mix is currently being included in research trials by Oregon State University’s Dry Farm Collaborative. They are growing and researching multiple varieties under dry farm (non-irrigated) conditions and the results for Open Oak Party mix are very promising so far. 2 oz = 200 seeds, $3.80 1 lb, $17.30 8 oz, $10.80 5 lbs, $75.30

**Mideast Peace**
C. sativus. Slicing. 50-60 days.

Middle Eastern/Mediterranean type cucumber – bright green skin, smooth, mild flavor – with amazing sweet flavor, texture, productivity and appearance. Nobody needs to grow the American type of cucumber – dark-green, bumpy, prone to bitterness – when there are delicious gems like this. Thin skin is remarkably tender yet durable. The 6-7” cucumbers can be harvested small for pickling or sized up for salad and slicing. Early production and prolific even in cool weather. One interesting trait of Middle Eastern types is that they keep very well and taste great even when the skin gets a little wrinkled. A selection developed by Dr. Alan Kapuler of Peace Seeds in Corvallis, Oregon. 1 g = 30 seeds, $3.50 3 g, $6.50 1 oz, $15.00 4 oz, $40.00 1/2 oz, $12.50

**Jamaican Burr Gherkin**
C. anguria. Gherkin. 65 days.

A rare and unique cucumber relative originating in West Africa and brought to Jamaica via the trans-Atlantic slave trade in the 1500s. It has remained a popular vegetable in Jamaica. Jamaican Burr Gherkin is a member of what are often called West Indian Burr gherkins. Earlier and more productive than the common strain. The 1-2” long, light green fruit is covered with soft, spine-like bumps giving it its unique look. Best eaten when small and young, before filling up with seeds. With a mild, slightly tangy flavor and a pleasing crunch, burr gherkins are fantastic pickled, cooked in stews and stir fry, and also raw. Very versatile, they can be used like cucumbers or cooked like squash. Even though the fruit is small, plants are unbelievably productive, out producing every other cucumber we have grown. More resistant to disease and insects than cucumbers and squash. Grow similarly to cucumbers, however the vines can grow up to 8’ and love to climb up trellises.

8 oz, $14.00 1 oz, $7.50 1 g = 140 seeds, $6.50 1 oz, $27.00

**Vermont Flint, Garland Flint, Italian Polenta and several unnamed dent varieties from a University of Wisconsin breeding project for nutrition. This is a diverse population, still purposely variable. Open Oak Party Mix is currently being included in research trials by Oregon State University’s Dry Farm Collaborative. They are growing and researching multiple varieties under dry farm (non-irrigated) conditions and the results for Open Oak Party mix are very promising so far.**

**Addis Pickle**
C. sativus. Pickling. 55 days.

Pickling type that is also great for fresh eating. This variety was so productive, Sarah ate one almost every day for lunch from the single (under-watered) plant in the kitchen garden from late July into September. Dark green with white spines, 5-7” cylindrical fruit are good for processing. Bred in 1976 by R.L. Lower of North Carolina State University to have resistance to powdery mildew, downy mildew, anthracnose, and angular leaf spot. It is interesting that a southern bred cucumber performs so well in the Pacific Northwest, but it seems to be very widely adapted.

**CUCUMBER**
*Cucumis sp.*

**Growing & Seed Saving Basics**
Sow indoors in 2” pots with good potting soil May to mid June. Two weeks after sprouting, transplant to 2’ spacing in 6’ rows. May also be direct sown when soil is warm. Young cucumber plants benefit from floating row cover to protect them from insects and frost. To save seeds, scoop out seeds when the fruit is bloated like a yellow blimp. Leave in bucket and allow to ferment for a few days. Rinse and let seeds dry. Winnow to clean further if needed. Isolate from other varieties of the same species by at least ½ mile.
**Poinsett 76**

*S. barbadense* . Slicing. 60-70 days.

There’s no need for hybrid cucumbers with wonderful varieties like this around! Dark green skinned, 7-8” long fruit are juicy, crunchy, and sweet. The yield is remarkable and we highly recommend it for organic farm production or for anyone who wants boxes full of classic slicing cucumbers. An excellent variety from Dr. Henry M. Munger, one of the great public plant breeders of the 20th century. It was cooperatively released in 1976 by the Clemson, Virginia, Agriculture Experiment Station and Cornell. Originally selected to be resistant to anthracnose, angular leaf spot, downy mildew, powdery mildew, spider mites and scab. We thank Southern Exposure Seed Exchange for bringing this variety to our attention.

1 g = 30 seeds, $3.50
1 oz, $15.00
3 g, $6.50
4 oz, $40.00
1/2 oz, $10.50

**Tortarello Abruzzese Bianco**

*C. melo*. Armenian Slicing. 65 days.

Light-green, ridged cucumber-like fruit are prolific with a mild flavor that is never bitter. Thin skin does not need to be peeled. Known commonly as Armenian cucumbers in North America. Tortarello Abruzzese Bianco produces high yields and one-of-a-kind style. When sliced, ridges on the surface produce pretty cross sections that look like flowers with petals. What more could you ask for? Armenian cucumbers are actually the same species as cantaloupe and other melons, and when very ripe the fruit take on an orange hue and have a light melon aroma. Best eaten when 12” or shorter, but can grow 2’ or longer. May be trellised for straighter fruit, but the very long vines will grow without complaint on the ground as well. This variety is an Italian strain from Abruzzi on the Adriatic coast.

1 g = 30 seeds, $3.50
1 oz, $15.00
3 g, $6.50
4 oz, $40.00
1/2 oz, $10.50

**True Lemon**

*C. sativus*. Slicing. 65 days.

Let’s get this out of the way right now: I love lemon cucumbers. I like all cucumbers, but lemon cucumbers are the only cucumbers I love. Let me count the ways: They are crisp and delicious, and in addition to being the size, shape, and color of a lemon, mature fruit have a really nice lemony flavor. Their skin isn’t thick and waxy, so no need to peel. They are to (my experience) burpless and never bitter. They are the absolute perfect size for snacking, and also slice up great for sandwiches or pickles. Because the fruit is not the same color as the foliage, they are easier to see when harvesting. A little late to start, but they stay productive later than the slicers and pickles. Disease resistant. Best eaten before they turn yellow. This is one of those varieties that isn’t rare, but is so perfect we have to carry it in our catalog (perhaps we are also motivated by our desire to have a few month’s worth of unending eating supply). Heirloom originally introduced in 1894. Seed produced by Seven Seeds Farm in Williams, Oregon. Heirloom originally introduced in 1894.

1 g = 30 seeds, $3.50
1 oz, $12.50
3 g, $6.50
1/4 lb, $37.70

**White Heron**

*C. sativus*. Slicing. 50-60 days.

NEW for 2020! White Heron slicing cucumbers are similar to True Lemon but with a classic slicer shape and lighter white color. Fruit are best harvested under 5” long, when their thin skin is still tender making peeling unnecessary. Cucumbers do come with black spines that are easily wiped off. We like to harvest them when the stem end of the fruit just starts to turn pale yellow. Also good for pickles when harvested even smaller. Highly productive and great taste, too. Said to have some resistance to downy mildew. A family heirloom variety originally from Seed Savers Exchange member Keith Herron of New York, and introduced commercially in 2017 by our friends at Southern Exposure Seed Exchange. Founded in 1997.

1 g = 30 seeds, $3.50
1 oz, $15.00
3 g, $6.50
4 oz, $40.00
1/2 oz, $10.50

**Eggplant**

*Solanum* sp.

GROWING & SEED SAVING BASICS Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well watered. Up pot seedlings into 4” pots when they have their first two true leaves. Transplant into the garden after danger of frost has passed, typically late May in western Oregon. Collect seeds from fruit that are past harvest stage, ripened to a dull yellowish color. Place seeds in small jar, add water. Decant to clean. Dry. For seed purity, isolate from other eggplant by 500 feet.

**Astrakon**

*S. melongena*. Purple. 60 days.

Astrakon is possibly the best eggplant for short season climates or for those who struggle to get the larger fruited types to produce well. Deep purple, elongated teardrop-shaped fruit are smaller and a bit earlier than Diamond. Compact plants produce lots of medium-small (about 4” long) fruit, perfect for folks who like cute smaller eggplant. Very attractive on a plate when sliced in half lengthwise and roasted. Small plants grow to about 2’, making this variety very suitable for container growing. Originating from one of the many Soviet era breeding programs and was named after the Russian city of Astrakhan, located on the Volga River. It was introduced to North American growers by Belorusian seed saver Andrey Baranovsky.

 Packet = 30 seeds, $3.50
1/4 oz = 1,500 seeds, $30.00
Large packet = 200 seeds, $6.50

**Diamond**

*S. melongena*. Black. 65-70 days.

Excellent standard eggplant for high yield and quality in organic growing conditions. Nice, elongated black globes are a little smaller than the hybrids but better suited for northern climates. Fairly short plants set fruit in clusters and produce well in less than optimal conditions. Diamond was our farm’s preferred variety for market and CSA. Brought to this country by the Seed Savers Exchange from Ukraine in 1993.

 Packet = 30 seeds, $3.50
1/4 oz = 1,500 seeds, $30.00
Large packet = 200 seeds, $6.50

**Tsakoniki**

*S. melongena*. Purple and White Striped. 75 days.

Purple with white streaks, this oblong eggplant is shaped somewhere between Italian and Japanese types. Tsakoniki is a Greek eggplant variety from the town of Leonidio where they have an annual festival celebrating this amazing vegetable, which is renowned for its delicate, sweet flavor and tender skin. In order for fruit of this variety to be marketed in Europe by this name, it must come from Leonidio (Controlled Designation of Origin). In addition to being a name for a fabulous eggplant, Tsakoniki is a reference to the Tsakonian language, which derives from the ancient Doric dialect. As a result, local dialect still spoken in the world, it is critically endangered with only a few hundred speakers remaining.

 Packet = 30 seeds, $3.50
1/4 oz = 1,500 seeds, $30.00
Large packet = 200 seeds, $6.50

Bringing Biodiversity Back
Cichorium endivia

**Escarole, Pancalieri a Costa Bianca**

60-70 days.

A vigorous Italian endive with large heads. The leaves are long with frilly edges and great flavor. Thick, crunchy, and juicy leaf stem and midribs is what Pancalieri a Costa Bianca is about. We find it performs great in the summer heat but it’s not nearly as sweet. Cold hardy heads can partially self blanch and tying them up results in very white endive. Harvested in the fall and winter, we enjoy it raw as one of our favorite additions to salad. Considered a traditional rustic endive in Italy.

1 g = 500 seeds, $3.50
3 g = $6.00
1 oz = $30.00
1/4 lb = $100.00
1 oz, 1/4 lb

**Escarole, Ascolana**

60-70 days.

Super hardy escarole for winter and spring production. Dark green heads with curly edged semi-broad leaves that have a similar shape to Schiana but not as wide as Diva. Ascolana has the ability to obtain a very large size and keeps very well once harvested. When fully sized up the heart self-blanches nicely. From a late July sowing it can be harvested from December through February.

1 g = 500 seeds, $3.50
3 g = $6.00
1 oz = $30.00
1/4 lb = $100.00
1 oz, 1/4 lb

**Escarole, Cardoncella Barese**

55-65 days.

Sweet dandelion greens! A variety distinct from other escaroles, as leaves are long and serrated like a giant dandelion green. Tall leaves can reach 18” long. When we were market farmers, we offered them by the bunch as ‘sweet dandelion greens’ with rave reviews from our CSA members. Most Italian dandelion greens are of the chicory species but this is not. Its endive nature lends Cardoncella Barese a delightfully sweet flavor lacking in most chicory (though there is still a mild bitterness). Surprisingly winter hardy. Great all year-round. Slow to bolt, however it will benefit from succession sowing as it is an annual. Italian regional specialty originally from Bari in Apulia, Italy. Translated, the name means ‘little cardoon.’ Produces many side branches when bolting, and these stems are a nice crunchy, mildly bitter vegetable in their own right, like a celtuce of the escarole world or a lazy person’s puntarelle. Much better and easier to grow than cardoon in our opinion, but nothing against cardoon!

1 g = 500 seeds, $3.50
3 g = $6.00
1 oz = $30.00
1/4 lb = $100.00
1 oz, 1/4 lb

**Escarole, Diva**

60-70 days.

A delicious hardy escarole from Italy that has a unique leaf shape compared to other escaroles. Leaves are more strap shaped and not as wide as varieties like Diva. This narrower leaf makes Diva a fantastic choice for salad mix and braising greens. Flavor is sweet with a slight walnut-like hint of aspartic common in escarole. We have said many times that escarole is one of our favorite fall and winter foods and Schiana is fantastic! Also known as Paparegna, this variety is originally from the province of Naples, recognized as being grown in the Agro Nocerino Sarnese, the same protected geographical region of production as the San Marzano tomato. It is also an essential ingredient in pizza escarole.

1 g = 500 seeds, $3.50
3 g = $6.00
1 oz, 1/4 lb

**Escarole, Schiana**

60-70 days.

Impressive, vigorous, and uniform, this escarole is great in spring and autumn. Firm, crunchy, juicy and sweet with a light nutty bitterness unique to escarole. Escarole type escaroles truly shine in late fall through early winter. When sown in late summer, Cornet de la Loire will head up and make a tight blanched heart which resembles sugarloaf chicory, or a stocky romaine lettuce heart. It is beautiful and tastes wonderful. When spring sown, it does not head up but instead produces wavy, bright-green leaves perfect for salad mix. Touted as an improved selection of Cornet de Anjou, Cornet de la Loire is certainly an excellent escarole. The Loire River valley is famous not only for its escarole, but also for its wine production. We acquired this variety through a fascinating relay-race-like journey from France to Italy, and maybe Canada, and then to Oregon. The whole story cannot be fully shared due to the intrigue involved. However, we want to thank Myrtha Zierock and Lane Selman for their crucial roles in helping us get this gem!

1 g = 500 seeds, $3.50
3 g = $6.00
1 oz, 1/4 lb

**Escarole, Loire**

70 days.

Broad-leaved Batavian type endive. Large, loose, green heads are a delicious addition to salad and also good braised or sautéed. Mild even in summer heat, its flavor develops to perfection in the late summer or autumn once nighttime temperatures cool. Diva’s broad leaves are sugary sweet with a tiny hint of bitterness; imagine juicy, sweet walnuts. In our winter CSA trials, we found it to hold quality through our harshest winters. Also makes delicious, large heads from spring plantings. It is an awesome escarole and a serious market farm performer. Foundation seed originally sourced from German biodynamic seed company, Bingenheimer Saatgut.

1 g = 500 seeds, $3.50
3 g = $6.00
1 oz, 1/4 lb

**Escarole, Cornet de la Loire**

70 days.

Impressive, vigorous, and uniform, this escarole is great in spring and autumn. Firm, crunchy, juicy and sweet with a light nutty bitterness unique to escarole. Escarole type escaroles truly shine in late fall through early winter. When sown in late summer, Cornet de la Loire will head up and make a tight blanched heart which resembles sugarloaf chicory, or a stocky romaine lettuce heart. It is beautiful and tastes wonderful. 1 g = 500 seeds, $3.50
3 g = $6.00
1 oz, 1/4 lb

fennel flavor to dishes or salads. Unique compared to other bulb type fennel, some plants have a perennial nature.

\[
\begin{align*}
1/2 \text{ g} & = 100 \text{ seeds}, \$3.80 \\
2 \text{ g} & = \$6.80 \\
1/4 \text{ oz} & = \$9.80
\end{align*}
\]

GROWING & SEED SAVING BASICS
Sow indoors in flats with good potting soil March through early July. Transplant into the garden once plants have 3 true leaves. May also be direct sown. We recommend 12” spacing. Seed saving from bulb type fennel can be challenging, as plants need a very long season and are not necessarily winter hardy in our region. If possible, save seed from at least 30 plants to avoid inbreeding. For seed purity, isolate by ½ mile from other varieties, including wild fennel.

Mantovano

75 days.

A superior bulb/Florence fennel that placed very high out of 14 fennel varieties in the 2015 Northern Organic Vegetable Improvement Collaborative (NOVIC) taste tests. Bulbs mature in about 75 days from spring sowing but can also be summer planted for fall harvest. Bulbs hold in the field for weeks – they seem to just get fatter the longer they are in the ground. Mantovano is great when young and tender, but we really like it at its full-grown size when we cook it in just about everything: It may be blasphemous to some but fennel can be a fun substitute for onions in many dishes. When sliced thinly, the texture is similar and the flavor can be a nice change for those of us who don’t love onions, like Sarah.

Selma Fino

80 days.

Another stellar bulb/Florence fennel with an excellent sweet anise-like flavor that mellows with cooking. In organic farm trials throughout western Oregon, Selma Fino is usually the sweetest tasting. Takes about 80 days to form full-sized bulbs, however it can be harvested sooner at a smaller size. Very white bulbs are fairly uniform and won’t prematurely bolt if planted in spring. Tops can be used as a fresh herb, adding a mellow taste buds get confused. This mostly uniform gene pool resembles a dark green monster mustard. Selected from a cross between Hornd and Mike mustards. Seed produced by Deep Harvest Farm, on late summer 2020.

Mizspoona

Salad Select

B. rapa. 20 days baby, 40 days full.

Mizuna and Tatsoi are some of our favorite mustard family salad greens. Combine the two and you get Mizspoona and the awesomeness increases exponentially! Very mild mustard flavor is delicious when eaten raw in salads and is also quite tasty cooked. Mizspoona Salad Select inherits the vigorous growth and cold hardiness of both its parents. Slight variation in leaf and stem shape to keep you from getting bored but not so much that your taste buds get confused. This mostly uniform population resembles a dark green monster mustard. Mizuna more than Tatsoi. Mizspoona Salad Select is brought to you by none other than Frank Morton. Seed produced by Wild Garden Seed in Philomath, Oregon. 1 g = 250 seeds, $3.50 3 g, $6.50 1 oz, $12.00

Mustard, Dragon Tongue/Ho Mi Z

B. juncea. 20 days baby, 40 days full.

Hands down the most beautiful red mustard for salad mix. The leaf color is green and purple, hard to describe, and reminiscent of the 1990s fractal posters that Sarah had in her room as a teenager ("georgeous," which, to quote Urban Dictionary). Very slow to bolt in spring, it has the perfect balance of sweet and spicy flavors. Sizes up enough to be used in stir-fry. Bred by Frank Morton of Wild Garden Seed in Philomath, Oregon, and renamed Dragon Tongue by Elanor O’Brien of Persephone Farm in Lebanon, Oregon. It is Frank’s favorite fall mustard and Andrew’s favorite spring mustard. Selected from a cross between Hornd and Mike mustards. Seed produced by Wild Garden Seed in Philomath, Oregon. 1 g = 250 seeds, $3.50 3 g, $6.50 1 oz, $12.00
is “a transcendent beauty that forever consumes the hearts and minds of any who gaze at its stunning perfection.” Yes, that is a little hyperbolic for describing a mustard, but the excellent flavor, and oak-shaped red and purple leaves with good moderate heat are hard to beat. Great for salad or bunching greens. Oak Fire has been our go-to spicy green for salad mixes. Bred in Oregon by Tim Peters of Peters Seed and Research for more cold hardiness and disease resistance than other red mustards. We have seen young plants go through 10°F with no snow cover or row cover.

1 g ≈ 250 seeds, $3.50
3 g, $6.50
1/2 oz, $9.00

**Mustard, Pizzo**

*B. juncea.* 20 days baby, 40 days full.

Light green, extra curly salad leaf mustard. Mild when baby and very hot when larger. A very winter hardy mustard that doesn’t flinch when pounded with cold rain or ice. Our first encounter with Pizzo was in a windy winter garden in Ireland and it was thriving through it all. Recommended to us as a winter salad variety by garden writer Joy Larkcom. Originally sourced from CN Seeds in England and we have been growing it here in Oregon for many years.

1 g ≈ 250 seeds, $3.50
3 g, $6.50
1/2 oz, $9.00

**Mustard, Spicy Curls**

*B. juncea.* 20 days baby, 40 days full.

A very diverse and strikingly beautiful mix of curly and wavy, mostly red and purple leaves with good moderate heat. Great for salad or bunching greens. A favorite of ours for winter cooked greens, the heat vanishes once cooked and the rich flavor remains. Bred in Oregon by Tim Peters of Peters Seed and Research for more cold hardiness and disease resistance than other mustards. *Seed produced by Avoca in Corvallis, Oregon.*

1 g ≈ 250 seeds, $3.50
3 g, $6.50
1/2 oz, $9.00

**Napa Cabbage, Nozaki Early**

*B. rapa.* 60-70 days.

A tall napa cabbage with super early heads that are very juicy. The 2-5 lb heads are perfect for kimchi and stir fry. Best covered with row cover to prevent all the other animals in the world from eating them because everybody likes to eat napa cabbage, especially the bugs. Best sown in late summer for fall heading. Most of our late September plant-out headed up in January, even though we should have planted them a month earlier. We’ve also had good luck with early spring plantings, although you need to keep an eye on them so you harvest before they bolt. *Seed produced by Seven Seeds Farm in Williams, Oregon.*

1 g ≈ 250 seeds, $3.80
3 g, $6.80
1/2 oz, $9.50

1 oz, $12.50
1/4 lb, $36.00

**Pak Choi, Luck Dragon**

*A. seeds Original.* Sweet and crunchy green-stemmed baby pak choi. Impressively vigorous in cool weather and it really shines in the greenhouse in early spring and fall. Produces a lot of food fast per square foot. Leaves are erect and a glossy light-green color. The leaf petioles are crunchy yet pliable and resist cracking. Slow to bolt from summer-fall sowings. Luck Dragon was bred from a commercial hybrid and is currently an F3, which refers to the third generation after the original hybrid. We are still in the process of dehybridization, so there is still a little variability in the population but every plant makes a nice baby pak choi. This is proof that you can successfully save seed on some hybrids, stealing them back from corporations.

1 g ≈ 250 seeds, $3.80
3 g, $6.80
1/2 oz, $9.50

1 oz, $12.50
1/4 lb, $36.00

**Yukina Savoy**

*B. rapa.* 25 days baby, 45 days full.

This dark green spoon-leaved Asian green is very similar to Tatsoi but with larger leaves and more savoyed texture. Yukina Savoy is one of the best mild mustards out there, as it works well as both a salad green when small, and sauté green when larger. Stems are a light green and pleasantly crunchy, almost like small pak choi stems. More heat resistant than other mustards and relatively slow to bolt. *Seed produced by Avoca in Corvallis, Oregon.*

1 g ≈ 250 seeds, $3.80
3 g, $6.80
1/2 oz, $9.50

1 oz, $12.50
1/4 lb, $36.00

**Arugula, Tuscan**

*Eruca sativa.* 24 days baby, 40 days full.

Big thick leaves with excellent flavor and very cold hardy. For those who like their arugula to have a little kick, Tuscan has a spicier flavor than common varieties such as Astro. Some plants have strap-like leaves, others are lobed. Seed Ambassador Kayla Preece collected this variety from Agricultori Custodi, a seed preservation group in Tuscany, Italy. *Seed produced at The Organic Farm School on Whidbey Island, Washington.*

1 g ≈ 400 seeds, $3.50
1/4 oz, $7.00
1 oz, $12.50
1 lb, $75.00

**Corn Salad, Gelber Nüssler**

*Valerianella sp.* 55 days.

Nüssler is the common name for corn salad in German-speaking Switzerland, where we picked up this tasty and nutritious gem on our Seed Ambassadors travels many years ago. Light-green (almost golden) leaves have very mild flavor and form a small rosette which is harvested whole or occasionally as cut-and-come-again salad greens all winter long. A cool season vegetable that is best sown in spring or fall. Makes a great winter rotation after the summer garden has been retired. If left unharvested, it naturalizes easily. Best sown where you will always welcome volunteer salad greens. Soil temps above 70°F will cause seed to go dormant. Corn salad has been foraged by Europeans for centuries, and only became commercially available in the 1980s. We were gifted this variety by ProSpecieRara, the Swiss seed saving organization, and have reason to believe that it is *Valerianella elirocarpa,* sometimes referred to as Italian Corn Salad. Aka, Mache, Lamb’s Lettuce.

1 g ≈ 475 seeds, $3.50
2 g, $6.50

1 oz, $9.50

**GREENS, SPECIALTY**

**GROWING & SEED SAVING BASICS**

The specialty greens included here have variable needs, thrive in different growing conditions, and have different requirements for seed saving. Basic growing and seed saving information can be found on our website. Annual unless otherwise noted.

**Alexanders**

*Smyrnium olusatrum.* Perennial/Biennial.

This ancient plant goes by many names and has a long history, possibly going back to Alexander The Great. Large, yellow-flowered umbel blooms are highly desirable to beneficial insects. Aromatic black seeds give Alexanders one of its synonyms – Black Lovage. Leaves are comparable to a mild-flavored parsley, and are tasty in salad or used as an herb. Short lived perennial or biennial that will self-sow and grow in sun or shade. Plants are not true perennials, they tend to die after flowering (which may take a few years). With its noninvasive self-sowing habit, it is perfect for the low maintenance or semi-wild garden. Native to the Mediterranean, the Romans introduced it throughout Europe, where it can still be found growing wild near medieval monastery gardens. The Romans ate the leaves, stems, roots, and flower buds as vegetables. Seeds require a period of moist, cold conditions for germination. Sow in fall or early spring. Very winter hardy, plants sometimes go dormant in the summer. We thank Dr. Alan Kapuler of Peace Seeds for introducing this cool plant to the Oregon gardening scene. Aka, Alexander’s Greens, Ailisanders, Black Lovage, Horse Parsley, Macedonian Parsley, and Maceron.

1 g ≈ 30 seeds, $3.50
3 g, $6.50

**SAP**

www.adaptiveseeds.com

Bringing Biodiversity Back
**Corn Salad, Granon**

*Lactuca sativa.*

Granon is a solid variety of corn salad that grows well year-round in cool climates, but is best known as a winter salad green for both outdoor and indoor production. Plants produce a small rosette (think baby greens size) that may be harvested whole or by cutting individual leaves for cut-and-come-again style harvest. Leaves are broad and thick all the way to the base of the plant. Good uniformity and dark green color. Granon is an excellent choice for the market grower, especially for restaurant sales. Interestingly, according to Wikipedia, “the Brothers’ Grimm tale Rapunzel may have taken its name from this plant, as the eponymous character is named for the ‘salad’ which her father has come into the sorceress’ garden to steal. ‘Rapunzel’ is one of the German terms for cornsalad. ‘Aka, Mache, Lamb’s Lettuce.’

**Cress, Dutch Broadleaf**

*Lepidium sativum.*

Very large, broad leaves for a garden cress, with nice wavy edges. Fairly slow to bolt. Good hot mustard flavor reminiscent of wasabi without too much spice. Makes a substantial addition to salad mix. Dutch Broadleaf cress is great on sandwiches, and we especially enjoy its peppery addition to BLTs. An old variety from the Netherlands, we sourced it originally from Shepherds Garden Seeds in 1999. Commercially unavaiable for a decade, we are happy to have reintroduced it in 2009.

**Cress, Greek**

*Lepidium sativum.*

A delightfully pungent addition to salads, Greek Cress is a type of garden cress (aka, pepper grass) that is easy to grow and thrives in cool weather. Best when young, its delicate, frilly leaves contribute a hot mustardy flavor and it’s a great green to use for cut-and-come-again salads. May also be used as a garnish, on sandwiches, or in stir-fry. Best when sown in spring and fall. Succession sow for best results. Attractive to flea beetles in summer—may be a good catch crop. A Seed Ambassadors Project variety found at a seed swap in Stroud, England.

**Doucette d’Alger / Horn of Plenty**

*Fedia cornucopiae.*

A delicious walnut flavored, tender salad green. Doucette d’Alger is a cousin of corn salad with larger leaves and can be used in a similar manner, however it is a hot weather loving plant that thrives in mid-summer. Flower like an attrative lilac color that bees find highly desirable. While rare in North America, it is a wild edible in the Mediterranean and can be found growing in olive groves and grain fields. Native to Northern Africa, our seed originally came from Patrice Fortier of La Societe des Plantes in Saint-Pascal, Quebec. Aka, African Valerian, Algerian Corn Salad.

**Mix, Adaptive Seeds Butterheads Up**

*Lactuca sativa.*

For those of you who would rather grow head lettuce than baby salad mix, this mix is for you. Includes nothing but butterhead varieties. Colors range from light green to dark red. All will make good, dense heads suitable for salads, sandwiches, or use as lettuce wraps. Can also be cultivated and harvested for baby mix if that’s your thing (or check out our other lettuce mixes).

**Mix, Adaptive Seeds Cool Season Lettuce**

*Lactuca sativa.*

Seasonal lettuce mixes are a great way to achieve culinary and growing success. This mix is best sown in spring (March-April) and autumn (September-October), and includes varieties that have shown excellence in our spring and fall trials. All varieties will germinate in diverse soil conditions and are cool weather tolerant. With a diverse mix of flavors, colors, and textures, the Adaptive Seeds Cool Season Lettuce Mix is sure to delight the palate of everyone from the garden novice to the lettuce aficionado. Includes early to grow romaine, butterhead, loose leaf, and oak leaf types. Most suitable for cut-and-come-again cultivation, but could also be sown for head lettuce. This mix is most comparable to what we formerly called Adaptive Seeds Lettuce Mix.

**Mix, Bitter Is Better**

*Cichorium intybus / Cichorium endivia.*

Features varieties that have performed well in our hot weather lettuce trials. Includes crisphead, romaine, oak leaf, and butterhead varieties, making this mix work well for head lettuce or cut-and-come-again salad mix production. We recommend this mix for summer sowings in the Pacific Northwest.

**Mix, Delicious Diversity Mesclun**

*Species mix.*

One of the easiest ways to celebrate edible plant diversity is to put it in your salad mix. This is our chosen salad mix for most of the year – except the hottest months. Mixed for deliciousness and beauty, with colors ranging from dark red to vivid green. Also very hardy for winter harvest, although best covered with row cover in extreme weather. Due to different seed sizes and maturity dates, this mix is recommended for the home garden. Includes: mizospoona; kale; chicory; radicchio; escarole; musturd; many types of lettuce; AND more! 30-60 days.

**Mix, Summer Fun Salad**

*Species mix.*

Heat-tolerant greens that will add a refreshing kick to summer salads. Mix includes amaranth, purslane, Buck’s Horn plantain, chard, as well as summer lettuces, endives, and more. Unlike the Delicious Diversity Mesclun Mix, there are no Brassicas in this one. Due to different seed sizes and maturity dates, this mix is recommended for the home garden. Formly listed as Summer Salad Mix. 30-60 days.

**Orach, Red Flash**

*Atriplex hortensis.*

We first learned about orach during our time at Horton Road Organics where its shocking red leaves were a key ingredient in their famous salad mix. Red Flash is a European selection that is a great salad mix variety with delightful magenta red leaves. The undersides of the lovely, heart-shaped leaves have a slight metallic shimmer and the flavor is spinach-like with a nice mineral depth. Orach is sometimes called mountain spinach and is a native European green that has been eaten for millennia. Like spinach, it also makes a good addition to a hearty pot of soup. The plants start slow but then grow quickly up to 6’ tall – a different habit than most other salad greens. We harvest bunches when plants are 18” or smaller, then pluck individual leaves for salad mix. Alternatively,
harvest entire plants at baby stage. If you let orach go to seed, it will conveniently volunteer intermittently around the garden. Red Flash occasionally produces a green or bicolor plant. Our seed is bract free, making it easy to sow.

1 g ≈ 150 seeds, $3.80
1 oz, $20.00
1/4 lb, $58.00

**Plantain, Buck’s Horn**
*Plantago coronopus.* Perennial.
Tender crispness with a wonderful nutty flavor and succulent texture. A traditional European green, it survives the harshest winter weather here in Oregon. Plants are perennial and re-grow after cutting. A cultivated species related to the common edible garden weed. Narrow, strappy leaves have some antler-like forking, referenced in one of its common names. Collected by The Seed Ambassadors Project from an Italian organization.

1/4 g ≈ 500 seeds, $3.50
1/2 g, $6.00
1 oz, $18.50

**Salad Burnet**
*Sanguisorba minor.* Perennial.
A delightful salad green, sometimes added to mixed salads in Europe where it is native. The flavor is a nice accent in salad mix as it tastes like cucumbers. Cute, pinnately compound leaves always receive the question, “Oh, what is that?” We love it for its hardness and tasty greens all winter long. Its slowly spreading perennial nature is also a plus and it makes a great edible ground cover. Rare in the US but we think it should be a lot more popular.

2 g ≈ 250 seeds, $3.50

**Shungiku, Komi**
*Chrysanthemum coronarium.*
A deeply serrated leaf Shungiku with long stems and mild flavor. Usually cultivated similarly to broccoli raab and harvested into bunches. With its delicious mild floral flavor, shungiku is something between an herb and a vegetable; we like to add it to stir fry, beans, omelets, soups – just about anything. Smaller leaves make a good all-weather salad green. Frost resistant to some degree and quality is best during cool overtones. One of Andrew’s favorite salad herbs, especially in early winter, though Sarah likes it more for braising. Dark green, oval leaves with slightly irregular edges average 4-7” long. May size up enough for bunching, but does not get as big as other *B. caranata.* Plants grow 2-3’ tall and don’t produce many leaves. Succession sowing recommended. Possibly developed in the Netherlands, species originates in Ethiopia. We sourced this from Madeline McKeever of Brown Envelope Seeds in Ireland.

1 g ≈ 200 seeds, $3.80
1 oz, $22.00
3 g, $6.80
1/2 oz, $12.80

**Silene inflata, Scapulit/Stridolo**
Silene vulgaris. Perennial.
Salad herb native to Europe. Great for year-round salads as it is very hardy. Also good cooked in risotto and omelets. Used throughout Italy for its slightly aromatic flavor much like arugula or chicory, but milder and with an herbal note. Some avoid the older leaves as they have a strong bite. Very easy to grow with pretty flowers. May self seed. Aka, Sculptil, Bladder Campion.

Packet = 200 seeds, $3.50
1/2 g = 800 seeds, $6.50
1/2 oz, $24.00

**Sorrel, Transylvanian**
*Rumex acetosa.* Perennial.
A variety of garden sorrel with nice long, strap-shaped leaves. Good color and flavor all winter. Tolerates dry spells. Extremely hardy and perfect for the permaculture or gourmet garden. We like it added as a small part in salad mixes and sauces, and it is used in sorrel soup, of course. Collected by The Seed Ambassadors Project from a Hungarian farmer at the farmers market in Cluj, Romania, on our 2008 trip to Transylvania.

1/2 g = 200 seeds, $3.50
1/4 lb, $12.00
2 g, $6.00
1 oz, $24.00

**Texsel Greens**
Brassica oleracea.
A selection of Abyssinian mustard. Excellent flavor with some garlic overtones. One of Andrew’s favorite salad herbs, especially in early winter, though Sarah likes it more for braising. Dark green, oval leaves with slightly irregular edges average 4-7” long. May size up enough for bunching, but does not get as big as other *B. caranata.* Plants grow 2-3’ tall and don’t produce many leaves. Succession sowing recommended. Possibly developed in the Netherlands, species originates in Ethiopia. We sourced this from Madeline McKeever of Brown Envelope Seeds in Ireland.

1 g ≈ 200 seeds, $3.80
1 oz, $22.00
3 g, $6.80
1/2 oz, $12.80

**KALE**
*Brassica sp.*
**GROWING & SEED SAVING BASICS**
Sow indoors with good potting soil February through September. Transplant about 3-4 weeks after sprouting. In our region, kale can grow through the winter without protection, and survives best when sown in June or early July for this purpose. Alternatively, direct sow March through September. To prevent inbreeding, let 10 or more plants of *B. oleracea* varieties, or 30 or more plants of *B. oleracea* go to seed. Cut seed heads once pods are dry, place on tarp, thresh by hand or by dancing, winnow to clean. Isolate from other *Brassicas* of the same species by 5’ mile.
by Wild Garden Seed in Philomath, Oregon. Seed produced well-earned reputation for being more winter
Growers dry farmed kale trial. Also has a

Dazzling Blue Lacinato
8. oleracea. 30 days baby, 60-70 days full.
We’ve finally found a Lacinato/ Dino/Italian type kale that’s special
enough to add to our catalog. Dazzling Blue Lacinato is a kale that really lives up
to its name. Captivating blue-green leaves on vibrantly purple stems with that classic
Lacinato leaf shape plus all the flavor. More vigorous than any Lacinato we have grown,
outshined all other kales at the Taproot Growers dry farmed kale trial. Also has a
well-earned reputation for being more winter
hardy than other strains of Lacinato. This
variety was bred in and for organic conditions
by Hank Keogh of Avoca Seed. Seed produced by Wild Garden Seed in Philomath, Oregon.

Gulag Stars
B. napus with B. rapa crosses. 25 days baby, 50-60 days full.
Incredible diversity unlike anything else
A mix of napus kales that have been
crossed with B. rapa. Napus leaf types vary
through the color spectrum from brilliant
red to green to white Russian types; from
super frilly to broad-leafed shapes; from
skinny, short stems to broad, thick stems; and
multiple combinations thereof. Occasional rapa leaf types vary from turnip-leaf to
something that looks like a cross between pak
choi and napa cabbage, though we have been
selecting away from these rapa variations.
Originally bred pollinated by Tim Peters in
Oregon to bypass species incompatibility
mechanisms. Interestingly, individual plants
seem to self-pollinate well making selection of
new varieties from the mix easier. We have
selected new varieties of kale out of this crazy
population in collaboration with Lane Selman
and chef Tim Wastell of the Culinary Breeding
Network. North Star Polaris and Simone Broadleaf were developed through this
collaboration and both have been released as
Open Source Seed Initiative pledged varieties.

Kale Coalition
8. oleracea
A diverse
genepool mix of 17 oleracea kales and their crosses. Nick Routledge trialed the
17 kales collected on our 2007 Seed Ambassadors trip and this is what happened
the next spring. This grex contains a lot of very interesting, diverse kales that are not
available in the US, not just curvy green kales. The resulting mix contains the most
incredibly vigorous kales we have ever seen. If you like a mix of diverse kales in your life,
Kale Coalition is for you. A combination of
Hoj Amager Grunkohl (DK), Madeley (UK),
Westphalian (UK), Westland Winter (UK),
Westphalian Winter (DE), Asparagus Kale (IR),
B. napus.

Blonde Butter of Jalhay (BE), Butterkohl
(DE), Nicki’s Cut’N’Come Again (IE), Shetland
Blonde Butter of Jalhay (BE), Butterkohl
(25 days baby, 50-60 days full.
An extremely rigorous flat leaf, heirloom
green kale from England. Hardly, tender
and sweet. This kale frequently outgrows
every other kale we plant in the summer, and
out-produces most other kales through the
winter as well. Multiple growth tips produce plentiful sprouting kale raab in spring to fill
the hunger gap. Justin Huhn of Mano Farm
in Ojai, California, writes, “Madeley really is
the star, just producing a ridiculous amount
of food. Madeley kale is the backbone of our
CSA.” Related to Thousand Headed kale. Given to The Seed Ambassadors Project by the
Heritage Seed Library in England. Seed
produced by Pitchfork & Crow in Lebanon,
Oregon.
1 g ≈ 250 seeds, $3.80
1 oz, $22.00
3 g, $6.80
North Star Polaris
8. napus. 25 days baby, 50 days full.
Adaptive Seeds Original. The first
release from our breeding work
coming out of the Gulag Stars population.
In keeping with the stars theme, we give you
North Star Polaris. This participatory
breeding project is inspired by the Culinary
Breeding Network and we are happy to have
Lane Selman and Chef Tim Wastell help with
selections. After separating out 15 single
plant lines of Gulag Stars, we discovered this
selection and were quickly impressed. We kept coming back to this line with the
thought, this kale is so perfect. Makes great
bunches with a jagged-silver-green Russian/
Siberian style. Ribs and veins are white
— resembling the popular White Russian.
Vigorous with a sweet flavor, the young leaves
are also great for a frad mix. A true dual
purpose kale. Winter hardy with lots of sweet
leaves to harvest all winter long in Oregon.
An explosion of growth occurs in the spring
after overwintering and prior to bolting, filling
the hunger gap with tons of food. We are
selecting this variety for uniformity, however it still shows some variation.
1 g ≈ 250 seeds, $3.80
1 oz, $22.00
3 g, $6.80
1/4 lb, $44.00
1/2 oz, $12.80
Russian Frills
8. napus. 25 days baby, 50 days full.
An extremely frilly red Russian type. Appears to have frills on frills upon
frills. Seems to be more resistant to aphids and heat than other kales. Good for making
high volume bunches easily. Also great for
salad mix before the frills start truly frilling.
A reintroduction of a nearly extinct Oregon
variety bred by Tim Peters in Douglas County,
Oregon. Commercially lost in the US, but we
found it in Belgium with Seedsman Peter
Bauwens. Seed produced by Uprising Organics
in Lynden, Washington.
1 g ≈ 250 seeds, $3.80
1 oz, $22.00
3 g, $6.80
1/4 lb, $44.00
1/2 oz, $12.80

True Siberian

*Brassica oleracea*

A Siberian type that was recommended to us by Dr. Alan Kapuler of Peace Seeds as a highly productive, hardy kale. A variety that is becoming harder and harder to find. It comes to kale since dwarf types don’t produce nearly as much food. Produces tons of tasty kale raab in the spring. Tolerated water logged soil better than many other varieties. Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

- 1 g ≈ 250 seeds, $3.80
- 3 g, $6.80
- 1/2 oz, $12.80

Kohlrabi

*Brassica oleracea*

**GROWING & SEED SAVING BASICS**

Sow indoors with good potting soil February through March. Transplant 3-4 weeks after sprouting, spaced 12-18” on center. May also be direct sown. In our region, kohlrabi can grow through the winter without protection and produces best when sown in July for this purpose. Collect seeds from 50 or more plants when seedpods have dried down. Cut seed heads, place on tarp, and dance to free seeds. Winnow to clean. Isolate from other Brassica by 1/2 mile.

**Superschmelz**

60-80 days.

Instead of the usual variety description, and because we are in love with kohlrabi and The X-Files, Sarah has written a mini-ode to Superschmelz. Enjoy.

Oh Superschmelz Kohlrabi, how I adore thee. The best part of broccoli (the stem) – at least to me. I didn’t think it possible, but somehow you’re never pithy or woody. Flavor so delectable sweet, mild, and crunchy. You grow all year round; your storage life is otherworldly. Shaped like a planet – mighty Jupiter, not mini Mercury. You look like an alien I want to believe. Like a nova, you are Super what is a Schmelz, anyway?

(Schmelz is a town in Germany where they grow giant green kohlrabi. The Truth is Out There.) Seed produced in collaboration with Whisper Hollow Farm in Brownsville, Oregon.

- 1 g = 250 seeds, $3.80
- 1 oz, $22.00
- 3 g, $6.80
- 1/4 lb, $44.00
- 1/2 oz, $12.80

**Western Front**

*Brassica oleracea*

A selection made by Tim Peters of Peters Seed and Research in Oregon for the most cold hardy kale available. Tim selected Western Front from the 10% of survivors of hard freezes that killed most other kales, including Scotch, Russian and Siberian types. It has some variation, a few white stemmed plants and some broadleaf types, but mostly with a classic red Russian theme. We have continued to prioritize vigor throughout our winters as our main selection criterion. Noted to have a higher rate of perennial regrowth. Perfect for the winter rotation as it grows actively through the winter unlike many other kales. Seed produced by Avoca in Corvallis, Oregon.

- 1 g = 250 seeds, $3.80
- 1 oz, $22.00
- 3 g, $6.80
- 1/4 lb, $44.00
- 1/2 oz, $12.80

**Liège Giant Winter**

Large, hearty winter leek with dark blue-green leaves. Some plants have purple hue to leaves during cold weather. An old heritage variety from Liège (Luik in Flemish), a province of eastern Belgium. Variety given to The Seed Ambassadors Project in 2007 by Belle Époque Seed Company, Belgium.

- 1/2 g = 150 seeds, $3.80
- 1 oz, $36.00
- 2 g, $6.50
- 1/4 oz, $12.50

**Mechelen Blue**

Selected for over 15 years for winter hardiness down to -10° F in Mechelen, Belgium. Not an especially long leek, this variety puts its growth energy into growing fat instead of tall. Thick giant leeks are very highly regarded in Belgium and are an important winter food. A selection of the heirloom Blue Green Winter. From a biodynamic seed grower in Mechelen, Belgium.

- 1/2 g = 150 seeds, $3.80
- 1 oz, $36.00
- 2 g, $6.50
- 1/4 oz, $12.50

**Pancho**

Excellent, quick maturing summer leek. Blue-green color with beautiful broad leaves. Pancho is known for its speed, as it can be sown in March and harvested in August. A great variety for organic farmers that was nearly lost from the trade when hybrid leek seed arrived. It is just as good, if not better than the hybrids in every way. The main reason for hybrid leeks is the money that corporations can make by charging more for the seed. Not a traditional winter leek but it can overwinter fine in our part of Oregon.

- 1/4 oz, $12.50
- 1/2 oz, $25.00
- 1 oz, $36.00
- 2 g, $6.50
- 1/4 lb, $90.00
- 1/2 lb, $180.00
- 1 oz, $36.00

**Verdonnet**

Our best leek if you want beautiful, tall, white stalks from the fall through winter. Of the Swiss giant type, Verdonnet is a landrace variety that has been improved by an unknown Swiss farmer/breeder. Swiss giants are typically great summer leeks, but these large, bright-green, tasty leeks stand all winter and into the spring. A very tall shanked leek good for hilling or trenching to blanch the stalk. Given to us by the Irish Seed Savers Association.

- 1/2 g = 150 seeds, $3.80
- 1 oz, $12.50
- 2 g, $6.50
- 1 oz, $36.00

**Baja**

Small, dark green butterhead lettuce that is good for summer production because it is more heat resistant than most. A lot like the larger market farm standard, Optima, with nice thick leaves that hold up well in the market booth, but with a darker green color. From the USDA GRIN vault. We

- 1 oz, $15.00

2 g, $6.50
1 oz, $30.00

**Bríwerí**

Green. 55 days.

Light-green butterhead, bred for greenhouse and cold frame forcing in winter and spring. Quick to size up in cold conditions, we have planted it outdoors under row cover in spring and in fall with great results. Excellent variety sourced from the German biodynamic seed company, Bingenheimer Saatgut. They recommend sowing in late November in an unheated hoop house for April harvest. Resistant to DM races 12, 17, 18, 22, 24, 25. Bred by Richard Specht with support from Kultursaat, a German Foundation dedicated to advancing open pollinated varieties.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**Brune Percherone**

Red Blushed. 60 days.

An apple green butterhead tinged with a red-pink blush. Early, big, heavy heads grow well in difficult conditions and are heat resistant. An old variety known in Europe since around 1907. Most recently preserved from extinction by the seed saving groups Kokopelli in France, and Pro Specie Rara in Switzerland. We found Brune Percherone with Pro Specie Rara during our 2007 Seed Ambassadors trip.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**Hungarian Winter Pink**

Red. 60 days.

Winter Hardy, light-red butterhead originating in Hungary. The 12” green heads are splashed with red-pink. Very tender and delicious. Quick to bolt in the heat but perfect for spring and fall rotations. When growing for market, we liked to plant a late rotation in September to produce dense, 6” mini-heads for harvest in December through January. We then harvested whole heads and broke them up into our salad mix (years before “Salanova” came out). It was a quick way to add color and bulk up salad mix in the dead of winter. Interior leaves maintain quality down to 20°F. Came to us via the Occidental Arts and Ecology Center (OAEC) in California.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**Focus**

Green. 55 days.

Focus is a solid green butterhead with slightly thicker than average leaves which deliciously do not melt in your mouth like so many other butterheads, but rather crunch slightly. Still pleasingly tender, just not overly so. Leaves are sweet and hold up well for market. More substantial leaves make it more heat resistant and good for summer production. Another treasure of a lettuce rescued by USDA GRIN. Focus was bred in the mid-1990s by a large seed company who applied for a PVP but dropped the application a few years later. As far as we know, it was never available commercially. We sourced it from GRIN a few years back and are happy to have it available, as we think it is a good lettuce for organic production.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**Northern Queen**

Red. 55 days.

Beautiful, light-green butterhead that was popular in the 1950s in English gardens and farms. Quick to produce a medium-sized head. Cold and damp weather tolerant and resists bolting until the summer gets hot. Originally sold by Finney’s of Northumberland, England, before 1950. Given to The Seed Ambassadors Project by the Heritage Seed Library, England, during our visit there in 2007.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**Red Vogue**

Red. 48 days.

This showy lettuce is like having Madonna in your garden. An early red butterhead with great color and size. A former favorite of commercial growers and thanks to USDA GRIN, it was saved from extinction. We chose it in our trials because it’s just plain great for farmers and gardeners looking for a great reliable red butterhead. Red Vogue was released by Sakata Seed in the early 1990s as a “patented variety” through the PVP system but now the PVP has expired. These days companies prefer to use utility patents which are much more monopolistic, even restricting research and plant breeding.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**Sangria**

Red. 55 days.

A really great, medium-sized red butterhead variety. Once popular with market growers but disappeared after the PVP expired. Smooth leaves are red tipped with green interiors. Bred for resistance to lettuce mosaic virus, sclerotinia and downy mildew, Sangria is also heat tolerant, resists tip-burn and holds longer in the field without bolting. Bred from Merivelle des Quatre Saisons by Vilmorn and released in 1989, the PVP expired in 2009 making this variety available to the public domain. We fell in love with this variety when we were farm apprentices at Horton Road Organics, and sourced our seed from the USDA GRIN gene bank.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

**LETTUCE, CRISPHEAD**

*Lactuca sativa*

**GROWING & SEED SAVING BASICS**

Sow indoors in flats with good potting soil year-round. Transplant into the garden at 1” spacing 3-4 weeks after sprouting. Alternatively, direct sow March through September. In our area, lettuce can go through winter if protected. Succession sow for continual harvest. Collect seeds when flowers are downy like dandelions. Cut seed heads and place upside down in a bag to dry for a few days. Knock seed heads against side of bucket or tote, rub downy fluff off seeds, then winnow to clean.

**Hanson Red**

Green and Red. 65 days.

This Batavian type is one of our best lettuces for summer production. Dense heads with thick, dark green leaves and red tips. Delightfully crunchy and resists tip-burn. Very slow to bolt. Not suited to winter production. This lettuce comes to us from a Seed Savers Exchange member and is
different from the commercial standard of the early 1900s called Hanson, which does not have any red coloration. *Seed produced by Avoca in Corvallis, Oregon.*

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $35.00

**Leda**

Green. 60 days.

* A crunchy lettuce that forms large, round, dense heads. Leaves are very light green with a good sweet flavor. A bit more tender than standard crisphead types and definitely more tender than iceberg types. Very slow bolting. Originally from a Slovenian seed company, this lettuce comes to us by way of Tatiana’s TOMATOBasi, a great seed resource in British Columbia that is more than just tomatoes.

1/2 g = 300 seeds, $3.50
2 g, $6.50

**Salade de Russie**

Speckled. 60 days.

* A large, crisphead type lettuce. Olive green with a nice bronze blush and covered in beautiful red speckles. In passing, it could be mistaken for a Castelfranco chicory but with close inspection it is all lettuce. Sweet crunchy flavor even in the heat of summer. Slow to bolt. Seems to be fairly cold tolerant as well. A really good lettuce with a funny name suggesting it is originally from Russia. We have tracked some of its journey from Terre Semences, also known as Association Kokopelli, in France, to author William Woys Weaver, to the Seed Savers Exchange Yearbook. We were looking for a great green looseleaf lettuce that had good flavor, wasn’t patented and met the conditions for us to grow on our farm. Gentilina fills the bill quite well and it also surprised us with hot weather tolerance. A popular variety used for salad mix in Italy, which is also where it originates. *Seed produced by Wild Garden Seed in Philomath, Oregon.*

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $35.00

**Victoria Batavian**

Green. 45-55 days.

* A vibrant green, summer crisphead variety. There are so many names for this type of lettuce – summer crisp, crispleaf and we prefer crisphead because they all make a nice crispy head. This is very true for Victoria Batavian. We spent several years trialing summer lettuce varieties and, along with Saragossa, Victoria Batavian is one of the best from those trials. The origin of this variety is somewhat obscure and our research has traced it back to the 1990s at Johnny’s Selected Seed. The stewardship torch was passed to Turtle Tree Seeds, which is where we found it. We are happy to bring it to Oregon and help keep this excellent variety available. Not the same as the newer green butterhead lettuce named Victoria.

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $35.00

**GROWING & SEED SAVING BASICS**

Sow indoors in flats with good potting soil year-round. Transplant into the garden 3-4 weeks after sprouting at 3” spacing for leaf, 12” for heads. Alternatively, direct sow March through September. In our area, lettuce can grow through winter if protected. Succession sow for continual harvest. Collect seeds when flowers are downy like dandelions. Cut seed heads and place upside down in a bag to dry for a few days. Knock seed heads against side of bucket or tote, rub downy fluff off seeds, then winnow to clean.

**LETTUCE, LOOSE LEAF**

Lactuca sativa

**Ear of the Devil**

Red. 30 days baby; 60 full.

* Massive heads with deer tongue shaped leaves. Green leaves have lots of red tones and crunchy midribs. When harvested young, they resemble Red Deer Tongue but with better color. Very slow to bolt, heat tolerant and always good flavor. The largest head of lettuce we have ever seen was one of these monsters. Maintained by Abundant Life Seed Foundation before the tragic fire destroyed their collection in 2003. More recently, this French heirloom was stewarded in southern Oregon for many years. Aka, Les Oreilles du Diable.

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $30.00

**Garnet Looseleaf**

Red. 30 days baby; 55 full.

* A red loose leaf lettuce with green contrast inside the head. Does not quickly grow oversized as with some red lettuces. Crunchy yet tender texture makes it better than some of the recent lettuces released by the big seed companies with their tough rubberiness. For full color development, it is best grown in full sun. A commercial standard in the late 1980s. Garnet Looseleaf was bred by the Ferry-Morse Seed Company in California for year-round lettuce production. Bred to be an improvement over Prizehead with a darker, more intense red color and shorter plants, it is a single plant progeny selection from the Korean variety Seoul Ruby.

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $35.00

**Gentilina**

Green. 30 days baby; 50 full.

* Bright green, open-headed loose leaf, great for whole heads or for baby leaf cutting. The frilly, sweet flavored heads will get big in a hurry and can be cut at any size. We were looking for a great green looseleaf that had good flavor, wasn’t patented and met the conditions for us to grow on our farm. Gentilina fills the bill quite well and it also surprised us with hot weather tolerance. A popular variety used for salad mix in Italy, which is also where it originates. *Seed produced by Wild Garden Seed in Philomath, Oregon.*

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $35.00

**Hyper Red Rumple Waved**

Red. 30 days baby; 50 full.

* Unconventional red leaf lettuce that is very red and very rumpled. Leaf texture is similar to Bloomsdale spinach, but deep dark-red and lettucey. Great for salad mix and head lettuce. Very hardy, partly due to its red color. The antioxidant anthocyanin causes the red color and defends against cold, wet weather diseases. Good resistance to Sclerotinia and downy mildew, two common lettuce problems for seed growers in Oregon. Developed by Frank Morton, a great independent public domain plant breeder. *Seed produced by Wild Garden Seed in Philomath, Oregon.*

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $12.50

**Red Evolution**

Red. 30 days baby; 55 full.

* Adaptive Seeds Original. We ventured into our first attempt at lettuce breeding with this gem of an ultra red leaf. A little opportunistic to start, we discovered a few off types in one lot of Revolution lettuce. Over a few years, we have stabilized it, and like it more than its parent. A crunchy lettuce that forms large, round, dense heads. Leaves are very light green with a good sweet flavor. A bit more tender than standard crispheads and definitely more tender than iceberg types. Very slow bolting. Originally from a Slovenian seed company, this lettuce comes to us by way of Tatiana’s TOMATOBasi, a great seed resource in British Columbia that is more than just tomatoes.

1/2 g = 300 seeds, $3.50
2 g, $6.50
1 oz, $35.00
**White Seeded Samara**
Green Pink. 30 days baby; 50 full.

Apple green leaf lettuce tinged with pink. A little like a butterhead but with more open heads. Flavor and texture is great. Best as a spring, fall or winter lettuce. Survives cold, wet weather exceptionally well and may even survive deep into winter. Probably originates near Samara, a Russian city on the Volga River. Our original source was from the Heritage Seed Library in England.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Snowflake**
Green. 30 days baby; 55 full.

A Ukrainian green leaf-type lettuce reported to be very popular with commercial growers in Ukraine. The bright green leaves have crisp ribs and frilly leaf margins. Early to size up, Snowflake is a vigorous lettuce with good bolt resistant. Plants attain a very large size if not harvested and produce a crunchy delicacy known as stem lettuce or celtuce, which, as the name suggests, is primarily used as a stem vegetable after the plants elongate but before flowering. At this stage it is most commonly used as a stir-fry ingredient. We have often wondered what the next hip trend in the North American culinary world will be and maybe it will be celtuce. Popular throughout Asia, stem lettuce may be similar to the type of lettuce that our ancestors ate. This variety was mailed to us directly from China in a transoceanic seed exchange.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Vulcan**
Red. 50 days.

The unstoppable vivid Vulcan! Very early to mature with great taste for such a beautifully red lettuce. The tender durability, heat and disease tolerance have made Vulcan our red leaf lettuce of choice for many years. In fact, if we were going to plant one 300’ bed of red leaf lettuce, this is the variety we would choose, easily beating out New Red Fire and Red Sails. Good for organic farm production and/or home gardens. With moderate bolt resistance, be sure to plant in succession. Bred from a cross between Red Fire and a Korean red leaf variety. Introduced by Sakata Seed Company in 1987. The PVP expired in 2010. Yay!

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**LETTUCE, OAK LEAF**
Lactuca sativa

**Florence**
Green. 30 days baby; 55 full.

Bright green oak leaf lettuce has the crisp texture of a romaine. The surprising sweet crunch made us think about dividing the oak leaf lettuce category into butter oaks and crisp oaks, but that is another conversation. The dense heads resist bolting in the field, instead they just keep getting bigger. A fabulous lettuce for full heads, cut-and-come-again or salad mixes. We are always surprised at how many great and unique lettuces are out there; Florence was the most impressive of our USDA GRIN accessions grown back in 2013.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Fristina**
Green. 25 days baby; 60 full.

Produces large, dense heads of deeply serrated oak leaves great for cut-and-come-again salads. Fristina is so deeply cut it almost looks like a frisée endive. When the heads are medium sized, they can be cut about an inch above the base, the handful of lettuce will then fall apart into a perfect bowl of salad. Crunchy sweet midrib is tasty. Heads hold up well in summer heat. Shows good field resistance to downy mildew. Bred in England, where we picked it up on our first Seed Ambassadors trip.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Cerise Oak Leaf**
Red. 30 days baby; 55 full.

An excellent red oak leaf and great for salad mix. Vigorous and slow to bolt with good, sweet flavor, especially for a red lettuce. Fairly resistant to downy mildew. Dark-red pigmented anthocyanins fight the diseases of cold, wet weather and provide good color contrast in mixes. Cerise means “cherry” in French. An English commercial variety that we found in Ireland with Madeline McKeever of Brown Envelope Seeds.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Carnival**
Red. 30 days baby; 55 full.

A fantastic and strange oak leaf lettuce, like some kind of traveling circus. Lime greens and pinks swirled together on leaves pointing in all directions come together to make Carnival very unique. Narrow leaves are similar to Canary Tongue but with a nice red blush. Heads are large and have good flavor. We love this lettuce for spring and autumn heads and salad mixes. Variety given to The Seed Ambassadors Project by the Heritage Seed Library in England.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Xingtai 16**
Green Leaf Stem/Celtuce. 60 days.

At first Xingtai 16 presents as a somewhat normal looking romaine type lettuce, and can be eaten as salad with the familiar lettuce crunch. Leaves have a light green color and savoy texture. But, later in its development, the stems elongate and produce a crunchy delicacy known as stem lettuce or celtuce, which, as the name suggests, is primarily used as a stem vegetable after the plants elongate but before flowering. At this stage it is most commonly used as a stir-fry ingredient. We have often wondered what the next hip trend in the North American culinary world will be and maybe it will be celtuce. Popular throughout Asia, stem lettuce may be similar to the type of lettuce that our ancestors ate. This variety was mailed to us directly from China in a transoceanic seed exchange.

1/2 g = 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

**Having trouble deciding which lettuce to grow?**
- Check out our pre-mixed seed packets listed under “Specialty Greens” on page 47.
- Delicious cut-and-come-again salad made easy!
Morgana  
Red. 30 days baby; $5 full.  
Red and green semi-oak leaf heads have some arrowhead/canary tongue shape. The sweet juicy flavor, cold and heat tolerance, as well as the large and vigorous plants, all come together to make this one a favorite. Great for salad mix and for unique full-sized heads. This lettuce is very popular with seed savers in the Pacific Northwest but has rarely been commercially available. We sourced Morgana originally from Washington seed saver Alice Swan in 2010, who got it from lettuce collector and Seed Savers Exchange Curator Mary Schultz of Monroe, Washington.  
1/2 g ≈ 300 seeds, $3.50  
2 g, $6.50  
1 oz, $30.00

Smile  
Green. 30 days baby; $5 full.  
Great for salad mix production and also heads up nicely for the perfect sized salad at home. The bright green color and sweet flavor combined with the soft delicious texture make Smile a standout variety. Similar in appearance to Galisse but with the ability to attain a much bigger head. If your goal is to grow a ton of salad, this is the right variety for you. Fairly heat tolerant and definitely slow to bolt. Good choice for cut-and-come-again style production. Said to be popular in Europe for outdoor field or greenhouse production, and to be bottom rot resistant. For us, Smile was very resistant to tip burn and mildew; plenty to smile about! Seed produced by Avoca in Corvallis, Oregon.  
1/2 g ≈ 300 seeds, $3.50  
1 oz, $12.50  
2 g, $6.50

Augustus  
Green. 60 days.  
Relatively tall romaine with smooth leaves and dense heads. Legend has it the Roman Emperor Augustus was gravely ill and he was put on a diet of lettuce, which he credited with saving his life. True? Maybe we’ll never know. Tolerant to lettuce mosaic virus and copper root rot, and resistant to downy mildew. A former PVP variety that was dropped when the PVP expired (or maybe when Seminis bought Petoseed, the original developer of the variety). Another lettuce rescued from the USDA GRIN genebank, and brought back to in situ cultivation.  
1/2 g ≈ 300 seeds, $3.50  
1 oz, $12.50  
2 g, $6.50  
1 oz, $30.00

Brown Goldring  
Bronze. 30 days baby; $5 full.  
Similar to Bunyards Matchless with more compact growth, slightly frilled leaf margins and dark green, crinkly leaves with bronze tips. Excellent sweet flavor. Plant breeder and author, Carol Deppe, says it has the best flavor of any lettuce she’s ever tasted. (!!!) Very cold hardy, needing little protection to overwinter. Grows fairly well in the summer, too. A British heirloom originally by the name of “Goldring’s Bath Cos,” it won an award of merit from the Royal Horticultural Society in 1923. The Henry Doubleday Research Association founded it to have three times the Vitamin C as other lettuces. We sourced this variety from the Heritage Seed Library in England. Aka, Crispy Crunchy Green-Gold.  
1/2 g ≈ 300 seeds, $3.50  
1 oz, $12.50  
2 g, $6.50  
1 oz, $30.00

Bunyards Matchless  
Bronze. 30 days baby; $5 full.  
Large, open heads are dark green with some bronze tint. Similar to George Richardson, Brown Goldring, and other Bath Cos types. Crunchy with distinctive nutty, sweet delicious flavor. This English heirloom is both cold and heat tolerant. Scored higher overall than most other lettuces for both agronomic and eating qualities in the Heritage Seed Library’s 2008 Leafy Vegetable Project evaluation. Given to The Seed Ambassadors Project by the Heritage Seed Library in England. Aka, Bunyard’s Matchless. Seed produced by Avoca in Corvallis, Oregon.  
1/2 g ≈ 300 seeds, $3.50  
1/4 oz, $12.50  
2 g, $6.50  
1 oz, $30.00

D’Hiver de Sainte Marthe  
Bronze. 30 days baby; $5 full.  
Crunchy, dark-green leaves tinged with bronze. A cold tolerant fall and winter romaine that is fairly slow to bolt, sweet and delicious. Similar to Bath Cos type lettuces such as Brown Goldring and Bunyards Matchless, but with a more open head and slightly frilled leaf margins. A rare French heritage lettuce from Ferme de Sainte Marthe, a French organic seed company. It was given to The Seed Ambassadors Project in 2007. Seed produced by Pitchfork & Crow in Lebanon, Oregon.  
1/2 g ≈ 300 seeds, $3.50  
1/4 oz, $12.50  
2 g, $6.50  
1 oz, $30.00

Greek Maroulli Cos  
Green. 30 days baby; 60 days full.  
A solid, medium-sized, bright green romaine lettuce. Forms crunchy leaves and tall heads. Many of the heads will form multiple hearts. We thought at first that we should select away from this trait, however we found it to be a fantastic trait for romaine heart production and easy cutting salad mix. There are new patented lettuce varieties on the market that have similar traits to this and we believe that utility patents on natural traits that have existed for centuries to be outrageously corrupt. Here you will find some of the “prior art” of the plant world, to borrow some patent legalese. Originating in Greece, which is where romaine/cos type lettuces were presumably developed. Given to The Seed Ambassadors Project by the Heritage Seed Library in England.  
1/2 g ≈ 300 seeds, $3.50  
1/4 oz, $12.50  
2 g, $6.50  
1 oz, $30.00
Kalura

Green. 30 days baby; 60 full.

Very big, light green romaine heads.

Good heat and cold tolerance with a crunchy sweet flavor. It performs excellently and is a variety we’ve heard many farmers swear by. We swear by it too! This was our romaine of choice when growing for market, and our itinerant elk loved it also. Once a popular commercial variety until it was dropped by the major catalogs. We are always proud to be a part of the community keeping this biodiversity available. Seed produced by Avoca in Corvallis, Oregon.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Little Gem Pearl

Mini Green. 50 days.

A selection of Little Gem, this variety makes miniature heads of green romaine, and is possibly the best for sweet flavor. Because they are so compact, you can plant at twice the density of standard head lettuce, thus yielding more heads per bed foot. Also a great variety for container growing. A Royal Horticultural Society award winner, originally from England and said to be resistant to DM 1, 5 and 7. Seed produced by Avoca in Corvallis, Oregon.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Pandero

Red. 30 days baby; 60 full.

A deep red version of Winter Density with very dense heads that are slow to bolt and have both heat and cold tolerance. The red color darkens up early making it a very good salad mix variety. Can be planted densely like Little Gem and harvested small for mini heads. Resistant to downy mildew. If you like Winter Density and you like red, you will like this. We originally sourced Pandero from a seed company in England. Seed produced by Wild Garden Seed in Philomath, Oregon.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50

Romulus

Green. 30 days baby; 60 full.

Big, dark-green romaine with a crunchy, delicious sweet flavor. The heads are slow to bolt and leaves form tightly without folding over on themselves to blanch a heart that is sweet. Heat tolerant and productive, we recommend this romaine especially for organic farm production, and it’s perfect for gardens, too. Released by Petosseed in 1991 before their infamous mergers. Formerly a PVP, the so-called “protection” recently expired and this wonderful lettuce is now in the public domain. Originating from a cross between Valmaine and 24069, a University of Florida lettuce. Selected for tip burn and bolt resistance, large plants, non-cupping leaves and resistance to lettuce mosaic virus. Seed produced by Avoca in Corvallis, Oregon.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Rosalita

Red. 35 days baby, 70 full.

NEW for 2020! Burgundy red, semi-savoyed leaves are a good color and texture added to salad mix. Rosalita maintains a red-green combo that is now less common, yet beautifully fresh. Also grows to form large, open romaine heads. Relatively heat resistant and slow to bolt. Selected by Rob Johnston to have, among other traits, tall upright stature and resistance to tip burn. Full size leaves can grow large and are good for lettuce wraps. Once a common variety popular on organic farms, but is now hard to find. We are happy to preserve this old school crunch and sweet lettuce. Bred by Johnny’s Selected Seeds and introduced in 1989, its PVP has expired and is now in the public domain. Aka, Johnny’s Red Romaine.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Stoke

Mini Green. 50 days.

A mini romaine, similar to Little Gem. Good for close plantings. Crunchy and dark green, very hardy and said to be capable of overwintering in the south of England (minimum temperatures to 10°F) with no protection. This variety is originally from Stoke, located near Rochester, in Kent, England. It was grown by the Cheeseman family for 150 years, though likely dates from before 1840. We originally sourced this variety from the Heritage Seed Library in England.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Turkish Çağırkan Köy

Green. 50 days.

Long, rounded primitive looking romaine leaf lettuce from a time before industrial focused plant breeding. Can be fairly fast to bolt, but it is worth succession sowing for its unique delicious flavor. Sweet when young, mildly bitter flavor when more mature. Late harvests resemble mild chicory in flavor and can produce many side shoots. One of our more unique lettuce varieties. Collected from a village by the name of Çağırkan in central Turkey by John Letts, a grower of ancient grains in the United Kingdom.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Winter Density

Green. 30 days baby; 60 full.

A serious lettuce classic. We do not carry many common varieties but when we do it, because we really love them. Halfway between a romaine and a butterhead, the crunchy, buttery, dense green heads are very cold tolerant and surprisingly heat tolerant, too. Very popular in England, its place of origin.

1/2 g = 300 seeds, $3.50
1/4 oz, $12.50
2 g, $6.50
1 oz, $30.00

Stoke

by ½ mile.

Farthest North Gala

65 days.

Adaptive Seeds Original. Our selection from the Farthest North Mix that has been in the making since we crossed Gala F1 into the mix over 9 years ago. Still a genepool mix that has been selected for small, round, green-fleshed melons. Our goal is to breed a small fruited super early, super sweet galia/passport/tropical type melon. The color and size are mostly stable so far, however the rind style and flavor profile is still variable. Some taste a lot like the galia-type and some still have a charentais-like flavor, which is also good. A modern landrace that can still be selected by all you seed savers to create many new varieties. This most recent selection included collaboration with chef Tiffany Norton of Party Downtown in Eugene, Oregon, as part of the Culinary Breeding Network. Here’s to open source genetics!

1 g = 30 seeds, $3.50
1 oz, $18.50
4 g, $6.50
4 oz, $37.00
**Farthest North Mix**

65 days.

A diverse genepool mix of ultra early, cool weather tolerant melons. Small, single serving, baseball-to-softball-sized melons vary in color (lots of green-fleshed but also some orange) as well as texture and flavor. This melon is like a box of chocolates (thanks Forrest Gump!). You might not know what you’re going to get, but even the ones you’re less excited about are rather tasty. The earliest short-season variety we have found. Ripens outdoors in Denmark! Developed by Tim Peters of Peters Seed and Research in Riddle, Oregon.

- 1 g = 30 seeds, $3.50
- 4 g, $6.50
- 4 oz, $37.00

**Kazakh**

70-80 days.

Small, green-skinned melons ripen to vibrant gold and have firm, very pale cream flesh with an almost honeydew crunchy consistency. Up to five softball-sized fruit per plant. Super tasty, early variety that is good for cool, short seasons or for folks that are getting their garden in a bit late. Very sweet when picked at the peak of ripeness, keeps well after harvest. We highly recommend it. Originally from Kazakhstan, as the name suggests.

- 1 g = 30 seeds, $3.50
- 4 g, $6.50
- 4 oz, $37.00

**Oregon Delicious**

80-90 days.

Oregon heritage melon mentioned in the Slow Food book, Restoring Salmon Nation’s Food Traditions, compiled by Gary Paul Nabhan. Super juicy and sweet flavor melts in your mouth. Slightly oval shaped but more round than Pike or Spear. Earlier than many heritage melons but not a short season melon. We usually harvest in mid-September from an early June sowing. Very hard to find; only available from one other seed company, Sandhill Preservation Center in Iowa. It is a pleasure to be part of bringing this variety back to Oregon.

- 1 g = 30 seeds, $3.50
- 4 g, $6.50
- 4 oz, $37.00

**Sweet Freckles**

80-90 days.

Unique and delightful, sweet aromatic flavor with a smooth, dense texture. Unusual and attractive appearance, which is pear-shaped and freckled. Vines are exceedingly vigorous and while the stem does not slip when ripe, the color changes from green to orange. Not the earliest melon but it manages to beat the occasionally cool Oregon summer. An early Crenshaw type with a more durable skin and slightly smaller size. Related to, but not the same as, Eel River or Crane melon. Bred by Tim Peters of Peters Seed and Research in Oregon, who told us that his wife only wants him to grow this melon because it tastes so much better than the rest. We nearly lost this one altogether as it was unavailable commercially for some time. But thanks to some very old seed from Tim and a few from Amy Goldman, this wonderful melon is saved!

- 1 g = 30 seeds, $3.50
- 4 g, $6.50
- 4 oz, $37.00

**OKRA**

Abeamoschus esculentus

**GROWING & SEED SAVING BASICS**

Okra needs a lot of heat and humidity. Make sure to wait for warm weather to sow, water it a lot, and cover young plants for extra warmth. Direct sow after danger of frost has passed. Thin to 12-18” in rows 1’ apart. For best texture, harvest pods when still small, around 3-5” long. To save seed, leave a few plants unharvested and wait until fruit have dried. Pick pods, thresh by hand, winnow to clean. Dry seed thoroughly. Okra mostly self-pollinates, isolate by 1/2 mile to ensure varietal integrity.

**Oregon Delicious**

Green. 50-70 days.

We have been trying to grow okra in Oregon since 2005, and we finally found a variety that not only grows well, but also produces seed (well, we’re not sure it’ll happen every year). Nevertheless, we are thrilled that our experiments have led to Burmese okra being worthy of our catalog! This Southeast Asian variety grows shorter than other types of okra which helps it produce fruit earlier. Light green pods are spineless, and have a mild, sweet flavor. Burmese okra is less mucilaginous than other varieties. Generally best picked small, around 3-5” long. With our arid summers and cool nights, okra gets woody fast, so keep an eye on it. Big thanks to Southern Exposure Seed Exchange for supplying our original stock seed all those years ago. They are a great source for southern adapted varieties, they are many of which surprise us with their ability to grow well here, too.

- 2 g = 35 seeds, $3.80

**Burmese**

**Cipolla di Rovato**

1 oz, $36.00

A pungent, yellow storage onion originating in Italy with a classic flat / disc shape. More mild in flavor than our other yellow storage onions. Bulbs range from 2-3” across; smaller bulbs are nice, dense and good for picking. Definitely a delicious all-purpose onion. Surprised us with its superior storage ability. Reliable in so many ways it might just inspire more people to have beautiful onion braids hanging in the kitchen, like in an Italian villa. Seed produced by Avoca in Corvallis, Oregon.

- 1/2 g = 100 seeds, $3.80
- 1 oz, $12.50
- 2 g, $6.50
- 4 oz, $36.00

**Fehmel-Steig**

A. cepa. Yellow Storage. 100 days.

A diverse onion variety originating in Germany. Long day, storage type that stores well for over 6 months. Coveted in our 2016 trials of 12 varieties of storage onions, showing good uniformity of shape with hardly any doubles. Vigorous plants have leaves with unusually thick architecture. Very high yields when given plenty of fertility. An older open pollinated variety bred for commercial growers. Gifted to us by Harold Frasier who formerly worked as an onion breeder for the Oregon growers. Gifted to us by Harold Frasier who formerly worked as an onion breeder for the Oregon growers.

- 1/2 g = 100 seeds, $3.80
- 1 oz, $12.50
- 2 g, $6.50

Bringing Biodiversity Back
Franzisco  
*A. cepa.* Yellow Storage. 105 days.  
**NEW for 2020!** Long day yellow storage onion that consistently performs well in our trials. Reliably produces perfectly round 5" bulbs with tight wrappers perfect for extended storage. Franzisco is famous for its high yield potential and strong root systems that are resilient under many growing conditions including dry farming, although it might not grow as large with less irrigation. Franzisco is a good companion to Fehmel-Stieg, and also came to us via Harold Frasier who worked as an onion breeder for the global commercial onion market.  
1/2 g = 100 seeds, $3.80  
1 oz, $12.50  
2 g, $6.50  

Karmen  
*A. cepa.* Red Storage. 100 days.  
One of the best open pollinated red onions available. Medium-early and uniform. Dark red skin with good red color through all of the bulb layers. Known as a good storage type and we have certainly seen this to be true. Medium sweet flavor. It grows very well for us here in Oregon and shows better downy mildew resistance than many other varieties. A Czech commercial variety popular throughout Central and Eastern Europe. We sourced our seed originally from a Hungarian seed company during our first Seed Ambassadors trip through Europe in 2006.  
Seed produced by Avoca in Corvallis, Oregon.  
1/2 g = 100 seeds, $3.80  
1 oz, $36.00  
2 g, $6.50  
1/4 lb, $75.00  
1 oz, $12.50  

Maria Nagy’s Transylvanian Red  
*A. cepa.* Red Storage. 100 days.  
A landrace red storage onion from a region of Transylvania that is famous for its storage onion production. Onions measure 3-4" across, produce well even with low fertility and water inputs, and store well through the following spring. Maria Nagy was one of the few subsistence farmers in Romania that still saved all of her own seeds when we visited in 2008 and she generously shared them with us. She brought some of these onions to the 2008 Turda Fest Agricultural Festival to help place Turda in the Guinness Book of World Records for World’s Longest Onion Braid, which measured 5,800 meters (3.6 miles)! The Maria Nagy’s Transylvanian Red Onion is a strain of Red Onion of Turda, which was added to the Slow Food Ark of Taste in 2013 and is known for its “sweeter taste and particular aroma.”  
Seed produced by Alan Adesse in Junction City, Oregon.  
1/2 g = 100 seeds, $3.80  
1 oz, $36.00  
2 g, $6.50  
1/4 lb, $75.00  
1/4 oz, $12.50  

Maria Nagy’s Transylvanian Yellow  
*A. cepa.* Yellow Storage. 100 days.  
But of course every homestead farm also needs yellow onions! Our favorite Romanian seed steward, Maria Nagy, shared her yellow onion with us as well. Maria Nagy’s Transylvanian Yellow is very similar in appearance to the red strain (except, obviously, yellow) with 3-4" bulbs and some variability in shape from slightly torpedo to globe. Good storability and great deep pungency, slightly spicier than the red. Onions are the foundation of every good meal and this variety’s rich flavor is hard to beat.  
Seed produced by Alan Adesse in Junction City, Oregon.  
1/2 g = 100 seeds, $3.80  
1 oz, $36.00  
2 g, $6.50  
1/4 lb, $75.00  
1 oz, $12.50  

Newburg  
*A. cepa.* Yellow Storage. 110 days.  
Simply the best open pollinated yellow storage onion. Originally selected from a European commercial hybrid storage onion, it was reselected under and for organic production. The tightly wrapped, copper-skinned, spherical bulbs are known for their excellent storage life, crisp texture, and medium hot rich flavor. Newburg has out-yielded hybrids when trialed under organic conditions, making it a great replacement for the classic hybrid, Copra. Despite the similar name, it is not named after the town of Newberg, Oregon. A dehybridized gem brought to us by Dr. Alan Kapuler in Corvallis, Oregon. Seed produced by Alan Adesse in Junction City, Oregon.  
1/2 g = 100 seeds, $3.80  
1/4 oz, $12.50  
2 g, $6.50  
1 oz, $36.00  

Rose de Roscoff Keravel  
*A. cepa.* Pink Storage. 105 days.  
**NEW for 2020!** The pretty rosy-pink skin of this onion is not the only thing that sets it apart. Flavor is both delicately sweet and piquant, complex but not overpowering. White flesh with light pink layers. Good for braiding and long storage. Rose de Roscoff Keravel is a selection of a type of onion known as Oignon de Roscoff in France. This French heritage cultivar has been grown since the 17th century in Roscoff, Brittany. High in Vitamin C, onions from Brittany were sold to merchant ships as a cure for scurvy. From the 1800s until the World War II, “Onion Johnnies” would travel as far as England selling their famous onions, often on bicycles draped with onion braids. The climate in Brittany must be similar enough to our Pacific Northwest, because Rose de Roscoff Keravel is right at home here. We want to thank Myrrha Zierock for sourcing the seed and bringing this variety to Oregon.  
1/2 g = 100 seeds, $3.80  
1/4 oz, $12.50  
2 g, $6.50  

White Spear  
*A. fistulosum.* Green Scallion/Onion. 60 days.  
Andrew’s favorite green onion! Dependably produces beautiful bunches of green onions. Upright growth with no flopping, vigorous and easy to clean. So perfect that you don’t even need to cut the tops off. Bright green leaves and white bottoms are tall yet5 stocky. We have been selecting this variety for overwintering with much success. White Spear will go perennial and slowly self propagate in our Pacific Northwest climate, as long as you don’t eat them all.  
1/2 g = 100 seeds, $3.80  
1 oz, $25.00  
2 g, $6.50  
1/4 lb, $50.00  
1/4 oz, $12.50  

Rossa di Toscana  
*A. cepa.* Red. 120 days.  
These beautiful, dark red Italian onions can get very large and still maintain good storage quality through February. Classic flattened cipollini shape. White and red layered flesh is very pungent. Strong necks are good for braiding. Studies conducted at the University of Perugia’s Department of Pharmaceutical Sciences showed this variety to have the highest levels of immune stimulating polyphenols and antioxidants. Maybe it should be, “An onion a day keeps the doctor away?” Our strain originated from the Agricoltori Custodi (Farmer Guardians) organization in Tuscany, Italy. Original seed collected in Italy by Seed Ambassador Kayla Preece in 2006. Seed produced by Avoca in Corvallis, Oregon.

2 g, $6.50  
1/4 lb, $75.00  
1/4 oz, $12.50
**Parsnips**

*Pastinaca sativa*

**Growing & Seed Saving Basics**

Direct sow 2-4 seeds per inch in rows 12” apart, April through late June. Keep moist to ensure good germination, which may take up to four weeks. Thin to 4” spacing for large, straight roots. Harvest after frost. A great choice for winter gardens. Collect seeds from at least 20 plants (to avoid inbreeding) in their second year. Cut seed head when seeds are dry, remove seeds by hitting plants with a stick or by dancing. Winnow or screen to clean. Isolate from other parsnips by ½ mile.

---

**Bedford Monarch**

A very rare, old English parsnip variety with long, white roots that have broad shoulders and sweet flavor. The roots can get huge and therefore provide a very high yield of delicious goodness while at the same time breaking through soil hardpan to improve drainage for subsequent crops. During our 2006 Seed Ambassadors trip, we received this variety from the Irish Seed Savers Association, who said it is one of the sweetest parsnips they have trialed.

1 g ≈ 200 seeds, $3.50
1 oz, $18.50

---

**Halblange Weisse SE**

Halblange Weisse is German for ‘half long white’ and this variety is truly half-long with bright white skin. The half-long trait (majority of the mass is near the top of the root which quickly tapers), combined with strong tops results in a parsnip that is notably easier to dig. This variety was a staple for our winter CSA; we planted them in late June for roots that could often be harvested by hand without a digging fork in December! Our strain was selected by the German biodynamic seed company, Bingenheimer Saatgut, and was stewarded for several generations here in Oregon by our friend Gary Rondeau who also selected for flavor. We also have been selecting it heavily for shape and vigor.

1 g ≈ 200 seeds, $3.50
1 oz, $18.50

---

**Kral Russian**

You may think you know parsnips once you have seen a parsnip, but, think again. This is the most unique parsnip we have ever seen and never would have guessed there could be a parsnip like this. A heritage Russian variety with a beet-shaped, bulbous root. This certainly makes for a very easy harvest, oftentimes requiring no digging! Extremely cold hardy and also produces well in shallow or heavy soils. Smooth off-white skin and good sweet flavor. Original seed given to The Seed Ambassadors Project in 2007 by the Heritage Seed Library in England.

1 g = 200 seeds, $3.50
1 oz, $18.50

---

**Green Beauty**

Green Snow. 60 days.

We were tired of short, bushy snow peas, so when we found this beauty from Peace Seeds, we were very excited. Bicolor purple flowers look lovely on vigorous vines that grow up to 8’ tall. The tender, green snow pea pods can grow to 7” and still be delicious. When pods get that big, some develop a pink blush. One of our earliest peas and certainly the most productive. An amazing variety bred by Dr. Alan Kapuler of Peace Seeds in Corvallis, Oregon.

1/2 lb, $18.00
1 lb, $30.00

---

**Retrija**

Latvian Grey Soup. 110 days.

Large seeded, speckled brown Latvian soup pea. For those of us accustomed to green peas this unique grey variety is delightful. We were only aware of green soup peas until we traveled to Latvia in 2006 and discovered these. Then we learned that there are many varieties of speckled peas from all over the world. Retrija has beautiful, pink/red flowers on vigorous plants that grow 4-5’ tall. Peas are good for shelling and eating fresh, or for threshing once pods are dry. In Latvia, these peas are traditionally picked dry and cooked whole in soup, often with diced onion in pork stew for the Christmas season. Latvian Grey Peas, which Retrija is a quintessential example, are listed on both the Slow Food Ark of Taste, and the European Protected Designations of Origin (PDO). We were given this pea during our original Seed Ambassadors Project trip by Dr. Livija Zarina of the State Priekuli Plant Breeding Institute in Priekuli, Latvia. The Institute has one of the longest running scientific experiments on farming with organic practices in Europe.

1/2 oz = 40-60 seeds, $3.80
1 lb, $18.00
2 oz, $6.80

---

**Clarke’s Beltoney Blue**

Purple Pod Shelling.

Another purple-podded pea from Northern Ireland. This one is from County Tyrone and has been grown on the same farm there since at least 1850. Can grow up to 5½’ tall. Purple pods become mottled with green when ripe and the peas have a good, smooth flavor without bitterness. Our original seed came from the Heritage Seed Library in England.

1/2 oz = 40-60 seeds, $3.80
1/2 lb, $18.00
2 oz, $6.80
1 lb, $30.00

---

**PEAS**

*Pisum sativum*

**Growing & Seed Saving Basics**

Direct sow 1” deep February through April in rows that are 12” apart. Thin seedlings to 3” spacing. Protecting early sowings from frost may help with early yields. Requires trellising; try T-posts and bailing twine. Collect seed from pods that are fully dry. Shell by hand or by dancing, winnow to clean. Test for dryness by dancing, winnow or screen to clean. Isolate from other peas by ½ mile.

1 g ≈ 200 seeds, $3.50
4 g, $7.50
1 oz, $18.50

**Bicolor purple flowers look lovely on vigorous vines that grow up to 8’ tall. The tender, green snow pea pods can grow to 7” and still be delicious. When pods get that big, some develop a pink blush. One of our earliest peas and certainly the most productive. An amazing variety bred by Dr. Alan Kapuler of Peace Seeds in Corvallis, Oregon.**

---

**Carruthers’ Purple Podded**

Purple Pod Shelling.

4-6’ tall vines, pink and purple flowers. Purple pods contain sweet, tasty peas for fresh shelling or freezing. One of the best purple-podded types we have grown. The purple pods are easy to find when picking. An heirloom grown by the Carruthers family in County Down, Northern Ireland, for almost 40 years. Given to The Seed Ambassadors Project by the Heritage Seed Library in England. Aka, Carruther’s Purple Pod. Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

1/2 oz = 40-60 seeds, $3.80
1 lb, $30.00
2 oz, $6.80
1 lb, $18.00

**Sugar Magnolia**

Purple Sugar Snap. 70 days.

After more than 15 years of breeding work, Dr. Alan Kapuler developed the first purple-podded sugar snap pea. Beautiful purple pods and flowers. Good sweet flavor, although not quite as sweet as Magnolia Blossom. We find the flavor and texture to be best before the pods get really fat. The beautiful 7” tall vines produce over a long season. Bred by Peace Seeds in Corvallis, Oregon. Seed produced by Avoca in Corvallis, Oregon.

1/2 oz = 40-60 seeds, $3.80
1 lb, $30.00
2 oz, $6.80
5 lbs, $120.00
1/2 lb, $18.00
**Adaptive Early Thai**

*C. annuum.* Very Hot. 90 days.

One of the few varieties of peppers that is said to be more flavorful when underripe than when fully mature. 3-4" long fruit are a unique light-yellow-green when underripe and have a flavor somewhat reminiscent of a very spicy grapefruit. Since fruit is harvested immature, the plant will continue to produce — up to 90 fruit per plant! Makes a great pickle and is also tasty when fully ripened to an orange-red color. Since this is a *C. baccatum* species, you can safely save seeds on nearby sweet peppers without danger of cross-pollination. Originally from Curico, Chile, this seed comes to us from the Seed Savers Exchange.

- Packet = 30 seeds, $3.80
- 1 g = 100 seeds, $6.80
- 1/2 oz, $35.00

**Chilhuacle Negro**

*C. baccatum.* Hot. 65 days, green, 80 days red.

A very rare, northern adapted *C. baccatum* species of hot pepper. 3" long, waxy-yellow fruit ripe to a classic orange-red. Aji Marchant is usually harvested underripe when still green-yellow and used for pickling. The immature peppers are especially flavorful with a unique earthy-citrus bite that is not overly spicy, but definitely packs a punch when fully ripe. An excellent frying pepper at all levels of ripeness, they also make tasty dried pepper flakes after ripening to a bright red. Aji Marchant has the tantalizing history of being used in some of the Italian wax pepper varieties made by the California canning industry during the early and mid-1900s. Known by many different brand names, our variety came to us with the name Marchant. The story goes that Chilean immigrants brought these seeds with them when they moved to California during the 1849 gold rush. Also known as Chileno peppers, they quickly became very popular in northern California and the Central Valley. At the time, northern California was a cultural melting pot and soon Italian immigrants adopted the peppers and renamed them Italian Wax. They were canned and sold by many names including: Marchant, Sierra Nevada Chileno, Lone Pine Peppers, Vallecito Peppers, and California Italian Wax peppers. It is unclear if these are synonyms or genetically distinct yet related varieties. Now rare, Aji Marchant is only grown by a few farms and gardeners in the Central Valley of California, the Sierra Nevada foothills, and the San Francisco Bay area. We are happy to reintroduce the seed commercially in hopes of preserving it for future generations. For more history check out: Italianwax.com/history. Our seed stock came from Cort Richer of Dexter, Oregon. Such a precious gift, thank you!

- 1 g = 100 seeds, $6.80
- 1/2 oz, $35.00
spicy paprika. We just adore this pepper and are sure you will, too. Seed collected by The Seed Ambassadors Project from a Hungarian commercial seed company. Seed produced by Avoca in Corvallis, Oregon.
Packet ≈ 30 seeds, $3.80  
1 g ≈ 100 seeds, $6.80  
1/2 oz, $35.00

**Hungarian Hot**

**Szegedi Paprika**

C. annuum. Very Hot. 70 days.

This is the perfect pepper for making spicy paprika, as the name suggests. Somewhat slender, 4” long red fruit are three to four times fatter than a cayenne with blunt tips. Good flavor when fresh but excels when dried. Fruit dries very easily even in our short season, cool climate. Homemade fresh ground paprika from a Hungarian pepper, like Szegedi 179 Paprika, is a very special thing. The aroma and rich flavor are unmatched. Originally from a Hungarian seed company. Seed produced by Avoca in Corvallis, Oregon.
Packet ≈ 30 seeds, $3.80  
1 g ≈ 100 seeds, $6.80  
1/2 oz, $35.00

**Hungarian Hot**

**Szegedi Paprika**

C. annuum. Very Hot. 75 days green, 90 red.

Classic Hungarian hot pepper with a rich flavor. Heat is high but not too extreme. Round, red cherry shaped fruit are about 1” wide and deep red when ripe. Relatively thick walls for a hot pepper make this a great variety for hot sauce, stuffing, or drying for spicy paprika. Of our hot pepper offerings, it is one of the best for pickling whole. Early to ripen and productive in our climate. Our friend and collaborator, chef Tim Wastell of Portland, Oregon, made a delicious fermented, seedless hot pepper sauce with Szentesi Cherry for the 2015 Culinary Breeding Network Variety Showcase. A great alternative to Cherry Bomb, the Semenis/Monsanto hybrid. Collected by The Seed Ambassadors Project in 2008 from a Hungarian seed company. Seed produced by Avoca in Corvallis, Oregon.
Packet ≈ 30 seeds, $3.80  
1 g ≈ 100 seeds, $6.80  
1/2 oz, $35.00

**Hungarian Hot**

**Szegedi Paprika**

C. annuum. Hot. 70 days.

A Transylvanian hot paprika pepper from Târgu Mureș, Romania. We found this variety to be unbelievably productive and early to ripen. However the best part is its flavor which is medium hot and very rich. Szerrano shape and size but with thin walls, making it good for drying. Makes delicious pepper flakes that are excellent for flavoring sausage and stews. After seeding, we put...
some in our dehydrator and it filled the house with a delicious aroma that other varieties sometimes lack. Original seed received from the Seed Savers Heritage Farm collection and we thank them for preserving it. Aka, Tg. Mures.

Packet ≈ 30 seeds, $3.80 1 g ≈ 100 seeds, $6.80

**Etiuda**

Green to Orange. 80 days. Vivid orange bell pepper, produces loads of blocky, thick-walled fruit early and throughout the season. Almost candy sweet when fully ripe and the under-ripe fruit are also sweeter than most. Bell peppers can be a challenge to grow outdoors here, but Etiuda is a champ with a high percentage of well-formed fruit, good leaf coverage, and very little blossom end rot or lodging. The obvious winner of our 2016 outdoor sweet pepper trials. Highly recommended. An open pollinated variety developed in Poland.

Packet ≈ 30 seeds, $3.80
1 g ≈ 100 seeds, $9.80

**Gypsy Queens**

Lime Green to Red. 70 days. Wonderful, early sweet red pepper that is our effort at dehybridizing “a popular hybrid.” Elongated, tapered fruit are similar to Hungarian sweet peppers. Starts out a lime green color, ripens to red with good flavor at any stage. Now in its sixth season of selection, it is uniform with some purposeful slight variation. We have narrowed the population down to two similar fruit types, a blunt tip and a pointy tip type. Both taste excellent and are very productive. We hope to continue to improve the selection in future years, although it is pretty far along in the process already. Gypsy Queens has repeatedly performed well in on-farm variety trials in the Pacific Northwest. A superb short season market pepper.

Packet ≈ 30 seeds, $3.80
1 g ≈ 100 seeds, $6.80

** Bácskai Fehér**

Yellow to Red. 75 days. Richly flavored Hungarian sweet pepper that is great both fresh and cooked. Attractive, large, conical fruit with a curled tip. Pale yellow fruit ripen to bright orange then red. These colors make Bácskai Fehér a great addition to a market display, as they offer color variation in the booth (and on the plate) even when under-ripe. Very high yielding – hands down the most productive Hungarian sweet pepper we have grown. Another gem originally sourced from a Hungarian seed packet.

Packet ≈ 30 seeds, $3.80
1 g ≈ 100 seeds, $6.80

**Ise**

Green to Red. 60 days green, 90 red. **NEW for 2020!** Ise is similar in flavor and texture to the common Shishito pepper, but sweeter and larger fruited. Larger fruit are 3½” long by 1” wide and still small enough to prep in all of the classic Shishito ways, but the larger fruit make for a quicker harvest. Ise is more well-suited for charcoal grilling since the wider fruit stay on the grill. Shishito peppers took the fresh market scene by storm a few years ago and Ise is a great addition to the market offering! Ise is a late variety so we recommend it for the first frost free area of your garden and in protected areas such as a cold frame for the first harvest. Under-ripe fruit are well-formed and sweet, ripen to a medium orange with a minute red blush.

Packet ≈ 30 seeds, $3.80
1 g ≈ 100 seeds, $6.80

**STICKERS!**

Who doesn’t love a good sticker? Plaster a rainbow of stickers on your computer, put one on every garden tool, or pick your favorite color and share the rest with your friends. Outdoor quality vinyl stickers are UV protected and have permanent adhesive.

If you would like to receive a FREE Adaptive Seeds sticker, simply request one on your order form here, or in your cart at checkout on the website. This sticker is 2” round with a white background and green and purple design.

The Seed Ambassadors Project logo stickers are 2” die cut and available as a rainbow pack of six. Colors include red, orange, yellow, green, turquoise, and purple. We’re requesting $1.00 for a rainbow set of six stickers. Include it on your mail-in order form here, or add it to your cart before checking out at adaptiveseeds.com

**CAN’T FIND WHAT YOU’RE LOOKING FOR?**

Remember to check out our website at: adaptiveseeds.com for up-to-date packet size options, new varieties not listed here, and stock availability.

We don’t have what you’re looking for? Maybe some of our friends do! Here is a list of some other farm-direct seed companies in the West, that we know of and can recommend. Naturally, this isn’t an exhaustive list but it’s a start. Happy sowing!

HOW TO ORDER

WEBSITE
If you are able, we prefer that you place an order through our website: adaptiveseeds.com

Ordering online results in faster order processing times, quick communication, payment with credit card or PayPal, and easier refunds when necessary. Our website is also up-to-date with growing info, inventory, and availability. We only ship via USPS – First-Class or Priority Mailing. We do not ship via UPS or FedEx.

MAIL-IN

Use the order form here, or print one off our website. Fill in your name, address, and contact information. Be sure to write the packet size, quantity, plant type, variety name, and price for each item you are ordering. Remember to add the appropriate shipping and handling charges. Please enclose cash (US$), check, or money order for the full amount owed. We do not accept debit or credit card payment for mail-in orders. We also do not accept phone or fax orders. Send your order with payment to:

Adaptive Seeds
25079 Brush Creek Rd
Sweet Home, OR 97386

If you have questions or concerns about an order, please email us at: questions@adaptiveseeds.com.

REMINDER: Please be mindful when filling out your order form (packet size, price, variety name, shipping and handling, etc) and check your math for accuracy. Refunds, not substitutions, will be issued for out-of-stock varieties.

INTERNATIONAL ORDERS

We are able to process international orders and ship to most countries. However we require that all international orders are placed through our website. We cannot accept foreign checks or money orders (including Canada). It is the responsibility of the international purchaser to know the rules of the destination country. We have encountered problems with customs in a handful of countries, especially those with restrictive rules. Items are typically released once questions have been answered but customs officials can prohibit the release of packages and some have been returned to us. We cannot guarantee that the seeds will arrive, but we guarantee that we will send them. Please follow the rules of your respective countries.

For more information see the ‘How to Order’ page on our website: adaptiveseeds.com.

OUR GUARANTEE

We guarantee that every seed lot we sell is germination tested regularly. Each variety meets or exceeds the germination requirements of the Federal Seed Act and industry standards, for the year in which it is sold. All Brassica family seed lots have been tested and found negative for blackleg (Phoma lingam) as required by the Oregon Department of Agriculture. Should our seeds not germinate for you, please let us know immediately, and we will promptly replace or refund the purchase price. Our liability is limited to the purchase price of the seeds, and refund or replacement is limited to one instance in the year of purchase. All sales are final.

Please let us know if the seeds you receive are mislabeled, or not true to description, so we can correct the problem. We cannot correct a problem we don’t know about. We encourage feedback and look forward to hearing from you!
Liebesapfel

Green to Red. 70 days.

Red ruffled pepper with sweet thick flesh. Very early and also productive late into the season. Deeply lobed, flattened sheenose/cheese type pimento. Fruit develop fewer blemishes during ripening compared to bell-shaped peppers. The German translation of Liebesapfel can be either 'love apple' or 'candy apple.' Either one certainly implies a great pepper and we definitely love it! Developed by a small seed company in Germany. Matures outdoors in Denmark without any plastic. Seed originally from Søren Holt of Frøsamlerne, the Danish seed saving organization.

Packet ≈ 30 seeds, $3.80
1 g ≈ 100 seeds, $6.80
1/2 oz, $35.00

Pointy Kaibi #1

Green to Red. 70 days.

Back for 2020! Excellent early maturing dark red sweet pepper that is definitely one of our favorites. Pointy Kaibi #1 is not overly sweet for fresh eating, instead having an incredible aroma which makes it excellent for sweet paprika. Not only will this variety fill the house with an unbearably delicious aroma while in the dehydrator, it also keeps fresh longer than any other sweet pepper we have tried. Pointy Kaibi #1 can sit in a cardboard tray in the garage easily for a month, if not longer. An heirloom originally from Bulgaria. Variety given to The Seed Ambassadors Project by Real Seeds in Wales. They received it from Mitko Antonov whose family in central Bulgaria has been growing it for generations. Seed produced by Avoca in Corvallis, Oregon.

Packet = 30 seeds, $3.80
5 g, $23.80
1 g ≈ 100 seeds, $6.80
1/2 oz, $35.00

Sunnybrook Pimento

Green to Red. 60 days.

This is the best sweet pepper we have found for short season areas. Short plants ripen medium-thick-walled, early, sweet, blocky-round type fruit a full 2 weeks earlier than other peppers. They continue to mature smaller fruit – somewhere between...
Dill's Atlantic Giant  
C. maxima. 105 days.  
Giant pumpkins are super fun to grow if only because you can't help but smile at such silly fruit. This strain of Dill's Atlantic Giant comes from the Pacific Giant Vegetable Growers, the club that hosts the annual Giant Pumpkin Weigh-off in Gervais, Oregon. In 2014, Sarah came 27th place out of 35 pumpkins with a 416 lb fruit (and met her goal of avoiding the distinction of "biggest loser"). The world record from 2016 still stands at 2,624.6 lbs, besting the previous record by 300 lbs! The Heavy Hitters have lots of tricks up their sleeves, but we grow our giant pumpkins just like we grow everything – organically. For giant pumpkins we space 20' between plants instead of 2½'. Giant pumpkins are awesome because The Great Pumpkin Commonwealth is the largest grassroots plant breeding effort in the world, with thousands of members in dozens of countries all focused on one thing – improving genetics for bigger pumpkins. That's right, thousands of people think plant breeding for giantism is cool. Here at Adaptive Seeds, at least one of us is in agreement.

Packet = 10 seeds, $3.50
1 oz = 50 seeds, $12.50

Montana Jack  
C. pepo. 75 days.  
This jack-o-lantern is often orange in mid-August from an early June transplanting! We never would have thought it possible without seeing it with our own eyes. Many jacks are late to mature; this one is so early you can forget about planting it until July and probably still have good results. Fruit average 8-10 lbs, with a few up to 20 lbs. Good variation in size and shape, and the majority are more round than tall. Average 4 fruit per plant. Bred by the one and only John Navazio, when he was living in Montana, to be an early ripening pumpkin for areas with a short growing season. It has very good flavor for a carving-type pumpkin and could even be used for pies. This variety is a perfect example of how excellent open pollinated varieties can be when given the proper attention. We don't need no stinkin' hybrids!

4 g = 25 seeds, $3.50
12 g, $7.50

Pie Pumpkin Party  
C. pepa. 80-90 days.  
Adaptive Seeds Original. We searched high and low for open pollinated pie pumpkins and were amazed at how few varieties we could get our hands on. After months of scouring the internet and the Seed Savers Exchange, we had 11 varieties, including several heirlooms that came with no description or info beyond the name. We decided to grow them all together, letting them cross freely, and this is the result – a Pie Pumpkin Party! Fruit have your typical pie pumpkin color and shape, with most weighing between 2-7 lbs although there is the occasional large 10+ lb fruit. Some have slight netting on the skin similar to Winter Luxury. Each variety passed a taste test before contributing seeds to the party. There were some definite flavor, flesh color, and texture variations, but all make excellent pie; Early Sweet Sugar Pie even won the annual Caughlin Pumpkin Pie Contest. Parents include Big Red California Sugar, Hondo Small Sugar Pumpkin, New England Sugar Pie, Paarman Sugar Pumpkin, Winter Luxury, Early Sweet Sugar Pie, and more, along with Cinnamon Girl PMR F1. This is a collaborative breeding project with Keegan Caughlin of Taproot Growers and Zea Sonnabend of Fruitilicious Farm. We're excited to see where it goes! Seed produced by Taproot Growers in Springfield, Oregon.

4 g = 25 seeds, $3.80
12 g, $7.50
2 oz, $20.00

RADISH  
Raphanus sativus  
GROWING & SEED SAVING BASICS  
Direct sow ¼" deep, March through September in rows that are 1' apart. Germination in 5-7 days. Thin to 1’ by eating young plants. For mild flavor and to avoid pithiness in bunching radishes, eat before they reach 2” across. Collect seeds from 20 or more plants (to avoid inbreeding) in the second year when seeds have dried down, usually in July. Collect seed heads, place on tarp, let dry a few more days, then dance to free seed. Collect seeds and winnow to clean. Isolate from other Raphanus sativus by 1 mile.

Blauer Winter  
Purple Storage. 60-80 days.  
Storage radish with bright violet skin and white flesh. Mild radish flavor is good raw, cooked, or pickled. Uncommon in the US but a favorite winter staple in Germany. Keeps well in the root cellar, or in the field all winter here in Oregon, as long as the mice don't find them. Sow in mid-summer for harvest in fall through winter. Elongated, conical roots average 3" wide and 6-8” long, but can become much larger if sown earlier and/or left unharvested. Great for kimchi. Seeds collected by The Seed Ambassadors Project from the Swiss biodynamic seed company, Sativa Rheinau. Aka, Hild’s Blauer Herbst und Winter.

2 g = 170 seeds, $3.80
1 oz, $15.00
1/4 oz, $6.80

Okura Winter Queen Daikon  
White Daikon. 40-55 days.  
Classic stump-rooted daikon style radish with mild flavor. White, cylindrical roots can grow to 5 lbs and 16” long but taste best when harvested smaller. Excellent pickled, shredded on salad, or added to soups or stir-fry. An outstanding storage crop, in the field or root cellar. Many daikon varieties hold a lot of their root above ground; Okura Winter Queen keeps the above-ground portion small, contributing to increased winter hardiness. In addition to being a tasty and nutritious vegetable, daikons are also frequently grown as a forage and fodder crop, and as a cover
crop to break through soil hardpan. Best for any use when fall planted. We thank Peace Seeds for introducing us to this variety.

Pink Beauty

Pink Bunching. 27 days.

Round to slightly oval, crisp roots are bright pink and not too spicy. We are rarely impressed with bunching radishes, but these are just darn good. Pink Beauty is all you could ever want in a bunching radish. An excellent market farm variety, praised as being better than many hybrids and we agree. Tops are strong for bunching, roots resist cracking. Best when succession planted in spring and fall, as radishes get spicier and resist cracking. Best when succession planted for harvest October through February.

Rudi

Red Bunching. 26 days.

A very high quality classic red bunching radish. Globe shaped with bright white flesh. Refreshingly crisp and quite tasty. Uniform, quick to mature, and holds well much longer in the field than most open pollinated bunching radishes. Rudi was bred by Enza Zaden, the highly regarded Dutch seed company, before they began focusing entirely on hybrids and patented seed. Seed produced by Deep Harvest Farm on Whidbey Island, Washington.

ROOTS, MISCELLANEOUS

GROWING & SEED SAVING BASICS

These roots are all great choices for winter gardens in our area. Direct sow April through June in rows that are 12” apart. Thin to 3-4” in row. Harvest in autumn for large roots; flavor usually improves after frost. Seeds are produced in the second year and are ready when dry. Save seed from at least 20 plants (to avoid inbreeding) for all of the miscellaneous roots below. Seed harvest varies from pinching off individual flower heads for scorzonera and salsify, to cutting down plants for parsley. We do not recommend seed saving for burdock, as it quickly becomes weedy, the burrs (fun fact, they were the inspiration for velcro) stick to everything, and also have little hairs that irritate the skin. Isolate from other varieties of the same species by ½ mile.

Burdock, Okinawa Long

Arctium lappa.

A variety originating in Okinawa, an island of southern Japan. The people of Okinawa are known for their long lives and health, which burdock is believed to play a part. Often cooked in soups or pickled, it is known for its healing properties and high vitamin content. The burdock root’s ability to penetrate heavy clay subsoil can help improve drainage, but be careful – once burdock is in your garden, it is difficult to get it out. Given to The Seed Ambassadors Project in 2006 by the proprietors of Urtegartneriet, a small Danish biodynamic seed company.

</table>

Parsley Root, Hilmar

Petroselinum crispum.

Pure white, 8” long carrot-shaped root vegetable with a mild parsley flavor. Very aromatic and great in soups or roasted in the oven. Hilmar really shines as a winter vegetable when it sweetens up after a frost. Plus it’s very cold hardy – it was one of the crops that overwintered in the field during our record cold snap of December 2013 (lows of 5°F!). Leaves are also edible. Of the several varieties of parsley root we have tried, Hilmar is hands down the most vigorous – important for a root vegetable that, like parsnips, is slow to start. Big strong tops compete successfully with weeds, make for easy harvest and are nice for bunching. Sow in April through June for harvest October through February.

Salsify, Fiore Blu

Tragopogon porrifolius.

Yet another delicious root crop common in Europe but rarely grown here in the US. Hopefully we can change that as salsify has much to offer! Roots grow to the size and shape of imperator type carrots but are cream colored. Flavor is said to resemble oysters, in fact salsify is also known as "oyster plant." We find this variety to have a very mild flavor, making it very versatile in the kitchen. Young roots can be eaten raw and grated in salads. Full-sized roots are best cooked. Flowering shoots can be eaten like asparagus, and flowers can be eaten whole or used as garnish. Unharvested roots bloom with vibrant purple flowers in the second year; salsify has been planted for its showy flowers alone. Used medicinally for liver and gall bladder support. Produces white roots. Best when direct sown April through May. Hardy to zone 5, this variety contributed to the diversity of our winter CSA and we highly recommend it for the winter garden. Self-seeds freely if allowed to flower, which to us, isn’t a bad thing.

Abundant Bloomsdale

Spinacia oleracea

GROWING & SEED SAVING BASICS

Best when direct sown, early spring or late summer / early fall, 2-3 seeds per inch in 12” rows. May also be sown indoors. Transplant 3-4 weeks after sprouting to 6” centers. Great choice for winter gardens in our area, providing food during the hunger gap. Collect seeds from 30 or more plants to avoid inbreeding, making sure at least 5 are male. Cut seed heads when seeds are dry, thresh by hand or by dancing. Winnow to clean. Isolate from other flowering spinaches by 1 mile.

Scorzonera, Hoffman’s Schwarze Pfahl

Scorzonera hispanica.

This root vegetable has black skin and mild-flavored white flesh. Leaves provide reliable winter greens, and bright yellow flowers in second year are edible. That’s right: three vegetables in one! Not only is this a standby and delicious winter food, but it is a true perennial perfect for the permaculture garden. We found it to be an important addition to our winter CSA alongside the burdock and salsify. Young leaves are delicious in salad and older leaves are great lightly cooked. The leaves and roots both have a nutty lettuce-like flavor. One of the few vegetables that can go through 5°F without flinching and is reputed to have survived -10°F! Hoffman’s Schwarze Pfahl is known for good size, shape, consistency and flavor. From German seed company, Bingenheimer Saatgut. Aka, Black Salsify.

Giant Winter

50 days.

The most reliable, proven spinach for winter production. Dark-green, slightly triangular, smooth leaves can get giant, the size of chard leaves. The smooth flavor is perfect for salad mix when baby size and for bunching when fully grown. Not particularly suited for summer production, Giant Winter has proven to be a winter staple for us. Still good after being harvested from under feet of snow and tolerates our cold rainy winters. Aka, Gigante d’Inverno.

Cultivar: C. sativus

1 oz, $10.00
2 oz, $20.00
1 lb, $60.00

Verdil

45 days.

Giant winter type, perfect for spring, autumn and overwinter cultivation, but not summer. With a particularly aromatic flavor, it’s best suited use is raw, although it is also good cooked. We are always impressed with Verdil’s winter hardiness. The plants can stand in the freezing mud all winter and somehow not be bothered by slugs. Bred in Germany by Brigitte von Wistinghausen with support from Kultursaat and Bingenheimer Saatgut. Seed produced by Avoca in Corvallis, Oregon.

Cultivar: C. sativus

1 oz, $10.00
2 oz, $20.00
1 lb, $60.00

Matador

28 days baby, 48 full.

An excellent deep green spinach for spring and fall production. Relatively heat tolerant, slow to bolt, with excellent flavor. Matador ranked as one of the best tasting in our spinach trials. Round leaves are good harvested small for salad mix, and for bunches once larger. While uncommon in the US, it is a workhorse variety in Europe and won the Royal Horticultural Society Award of Garden Merit in 2000. We sourced our stock seed from Bingenheimer Saatgut, a biodynamic seed company in Germany.

Cultivar: C. sativus

1 oz, $10.00
2 oz, $20.00
1 lb, $60.00

Steadfast

50 days.

With good warm weather tolerance, this is the best spinach we have found for late spring / early summer sowings. While not as early as others, it resists bolting later than other varieties, providing a longer harvest window. Smooth, triangular, succulent dark green leaves have a pleasant, mild flavor that is great raw or cooked. Cold tolerant, too! Highly recommended by Steve Solomon, Thanks to Turtle Tree Seeds for turning us on to this one.

Cultivar: C. sativus

1 oz, $10.00
2 oz, $20.00
1 lb, $60.00

**SQUASH, SUMMER**

**GROWING & SEED SAVING BASICS**

Sow indoors in 2-4” pots May through mid-June. Transplant into the garden 1-2 weeks after sprouting to 2-3” centers and 3’ wide rows. May also be direct sown when soil is warm. Young plants are sensitive, we recommend row cover to protect from frost and insects. To save seed, let fruit mature on plant until autumn when they’re giant. Harvest and scoop out seeds. Rinse off and dry. Isolate from other squash of the same species by at least ½ mile.

**EDIBLE GOURD:**

Sow indoors in 2-4” pots May through mid-June. Transplant into the garden 1-2 weeks after sprouting to 2-3” centers and 3’ wide rows. May also be direct sown when soil is warm. Young plants are sensitive, we recommend row cover to protect from frost and insects. Rampant vines trellis well. May require hand-pollination to set fruit. To save seed, let fruit mature on plant until autumn when they’re giant. Harvest and scoop out seeds. Rinse off and dry. Isolate from other gourds of the same species by at least ½ mile.

**Cucuzza Gourd**

Cucurbita pepo. Light Green. 65-75 days.

The original zucchini grown for thousands of years in Europe, these pale green gourds are best eaten before they reach 12” long. With their white flesh and very mild flavor they are versatile in the kitchen and can be used in any dish that calls for summer squash. The leaves and tendrils, known as tenuuri, are also eaten in Sicily. Fully mature fruit ripens to a woody rind that can be peeled and used to make dipper gourds or creative Halloween costumes (octopus? elephant?). In our standard squash growing conditions, mature fruit topped out at about 4’ long, but this is the same species used in long gourd competitions – the current world record, set in 2015, is almost 12.5’ long! Rampant, fuzzy vines produce beautiful white flowers that are pollinated at night by moths – in the absence of the right pollinators, hand pollination may be necessary. Would be a good candidate to climb up a shade trellis. The 1950s song “My Cucuzza” by Louis Prima is an awesome tribute to this garden specialty that may just inspire you to add it to your garden. Please take a moment to find it on YouTube – we promise that you won’t be sorry!

4 g = 20 seeds, $3.50
2 oz, $20.00
12 g, $7.50

**Genovese Zucchini**

Cucurbita pepo. Light Green. 55 days.

A lovely variety of zucchini from Italy. Fruit is light green with no ribbing and tends to bulb out a bit on the end. As with most Italian varieties, there is some variation in fruit appearance but the flavor is consistently delicious. We especially love the fact that the flavor and texture remain tender and delicious well beyond the “baby” stage, so you can miss picking for a few days and still have tasty zukes for the kitchen. Plants have a fairly large, open bush habit which makes for easy picking. Possibly the most productive summer squash we offer. Skin is fairly thin (no need to peel!) and can blemish easily. Seed produced by Avoca in Corvallis, Oregon.

5 g = 25 seeds, $3.50
2 oz, $20.00
15 g, $6.50
4 oz, $30.00

**Rheinau Gold Zucchini**

Cucurbita pepo. Light Green. 50 days.

A terrific yellow zucchini – delicate texture with a light flavor. Thin skin contributes to good eating quality with no need to peel. Smaller plants have an open growth habit and are productive over a long season. The fruit do not grow as large as green zucchini – if you miss a few days of harvest you won’t be greeted with leg-sized fruit, but rather several forearm-sized ones. Throws the occasional green-fruited plant. Rheinau Gold came to us via Meadowlark Heath and was introduced by the Rheinau Gold Zucchini project in Switzerland and has proven to be a winter staple for us. Still good after being harvested from under feet of snow and tolerates our cold rainy winters. Aka, Gigante d’Inverno.

Cultivar: C. pepo

1 oz, $10.00
2 oz, $20.00
1 lb, $60.00
SQUASH, WINTER

Cucurbita sp.

GROWING & SEED SAVING BASICS

Sow indoors in 2-4” pots with good potting soil May through mid-June. Transplant into the garden 1-2 weeks after sprouting to 2-3” centers and 6’ wide rows. May also be direct sown when soil is warm. Young plants are sensitive, we recommend row cover to protect from frost and insects. To save seed, scoop out seeds when you eat the fruit. Rinse off and dry. Isolate from other squash of the same species by at least ½ mile.

**Black Futsu**

**Blue Kuri**

*C. maxima. 90 days.*

Japanese Kabocha type, blue-grey squash with a flattened globe shape. Sweet with the characteristic dry flesh of a Kabocha or Hokkaido. If stored for a few months, it will become a little more moist. Great rich flavor, but different than Sweet Meat, which is also C. maxima with a similar color and shape. Smaller fruit (2-3 lbs) are good size for market sales and in the kitchen as a meal for two. They keep very well, much longer than Buttercups and other Kabochas. Our seed was originally sourced from Wim Brus, a seed grower for Bingenheimer Saatgut in Germany. He has spent many years selecting it for quality on his farm in the mountains outside Bologna, Italy.

**Butternut Early Remix**

*C. moschata. 90 days.*

As market growers, we knew that winter squash storability and flavor improve with ripeness, so we were always on the lookout for an early butternut variety that matured well here in Oregon. Some hybrids come close, but most OPs require a longer growing season than we can provide. In 2005, we started growing every butternut variety we could find, including Nutterbutter, Hunter F1, Butterbush, Early Butternut F1, Butterfly F1, and more. We allowed them to cross freely and have been selecting for early ripening and 2-4 lb fruit with a classic butternut shape. There is the occasional 6+ lb fruit depending on growing conditions. Because there were so many parents in this genepool, expect some variation, all within a classic butternut theme. Why should every butternut be identical anyway?

**Butternut, Sonca Orange**

*C. moschata. 100 days.*

With orange skin occasionally marbled with green, and exceptionally dark orange flesh, this is one unique and beautiful butternut. Sonca Orange Butternut is by far better and smoother than any other butternut we have ever eaten. Our experience is corroborated by Jo’s son, Cole, who thinks it is utterly delicious, and by a Polish message board, “Sonca fully mature is just the sweetest and most delicious!” (Thanks, Google Translate!) Also good raw. Mostly similar in size and shape to standard butternut varieties, but there is some variation in shape. A commercial Hungarian variety, Sonca is short for Soncatök, which translates to ‘ham pumpkin’ in Hungarian. It came to us via Lieven David, who has been growing it for nearly 20 years in Belgium.

**Canada Crookneck**

*C. moschata. 90 days.*

Another great butternut-type squash that matures in our climate! Canada Crookneck is a bottle shaped “neck squash” that the present-day butternut type was selected from. Very productive and holds well in storage when properly cured. Average size is 3 ½ lbs, though a few reach 6 lbs. Not all necks are curved. Unique shape takes a bit of getting used to but after testing it in the kitchen, we’ve come to prefer it. The bulbous end is easily cut into two perfectly sized bowls that are a fun and delicious way to serve stuffed squash. Size and shape of the neck make it easy to peel (skin does soften enough when cooked to skip this step), quarter lengthwise, and slice into bite-sized chunks. Reported to resist squash vine borers. First offered commercially in 1834 though it’s said to have originated with the Iroquois Nations. Canada Crookneck is included in the Slow Food Ark of Taste. Seed produced by Moondog’s Farm in Mabel, Oregon.

**Delicata, Candystick Dessert**

*C. pepa. 90 days.*

We cannot get enough of this squash. We could eat it nearly every day all winter. A large Honey Boat type with extremely thick flesh and delicious rich flavor. Most delicata have a honey sweet or even maple flavor, but Candystick Dessert delicata has a richer date-like flavor that is truly addictive. Fruit is tan skinned with green stripes, which we find much more attractive than the more common yellow-skinned delicata varieties. Produces both short loaf shapes and long boat shapes. The fruit shape variability is desirable in this instance for genetic diversity and contributes to some added vigor. They keep very well and retain their sweetness better than other squash well into storage. Selected for a small seed cavity – more edible flesh per fruit – so it is not as good for stuffing as Honey Boat. Bred by Carol Deppe of Corvallis, Oregon, author of *Breed Your Own Vegetable Varieties and The Resilient Gardener* (see page 146). She has created the ultimate dessert squash.

**San Pasquale Zucchini**

*Cucurbita pepo. Dark Green, Light Green Stripes. 55 days.*

A richly flavored and productive zucchini from Southern Italy that easily beats watery hybrid zucchini. Similar to Zucchini Striato di Napoli. Fruit is dark green with light green stripes and slight ridges. Produces a lot of male flowers which are great for stuffing or frying and the female flowers hold well enough to pick small fruit with flowers still attached. Good choice for the garden as San Pasquale is productive but not overwhelmingly so – you get a ton of squash to eat and share with the neighbors but not so many that you have to secretly leave them on their doorstep. Yield is consistent all season long. Original seed sourced from the Italian seed producer Emanuele Larosa Sementi.

Delicata, Honey Boat

C. pepo. 90 days.

Very sweet and reliable winter squash.

Unlike its sister variety, Sugar Loaf, Honey Boat is long and less plump, similar to a regular delicata but with copper skin. Certainly among the sweetest winter squash we have ever grown, and sweetness holds well into storage. Larger seed cavity makes this squash ideal for stuffing and making delicata “boats.” Some of the commercial sources of Honey Boat are variable. We are trying to clean it up a bit and return it to its former glory. Bred by Dr. James Baggett at Oregon State University.

2 g = 35 seeds, $3.80
7 g, $6.80
8 oz, $60.00
1 oz, $12.80

Doran Round

C. moschata. 100 days.

Unique, small round butternut different from other butternut types as it looks more like a tan, squat pie pumpkin. Very delicious sweet flavor becomes more developed in storage. Flesh is a deep orange color. Some fruit are very round while others have slight ribbing. When properly stored (at room temperature in a dry location) they can keep for over a year. Days to maturity is fairly late for the PNW at around 100 days, but the 2-4 lb fruit can be picked earlier and cured inside with great results. Given to us originally by Lieven David, a plant breeder and seed saver we met during our first Seed Ambassadors Trip to Europe in 2007. Variety from the Netherlands. Seed produced by Avoca in Corvallis, Oregon.

3 g = 30 seeds, $3.80
1 oz, $12.80
9 g, $7.80
4 oz, $38.00

Gill’s Golden Pippin

C. pepo. 85 days.

Small, orange, acorn-type fruit are an ideal size for single-serving winter squash. This variety shuns the stereotype of acorn squash being bland. Five times more flavorful than most acorn squash, but about half the size. We often get good feedback from commercial growers about Gill’s Golden Pippin’s productivity and flavor. We are also impressed with the fruit set per plant—sometimes more than 10 fruit. With moderate fruit size this variety is ideal for those who love winter squash, but only want to cook a small amount at a time. Some larger fruit are big enough for stuffing. We found Gill’s Golden Pippin was best simply cut in half and served roasted as a side dish (though usually one person would eat two halves). Its bright color and deep lobes are very attractive and make good decorations as well. Developed in the mid 20th century by the Gill Brother’s Seed Company of Portland, Oregon. Seed produced by Moon snag’s Farm in Mabel, Oregon.

3 g = 35 seeds, $3.80
9 g, $6.80
8 oz, $60.00
1 oz, $12.80

Little Gem Red Kuri

C. maxima. 80 days.

Cute, small red kuri type fruit are a good size in the kitchen and for market. Plants produce numerous fruit that weigh 2-5 lbs each. Stores well and has dense, finely-textured flesh. This variety is even good raw, sliced in salads or diced as a snack. It is crunchy and sweet like a carrot, but not as watery, and the nuttiness is almost addictive – much like eating carrots and chestnuts. We love its sweet flavor diced and sautéed with garlic and soy sauce. Good uniformity and bright color, does well even in challenging conditions. We think Little Gem is the perfect size for a kuri squash and its high yield makes it a great choice for market farms.

6 g = 20 seeds, $3.80
2 oz, $20.00
18 g, $7.80

Lower Salmon River

C. pepo. 90 days.

Lower Salmon River squash is one of the short list of heritage Pacific Northwest winter squash varieties. Grown in the Lower Salmon River region of Idaho, possibly for generations, it is uniquely adapted to our bioregion. Plants love it here in western Oregon and are pretty high yielding. Deep orange, sweet flesh is flakier and drier than Sweet Meat. Delicious for pies and soup or even served sliced as a side dish with butter. The salmon pink colored skin is very thick with light mottling. Almost woody rind helps the fruit store for up to one year under ideal conditions and discourages nibbling by mice and deer. Hard rind can be susceptible to cracking if over-watered late in the season, definitely harvest before the fall rains begin. Fruit are generally 3-10 lbs, with an occasional jumbo 15 pounder. Some fruit have a butternut shape (more turban like) and others have a kabocha shape (less turban like). We select for both in our stock seed, liking both shapes and the slight thematic variability is part of its integrity. During squash tasting events held by the Culinary Breeding Network, Lower Salmon River was a big flavor winner: “The texture was on point in each cooking method [raw, steamed, roasted]...will perform well in a variety of processes including a quick and mild pickle, sweet and sour, simple preparations such as roasted, skin on slices or cubed and cooked with hearty herbs and spices. Great squash for home and restaurant alike.” Wow! Original seed sourced from Nicki Maxwell, a friend of The Seed Ambassadors Project who has worked to preserve Pacific Northwest heritage varieties through the Eugene chapter of Slow Food and the Ark of Taste project.

8 g = 20 seeds, $3.80
2 oz, $18.80
24 g, $7.80
4 oz, $28.00

Potimarron

C. maxima. 85 days.

A medium sized, 3-6 lb, red kuri type squash. Fruit is pear shaped, with red-orange skin and bright orange flesh. Flavor is excellent and rich. Not as sweet as Blue Kuri, however it is more appropriate for soups and savory dishes (curry!). The flesh is so orange it makes a near safety orange pumpkin pie! According to The Seeds of Kokopelli, Potimarron squash is said to have been, “introduced to France from Japan in the 1970s by the master of the macrobiotic food system, Mr. Oshawa.” The name is from a combination of the French words for pumpkin and chestnut, as the flavor is said to be reminiscent of chestnuts. In Japanese, the word kuri can refer to chestnuts or to this type of squash. Aka, Courge Chaînette. Seed produced by Avoca in Corvallis, Oregon.

6 g = 25 seeds, $3.80
2 oz, $20.00
18 g, $7.80

Theron’s Winter Harvest

C. maxima. 100 days.

This is the biggest winter squash we have ever grown! Fruit are a light pink/salmon color and look like giant pink Sweet Meat squash. Average 35-40 lbs with some even up to 50 lbs. Vigorous vines grow to 30’ in all directions and average 3 fruit per plant. Originally bred in the 1940s by Theron Atkinson, farmer of local farming legend Paul Atkinson of Laughing Stock Farm, possibly from a cross between a banana type squash and a Hubbard squash. Theron bred this squash to be dual purpose—sweet, moist, and delicious with terrific cooking qualities, great for feeding large families or for use in restaurants, AND also large and productive enough to grow as livestock fodder. Paul continues to grow and improve on this family heirloom variety. A practitioner of rotational grazing since the 1980s, Paul feeds his laying hens this squash all winter long to keep their eggs bright orange. Laughing Stock Farm’s pigs and cows love it, too. We are excited to have introduced it commercially for the first time in 2013. Seed produced at Whisper Hollow Farm in Brownsville, Oregon.

8 g = 20 seeds, $3.80
2 oz, $18.80
24 g, $8.80

Sweet Meat - Oregon Homestead

C. maxima. 100 days.

Beautiful blue squash on huge, vigorous vines. 3-4 fruit per plant weigh 10-20 lbs each and store well through May. Selected for vigor, large seeds for good soil emergence, a small seed cavity, and premium flavor by Carol Deppe in Corvallis, Oregon. She spent years and produced several tons of squash to reselect for these characteristics. Since the release of Carol’s book, The Resilient Gardener (see page 146), which highlights this selection of Sweet Meat, this is one of our top-selling varieties. (Thanks, Carol!)

8 g = 20 seeds, $3.80
2 oz, $18.80
24 g, $8.80

Kokopelli

Seed produced at Whisper Hollow Farm in Brownsville, Oregon.
**TOMATILLO & GROUND CHERRY**

**Physalis sp.**

**GROWING & SEED SAVING BASICS**

Sow indoors in flats, March through early May. Keep warm and well-watered. Transplant seedlings into 4" pots when they have their first true leaves. Transplant into the garden after danger of frost has passed. Always have more than one tomatillo plant, as they are usually self-sterile. Will self-seed. Collect seeds from ripe fruit by harvesting and removing wrapper. Put fruit in a container with a small amount of water, and smash, or use a food processor. Seeds will sink; add water to decant pulp until seeds are clean. Strain and dry thoroughly. Isolate from other *Physalis* sp. by at least ½ mile.

---

**Ground Cherry, Otto’s Brush Creek**

*Physalis pubescens*

This is one of our favorite things to snack on while walking through the garden. Little, golden, husked fruit look like tiny tomatillos but have a deliciously fruity tropical flavor. Some compare them to peaches, others to pineapple. We have been told that you can make a delicious preserve out of them. We simply wait for fruit to fall off the plant when we’re sure they are ripe and eat them. Ground cherries have a long history in the garden and we found this strain growing semi-wild in our backyard, one of many interesting things that came along with the property when we moved here in 2009 (a list that also includes our beloved cat Meowstein, a 1930s dump truck in the creek, an opossum hide in the barn, and some awesome wallpaper in the kitchen). We suspect it’s been here for decades, as the farm’s previous owner, Otto Shockey, was an avid gardener. Every year a few plants pop up and take care of themselves. If you like a little wild character in your garden, these are perfect to have self-perpetuating alongside the other feral crops (we’re looking at you, burdock).

Packet = 50 seeds, $3.50

Large Packet = 200 seeds, $6.25

**Tomatillo, Plaza Latina Giant Green**

*Physalis philadelphica.* 80 days.

This special giant Mexican strain produces 3-4" wide, green fruit on super tall plants that benefit from support. Seed originally saved from imported Mexican fruit purchased at the Plaza Latina Market in Eugene, Oregon, in 2005. Much higher culinary value than the smaller yellowish varieties. We like to think of them as the Brandywine of tomatillos. Tomatillos are often called *tomates verdes.* Always have more than one tomatillo plant in your garden, as they are usually self-sterile. Seed produced by Avoca in Corvallis, Oregon.

Packet = 50 seeds, $3.50

1/2 g = 200 seeds, $6.25

---

**Tomatillo, Cisneros**

*Physalis philadelphica.* 75 days.

A large, green tomatillo similar to Plaza Latina Giant Green, but a little earlier to mature and not quite as big. Fruit are 2½" wide and a great choice for market farmers and gardeners. Under-ripe apple-green colored fruit make a nice tart addition to salsas, but we also like the sweetness that comes with yellow-green ripe fruit. Sprawling plants benefit from a trellis, but will crawl around on the ground happily. Always have more than one tomatillo plant in your garden, as they are usually self-sterile. Seed produced by Avoca in Corvallis, Oregon.

Packet = 50 seeds, $3.50

1/2 g = 200 seeds, $6.25

---

**Tomatillo, Keepers Modern Landrace**

*Physalis philadelphica.* 70 days.

Adaptive Seeds Original. This is our effort to breed a medium-sized purple tomatillo that stores for a very long time off the vine. Shades range from a slight purple blush on green, to deep purple all through the fruit. Purple tomatillos have a more complex flavor than green ones. They are reputed to keep well already and we are trying to improve on this. A landrace is a variety that has been purposely maintained as a diverse gene pool to help it be more adaptive to harsh conditions. We like this old form of plant breeding, and are using it to create a modern landrace. Always have more than one tomatillo plant in your garden, as they are usually self-sterile.

Packet = 50 seeds, $3.50

1/2 g = 200 seeds, $6.25

---

**Columbianum Wildform**

Red. 65-70 days. Indet.

Massive tresses of medium-small, red cherry tomatoes ripen in clusters of 20 or more. Fruit have good rich flavor, and ability to hold on the plant. Originating wild in Colombia. Some sources say this variety may be a separate species, *Lycopersicon columbianum,* however we believe it is a semi-wild member of the common tomato species *Lycopersicon esculentum,* aka., *Solanum lycopersicum.* Therefore, we use Columbianum Wildform as the variety name. Originally given to The Seed Ambassadors Project in 2007 by tomato seed collector Gerhard Bohl when we visited him in Germany.

Packet = 30 seeds, $3.50

1/2 g = 150-250 seeds, $6.50

1/4 oz, $28.00

---

**TOMATO, CHERRY & GRAPE**

*Solanum lycopersicum*

**TOMATO, CHERRY & GRAPE**

**GROWING & SEED SAVING BASICS**

Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well-watered. Up pot seedlings into 4" pots once they have two true leaves. Transplant into the garden once danger of frost has passed, late May in western Oregon. Collect seeds from ripe fruit by squeezing into a jar and add 25% more water. Wait a few days for mold to form. When seeds sink and gel-sac is gone, decant and rinse to clean. Dry thoroughly.

**Black Cherry**

Purple. 70 days. Indet.

So you might be wondering why this tomato? Doesn’t everybody sell this tomato? Well, our penchant for obscurity sometimes goes too far and this tomato is just too good to pass up. Tall plants have huge yields of medium-sized, round, purple-chocolate-black cherry fruit that taste so good, your tastebuds think you’re eating a big heirloom slicer. Sarah claims that these are her favorite tomato for flavor and they certainly are the first to be eaten when there is a choice. Andrew says they are “much, much” better than Sungold. A great addition to mixed cherry punts or to add some color diversity to your market display. Black Cherry can get Fusarium in outdoor production, but it is unstoppable in the greenhouse. A superb modern open pollinated tomato. Developed by Vince Sapp of Tomato Growers Supply and released in 2003.

Packet = 30 seeds, $3.50

1/2 g = 150-250 seeds, $6.50

1/4 oz, $28.00

---

**Dark Orange Muscat**

Orange. 65-75 days. Indet.

Tall vines produce unique, large dark orange cherry tomatoes with bronze shoulders and some green inside. Sweet, fruity flavor. Very productive. Medium-large fruit fills pints quickly. This variety has traveled across the pond at least twice: Madeline McKeever of Brown Envelope Seeds in Ireland received this seed from a seed saver in Washington State while at an Organic Seed
Alliance conference; and while we were in Ireland, we picked it up from her and brought it back to the Pacific Northwest.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Estonian Yellow Cherry**

Yellow, 65-70 days. Indet. Multi-flora type with up to 100 fruit in a cluster. High yielding of small, round, yellow fruit with pointy ends. Good, sweet intense flavor. Early, decorative, and cold tolerant plants. Fruit hold their quality through late fall when others split or rot, and hold well off the vine. Collected from an elderly Russian woman at a market outside of Tallinn, Estonia. Given to The Seed Ambassadors Project by Lila Towle, fellow Seed Ambassador and member of Frasamleer, the Danish seed saving organization.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Galina’s Cherry**

Yellow, 60 days. Indet. Tomato leaf. Bright yellow cherry tomato with unique, perfectly balanced sweet and tart flavor that we never tire of. Yields early and heavily all season long. Does well in both cool weather conditions and in the heat. Keeps very well off the vine. Picked ripe, this tomato kept for 2 months piled in a tray in cool weather conditions and in the heat.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Green Bumble Bee**

Green Striped. 75 days. Indet. Large, oblong cherry tomatoes are green with dark purple stripes – similar to a cherry version of the legendary Green Zebra. When mixed in a pint with our other two bumble bee varieties, Pink Bumble Bee and Purple Bumble Bee, it offers great complementary color and flavor. Nice firm texture lends some split resistance. Sweet balanced flavor. Inverse coloration selected out of Purple Bumble Bee by Tatiana Kouchnareva, the creator of Tatiana’s TOMATObase, in British Columbia, Canada.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Gardener’s Sweetheart**

Red, 65 days. Indet. This adorable little tomato has a lot to offer and quickly became a favorite field snack. Cute, heart-shaped fruit are large for a cherry with a really good firm texture and a lovely sweetness to match. Gardener’s Sweetheart has vigorous plants that produce long trusses of split-resistant fruit. Bred by Will Bonsall in Maine from a cross between a cherry and a paste, and released in 2014. Thanks to Fruition Seeds for turning us on to this one.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Harvest Luck**

Red, 50-60 days. Indet. Entepfluglück in German. Bright red, round classic cherry tomato. Long, forked tresses hold up to 30 fruit. One of our favorites with its perfectly balanced sweet flavor. It is easy to eat pint after pint of Harvest Luck, and they are great added to salad. A standby variety for our farmers market sales. Given to The Seed Ambassadors Project by seed steward Gerhard Bohl in Germany.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Humboldtii Wild Pink**

Pink, 60-70 days. Indet. This tall, wild cherry tomato produces large quantities of small tart fruit with pink skin. A little bit acidic for some, but many people prefer it at our tomato taste-offs. A unique variety in a world of super sweet cherry tomatoes. We have been told that this type of tomato is found cultivated in parts of Central America and sometimes growing wild. Our original seed was received from collector Gerhard Bohl when we visited him in Germany in 2007.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Humboldtii Wild Purple**

Purple, 60-70 days. Indet. Similar to Pink Bumble Bee but purple with green marbling and a more oval shape. Productive, short indeterminate vines produce over a long season. Large cherry fruit are crack resistant and hold well off the plant. Flavor is less sweet than many cherry tomatoes but has a good almost heirloom tomato complexity that other varieties lack. Released in 2012 by Artisan Seeds in California.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Purple Bumble Bee**

Purple Stripped. 70 days. Indet. This 2012 release from Artisan Seeds in California is a great addition to the cherry tomato patch. Pink with yellow and orange stripes. Large fruit (for a cherry) are very eye-catching and fill pints quickly. Firm, round fruit are crack resistant and hold well off the plant. Flavor is a good tangy/tart.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

**Tomato, Currant**

*Solanum sp.*

All the flavor of a big tomato squeezed into the size of a currant! Carefree growth and uncontrollable yield; can become self-perpetuating volunteers in the garden. Perfect for half-wild, untended gardens and permaculture plantings. It is very difficult to figure out currant tomato species classification. Originally all currants were *Solanum pimpinellifolium*, however many people believe most cultivated currants have been crossed with *Solanum lycopersicum*. Whatever the case, currants do cross pollinate more readily to their semi-wild nature.

**Growing & Seed Saving Basics**

Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well-watered. Up pot seedlings into 4” pots once they have two true leaves. Transplant into the garden once danger of frost has passed, late May in western Oregon. Collect seeds from ripe fruit by squeezing into a jar and add 25% more water. Wait a few days for mold to form. When seeds sink and gel-sac is gone, decant and rinse to clean. Dry thoroughly.
Golden Currant
Yellow. 70 days. Indet.
An excellent currant tomato, producing tiny golden-yellow fruit packed with flavor that is fruitier than Yellow Currant and sweeter than Orange Currant. Plants are quite sprawling and require either a lot of space or a very sturdy trellising system as plants can grow to 8-10' with huge yields. If you plant a few of these plants you will have currants coming out of your ears—in a good way. You will be sprinkling them into every salad, yum! Suspected to be a parent of the hybrid Sungold, but we have not confirmed this.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00
Sweet Cherriette
Orange. 65-70 days. Indet.
Produces immense quantities of miniature (¼ – ½”) tomatoes similar to other currant types but with good orange color and split resistance. Skin is thick, but flavor is excellent, fruity and sweet. They delightfully pop in your mouth! Tiny fruit holds quality for a long time both on and off the plant. Very productive, tall, non-shattering vines. Variety given to The Seed Ambassadors Project by Gerhard Bohl, a tomato seed collector in Germany.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00
TOMATO,
EARLY RED
Solanum lycopersicum
These are all red slicing tomatoes with early maturity, 45-65 days. They can be grown in very short season areas and as early successions to main season varieties if you have a longer growing season. Many are indeterminate (indet.) and will continue to ripen fruit all summer long, they just start early. Others are determinate (det.), in habit, yielding one or two big flushes of fruit, allowing for a planting of salad or other short season crops after the main crop tomatoes are finished but before the growing season ends. Determine types need minimal trellising or caging, if any at all, and are better for container gardening.

GROWING & SEED SAVING BASICS
Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well watered. Up pot seedlings into 4” pots once they have two true leaves. Transplant into the garden once danger of frost has passed, late May in western Oregon. Collect seeds from ripe fruit by squeezing into a jar and add 25% more water. Wait a few days for mold to form. When seeds sink and gel-sac is gone, decant and rinse to clean. Dry thoroughly.

Arahat Flame
60 days. Semi-det.
Very attractive bushy plants are heavy yielders all through the season of flattened, medium-sized, deep red 6-8 oz. fruit. Great rich tomato flavor and one of our favorites. Appearance is similar to Marmande but with less ribbing. Our research traces this variety to Debrecen, Hungary, and possibly from Armenia near Mount Ararat before that. Originally sourced from Gerhard Bohl, who says that “it grows at the foot of the mountain.” Arahat Geflammt in German.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Aurora
60 days. Det.
This was one of our standby farm varieties for producing early red slicers. Known for its rich classic tomato flavor. Medium sized 2-4 oz red fruit have a slightly flattened globe shape. Excellent fresh market slicing tomato, also good for cooking. Small bushy plants provide large early yields. Grows well in cool, outdoor conditions. Named after the Aurora Borealis in Siberia where it originates. Given to The Seed Ambassadors Project by the Irish Seed Savers Association and highly recommended to us by Kate McEvoy and Ben Gabel of The Real Seed Catalogue in Wales.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Cyril’s Choice
50-60 days. Det. Dwarf.
An early dwarf tomato that is also very productive for such small vines. Plants produce several flushes of dark red fruit, yielding later into the season than other determinate types. Fruit are little 2-3 oz saladettes with good sweet flavor. At 2” tall they are good for container gardening, a little taller than Gundula. Our friend Tera, formerly of Morning Sun Nursery, used them for container sales and said they were the cutest tomato plants she had ever seen. Rugose, regular-leafed foliage give Cyril’s Choice a special style. An English family heirloom, kept alive by D. Rankilor whose brother, Cyril, grew it on his allotment before he died. Given to The Seed Ambassadors Project in 2007 by the Heritage Seed Library in England.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Fireworks
55-60 days. Det.
One of the largest extra early tomatoes. Medium sized, red, juicy 3-6 oz globes on short manageable bushes. Good as an early production tomato due to its high percentage of perfect marketable fruit. Similar to Starfire (listed under Tomato, Main Season Red) but earlier and a little smaller. Bred by Tim Peters of Peters Seed and Research in Riddle, Oregon.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Forest Fire
45-50 days. Det.
Extra early tomato with attractive 2-3 oz red fruit on dwarf bushy plants. Firm and split resistant. Forest Fire is the perfect low maintenance first wave of a long tomato season. The three amigos here are: Forest Fire, Fireworks, and Starfire. They run the gamut from earlier and smaller to later and larger. Forest Fire is not a disease resistant variety but since it is an early determinate, plants usually finish producing before diseases set in. Bred by Tim Peters of Peters Seed and Research in Oregon.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Gill’s All Purpose
60-70 days. Semi-det.
Good yields of 3” round, 4-5 oz, red fruit with firm texture that are delicious for fresh eating but also good for processing into juice or paste, or canning whole. Gill’s All Purpose makes a good outdoor market farm tomato, grows to 4’ tall and is easy to trellis. As a semi-determinate, it will keep ripening fruit through the end of the season but will not outgrow short trellis systems. Disease resistant plants help keep yields high and dependable. An Oregon heirloom worthy of name recognition by customers at market, weather. Bred by Dr. Alan Kapuler of Peace Seeds, from a cross made by his daughter Kusra, of Willamette and Skorospelka.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Fireworks
like Brandywine or Cherokee Purple. Another treasure from the Gill Brothers Seed Company of Portland, Oregon, released in 1947.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50

### Gundula

**55-60 days. Det. Dwarf.**

Dwarf bushes, rugose regular-leaved plants produce medium-sized, 2-3 oz meaty fruit prolifically and early. It always surprises us just how many lovely red-orange fruit grow on such a small stout plant. Very good for container gardening, as plants only reach 12-20" tall at maturity. Gundula is perfect for a pot on the porch. Originating in East Germany, it was given to The Seed Ambassadors Project by Gerhard Bohl in 2007.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $28.00

### Harzfeuer

**55-60 days. Indet. Potato leaf.**

**Back for 2020!** 2-4 oz round, slightly oblate, bright red fruit held in clusters. The best trait of Harzfeuer is the aroma when fruit are ripe – they smell different, adding a delightful note to the already great well-balanced flavor. Very juicy for fresh eating. Harzfeuer translates from German to “resin fire.” However, this variety’s name refers to the mountainous and forested region of Harz that divides western and eastern Germany. This is said to be the heirloom predecessor of a common German hybrid variety that was thought to have been lost for many years. Ulla Grall of Bio-Saatgut received it from an elderly woman in former East Germany. A complicated history, at the very least it was a favorite in East German *dacha* gardens before reunification. Ulla Grall gave Harzfeuer to The Seed Ambassadors Project on our 2006-2007 trip through Northern Europe.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $28.00

### Marmande

60-65 days. Semi-det.

Bushy plants produce clusters of 4-6 oz flat, lightly ribbed, red fruit. Good firmness in addition to excellent flavor, two attributes that make Marmande a perfect variety for market farms. Good when eaten fresh or cooked. Very dependably yields outdoors, even in cool summers. Traditional variety from the south of France, and a favorite of commercial growers there in the 1940-50s. Still very popular in French and English gardens. Possibly developed by Vilmorein Seed Co in 1897, though its heritage is uncertain as there are many strains and re-selections. We sourced our selection from the 2007 Seedy Sunday Seed Swap in Brighton, England. Verticillium and Fusarium wilt resistant.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $28.00

### Oldendorf Red

65 days. Indet.

Another excellent European tomato. A medium-early variety with tall plants that are loaded with perfectly round, brilliant red fruit weighing 3-4 oz. The firm, flavorful fruit keep well once picked, making Oldendorf Red an excellent salad tomato for market farmers. Very productive when grown outdoors. Consistently holds better quality late into the season. This variety is the result of a breeding project supported by Kultursaat, a German foundation dedicated to developing biodynamic seed varieties. Bred specifically for trellised greenhouse production in Oldendorf, Germany, by Ulrike Behrendt. Sourced originally from the German biodynamic seed company, Bingenheimer Saatgut, in 2006 during our first Seed Ambassadors trip. Aka, Oldenrot.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $28.00

### Santiam

60 days. Det.

Short bushes can set fruit without pollination (parthenocarpic), resulting in earlier fruit that may be seedless. 2-3" globs with good flavor. A little smaller and earlier than Siletz, but still a good size weighing 3-5 oz. Our favorite early determinate tomato variety from Oregon State University, and the second of the three rivers releases along with Siletz and Willamette. Bred by Dr. Jim Baggett and released in 1984 along with Oregon Spring. Verticillium and Fusarium wilt resistant.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $38.00

### Serrewonder

60 days. Indet.

Produces medium-sized, 2-5 oz, red globes held in large clusters. Rich, excellent flavor, keeps well on and off the vine. Meaty enough for cooking and tender enough for fresh eating. Another one of our favorites, this smaller salad type tomato is still a favorite in Northern Europe. Serrewonder is a Belgian heirloom from at least 1925. Listed in the 1929 Hollandse Zaadhandel catalog of Mechelen, Belgium. Possibly named after the Serre River, a tributary of the Oise River in France. Given to The Seed Ambassadors Project by Belle Epoque, a seed company in Belgium. Aka, Miracle of Serre.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50

### Siletz

60-70 days. Det.

Superb, early production variety that is ideal for the Pacific Northwest. Heavy yields of big, juicy red slicers weighing up to 10 oz. Easy to grow, even in less than optimum growing conditions. Developed to be an improved Oregon Spring, it is indeed bigger and earlier with better flavor. Siletz is parthenocarpic, meaning it can set fruit without pollination, which contributes to its ability to thrive in cooler temperatures and yield many seedless fruit. Popular in our region for outdoor production on organic vegetable farms. Bred by Dr. Jim Baggett of Oregon State University and released in 1994. Verticillium and Fusarium wilt resistant.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $38.00

### Stupice

55 days. Indet. Potato leaf.

Flavor is rich and aromatic with that summer tomato taste sometimes missing in early tomatoes. Shrubby plants are short yet viney and continue to yield clusters of 2" red, 2 oz fruit throughout the season. A very special Czech variety introduced to the Seed Savers Exchange Yearbook in the late 1970s and it has been a go-to workhorse variety in the Pacific Northwest ever since. We try to specialize in rarities and Stupice is definitely not a rarity any more. However, it is so good, so tasty and so early, that it is our yardstick to measure all other early tomatoes. Seriously, if you have never grown it we recommend trying it at least once. Said to be pronounced "stup-eetch" or "stu-peechka." Originally introduced to the US from the former Czechoslovakia by Milan Sodomka.

**Packet = 30 seeds, $3.50**
1/2 g = 150-250 seeds, $6.50
1/4 oz = $28.00

### Uralskiy Ranny

50 days. Det. Dwarf.

Unique, super early dwarf plants are very well-suited for container culture. Red, 2-4 oz, mini-beefsteak shaped fruit are juicy with good flavor. Consistently one of our earliest tomatoes to ripen in the field. Uralskiy Ranny is extremely easy to grow and produces high yields – especially for such small plants. A Russian commercial variety, when translated means “Early from Ural.” In
Deutsche Fleiss

70 days. Indet. Potato leaf.

Huge amounts of 1½-2” perfect ball-shaped, 2-3 oz fruit in clusters of 7-8. Red and juicy with good tart tomato flavor. Good storing ability both on and off the plant. Deutsche Fleiss translates to ‘German diligence.’ It is consistently one of our highest yielding varieties. A Seed Ambassadors Project variety sourced from Gerhard Bohl, a seed collector in Germany. He said that out of the thousands of tomato varieties he’s collected, Deutsche Fleiss is one of his favorites, and we can see why!

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Giant of Siebenburgen

80-85 days. Indet.

Big, red oxheart shaped, 12-18 oz fruit with tender skin. This is a giant tomato, good for fresh eating but best broiled or cooked into soup or sauce. Sometimes one fruit is too much for one person to eat all at once. Late but high yields. We wait every year for this one to ripen and are never disappointed because the flavor is incredibly good, shockingly sweet and rich. Did we mention this tomato is huge? Originating in Siebenburgen, the seven medieval cities established by the ethnic German Saxons in Transylvania, Romania. Siebenburgen is not synonymous with Transylvania but is part of its cultural makeup. Given to The Seed Ambassadors Project by Gerhard Bohl in Germany.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Astrakhanskie

70-75 days. Indet.

Big, red beefsteak variety from the Astrakhan region of Russia. Always a big hit in our tomato patch. The appearance alone is all we could want in a beefsteak, and with flavor to match, Astrakhanskie is one of our go-to varieties when harvesting for the kitchen. What really gets us is the earliness and high yields. Large, red fruit have a flattened oblate shape with some attractive ribbing and can reach up to 1 lb. Best flavor when slightly under ripe. Tall, floppy vines are productive for an heirloom. We received it originally from Tatiana Kouchnareva, the creator of the wonderful website Tatiana's TOMATObase. She received this variety from Andrey Baranovski of Minsk, Belarus.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Maria Nagy Giant

85 days. Indet.

Large, perfect 10-16 oz globes have a really sweet, rich flavor. Late to come on but very productive once it gets going. The flavor is just incredible, making it well worth the wait. We all have our ideal red slicer criteria and this one meets ours for flavor, size, texture, and yield. We received this variety from seed steward Maria Nagy in Turda, Romania. When she gave it to us during our Seed Ambassadors trip to Transylvania in 2008, she said she had harvested 8 kilos (17.6 pounds) of 7-8 oz fruits in a single harvest.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $13.00

Did you know that we grow just about everything in this catalog ourselves? Including every single one of the over 100 tomato varieties you see here. And if we didn’t grow it, we say who did right in the variety description. See our full list of small grower collaborators on page 10. Farmer Direct!
lfs) of fruit from one plant! It is one of the heritage tomatoes farmers in her area once grew and many wish they still did.

**Pilu KS**

70-75 days. Indet.  
High quality, red greenhouse tomato bred in Germany for biodynamic agriculture. Seemingly endless clusters of 6 or 7 fruit can be harvested vine ripened by the bunch. The tennis ball shaped, 3 oz tomatoes make us think, “Wow! Can a tomato be more round?” Fruit begin ripening mid season and continue to produce well into the fall after most other tomatoes give up. Firm enough for wholesale and/or making the trip to market, and juicy, too. Flavor is very a good balance of sweet and acidic. In Northern European greenhouse production, the tall plants are usually heavily pruned to reduce risk of leaf diseases. Alternatively, we plant Pilu KS outdoors, using a Florida weave and minimal pruning with great results. Proven resistance to Cladosporium (tomato leaf mold) and Fusarium. A rock star that is great for main season outdoor production in Oregon. Bred in Germany by Richard Specht and released by Kultursaat, an organization that helps fund and register plant breeding projects in the European Union.

Packet = 30 seeds, $3.50  
2 g, $12.50 
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Piroka**

75 days. Indet. A very delicious main season fresh slicing tomato. The medium-large, bright red globes are 5-7 oz and very productive. Selected for greenhouse production, Piroka also performs well outside. Great as a salad tomato or sliced on sandwiches. We want to grow it every year, given to The Seed Ambassadors Project by Gerhard Bohl, a seed collector in Germany.

Packet = 30 seeds, $3.50  
2 g, $12.50 
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Sasha’s Altai**

75 days. Semi-det.  
Another great main season, 4-6 oz, red tomato from Siberia that’s perfect for fresh eating. We are starting to specialize in Russian and Siberian tomatoes. Sasha's Altai comes with a very special seed-explorer-romantic story. It was originally brought to the US from Iurkuts by seedsmen Bill McDorman as part of one of the first and most important introductions of tomato diversity from the former Soviet Union. He received it from a very generous gardener named Sasha, who said it was the best tomato in Siberia. Sasha walked 35 kilometers (21.75 miles) each way to his home in the mountains and back just to give the seed to Bill. Famous now for its flavor, it was chosen by Organic Garden Magazine as one of the 10 best early tomatoes in the world.

Packet = 30 seeds, $3.50  
2 g, $12.50 
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Sascha’s Altai**

75 days. Semi-det.  
Another great main season, 4-6 oz, red tomato from Siberia that’s perfect for fresh eating. We are starting to specialize in Russian and Siberian tomatoes and for good reason—they’re awesome. Sasha’s Altai comes with a very special seed-explorer-romantic story. It was originally brought to the US from Iurkuts by seedsmen Bill McDorman as part of one of the first and most important introductions of tomato diversity from the former Soviet Union. He received it from a very generous gardener named Sasha, who said it was the best tomato in Siberia. Sasha walked 35 kilometers (21.75 miles) each way to his home in the mountains and back just to give the seed to Bill. Famous now for its flavor, it was chosen by Organic Garden Magazine as one of the 10 best early tomatoes in the world.

Packet = 30 seeds, $3.50  
2 g, $12.50 
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Starfire**

70 days. Det.  
With its big yields of 7-10 oz, plump red slicers, Starfire is a really good production tomato for the Willamette Valley. It would probably perform very well throughout the Pacific Northwest, if not the entire northern US. Flavor is very good and it’s nicely...
juicy. The vigorous bushy plants have a concentrated fruit set that we find very reliable. Starfire is a great name for this fiery red star of a tomato. Developed in 1963 at the Morden Experimental Farm in Manitoba, Canada. Our original source is from Victory Seeds who received it from USDA GRIN. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

Many of the more famous pear types, such as Cuneo, tend to be a little too late and susceptible to blossom end rot. However, Belmonte Pear is perfect. We sourced our original seed from a wonderful small seed business called The Sample Seed Shop and they say they received it from a friend who sourced it from an Italian seed company. According to their research, it originates from an oxheart/Marmande cross, which may explain some of its earliness and forgiving nature. There is a pink oxheart Italian tomato out there with the same name, however it is a different variety. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

De Berao Braun SAP
Maroon/Brown. 65-70 days. Indet. Plum-shaped fruit are a wonderful maroon-brown color with a little green on the shoulders. Big, vigorous plants provide extremely high yields of fat, 2-3 oz fruit that are good for sauce. A Russian variety named after the hats Russian cavalry once wore. Given to The Seed Ambassadors Project by seed saver Gerhard Bohl in Germany. Aka, De Berao Black. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

Egg from Phuket SAP
White/Pink. 60-65 days. Indet. Early producer of loads of small, white-pink, 1 oz egg-shaped fruit on rampant vines. Flavor is good for a Thai tomato, and a little tart. Most Thai tomatoes are meant for cooking in stir-fry, curry, or Thai salad and therefore selected very differently than Western tomatoes. Will hold shape when cut in half and stir fried. A very unique tomato. Collected in Thailand by Ulla Grall, proprietor of Bio-Saatgut seed company in Germany. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

Fakel SAP
Red. 70-75 days. Det. Deep red, 2½” slightly oval, 2-3 oz fruit with excellent sweet flavor on vigorous plants that are extremely prolific, even in cool conditions. Juicy and thick walled, these paste-type fruit are good for processing and also fresh eating. Fruit detaches without calyx. Russian variety, first brought from Moscow to Oregon by Kate Gessert, who was a leader of horticultural tours in the former Soviet Union and author of The Beautiful Food Garden. It then found its way to the Heritage Seed Library in England and we brought it back to Oregon. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

Graham’s Good Keeper SAP
Red. 65 days. Indet. An excellent variety for eating fresh, cooking, or use in sauce. Fat, oval, 4-6 oz fruit are firm, meaty, slightly juicy but not at all watery. Most tomatoes that are keeper varieties come on late in the season and don’t taste great fresh, but Graham’s Good Keeper is good right off the vine and matures earlier. Fruit are beautiful, resist cracking, and store well on the counter. Reported to be a very old variety, but no historical information is available. Currently available. It is offered by one Canadian seed company but otherwise not commercially available in the US. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

Grappoli d’Inverno SAP
Red. 60-70 days. Semi-det. Not for fresh eating. Small bushes ripen early with 1-2 oz, plum-sized fruit that keep very well once picked. Unimpressive when eaten fresh, the flavor transforms into deliciousness once dried. It’s also good roasted. A selection of a type of tomato with strains grown in many regions of Italy for winter storage. Fruit is tied in ristras, hung in a cool place and stored for months. We saw this done in Italy and have successfully done it ourselves, making for the perfect homemade pizza topping all winter long. Grappoli d’Inverno means ‘bunches of winter’ in Italian. Packet = 30 seeds, $3.50 2 g, $12.50 1/2 g = 150-250 seeds, $6.50 1/4 oz, $28.00

</table>
Iraqi Heart

Pink, 8-10 oz fruit are shaped like an oxheart or Amish paste. Very meaty with a rich flavor. Great for cooking and slicing. Yields heavy fairly late in the season and likes the heat. Possibly brought to England by a military officer after World War II. Received as *Irakische Herzformige* from Gerhard Bohl, a seed collector in Germany.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Jory

Red, 60 days. Indet.

This tomato had us at Hello! Vigorous vines produce a truly multi-use tomato. Oxheart shaped but much earlier than any other oxheart we have grown. When irrigated well it is incredibly juicy, sweet and delicious, and very high yielding of 8-12 oz fruit. Produces extremely well late into the season, especially for such an early variety. Jory was grown throughout the Willamette Valley for canning in the 1920s, most likely dry-farmed, and is therefore a good candidate for dry farm production now. The canned tomatoes of United Growers Inc. were proudly labeled with the Jory name at least into the 1950s. This is another variety that comes to us from seed collector Jeanne Berg of Your Hometown Harvests and Queener Farm – it seems the old timers love to give heritage commercial varieties with her and we love that she shares them with us.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Lämpchen

Yellow, 70 days. Indet.

High yielding, thick-walled, yellow paste type with 2-4 oz fruit that is also good eaten fresh. Similar to de Berao types. Seems to be fairly disease resistant and does not suffer from blossom end rot. Holds quality exceptionally late into the season and is perfect for making yellow tomato soup. One of many varieties given to The Seed Ambassadors Project in 2007 by Gerhard Bohl, a seed collector in Germany.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Maria Nagy Heart

Red, 80 days. Indet.

A Transylvanian tomato with exceptionally rich and sweet flavor. Late but productive. Large, meaty, pear shaped 8-12 oz fruit are good for eating raw or for sauce, and taste incredible when roasted with basil, salt and olive oil. Received from seed steward Maria Nagy in Turda, Romania, during our Seed Ambassadors trip. She gestured that the fruit is the size of her two fists together – or maybe she was waving her two fists in the air to show us that this tomato is a champion? Both interpretations would be accurate. A heritage type becoming rare even in its historical home. Aka, Maria Nagy Pear.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Napoli Roma

Red, 70 days. Det.

A commercial production tomato, bred for early maturity and concentrated yields. Medium sized plants grow to 4’ tall and produce large quantities of 2-3 oz, meaty, Roma-shaped red fruit with a small point on the blossom end. Good for processing into sauce or for canning whole once peeled. Raw flavor is very good for a Roma, perfect to eat fresh in salsas and salads. With their great yield and flavor, this is one of our best sauce tomatoes. For us they are resistant to cracking, blossom end rot, and Fusarium wilt. Aka, Napoli Paste, Napoli VF.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Principe Borghese

Red, 70 days. Indet.

Classic Italian sun drying tomato. Red pointy plums with thick flesh and skin. Often listed elsewhere as determinate, we’ve designated it as indeterminate because its viney plants grow tall enough for a trellis, and yield very late into the season. Principe Borghese are usually dried for winter use, but they are also delicious fresh and make a great addition sliced and roasted, tossed on pizza. We slice the 1oz fruit in half and put them in our dehydrator. Plants can be brought in at the end of the season to ripen any remaining unripe fruit. Many people simply hang the pulled plants in a shed or garage. Another way of preserving them is to hang the clusters inside and they will usually keep for weeks or longer.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Quadro

Red, 70 days. Indet.

Vigorous, medium-sized, 2-4 oz, multi-use Roma with great flavor. Bred in Germany for late blight resistance, and for growing outdoors or in the greenhouse. High yields late into the season. Moderately juicy paste is good for many uses – we love it for salsa! Blocky, almost cubic shape, probably why it is named Quadro. Bred by Dr. Hartmut Spiess with support from Kultursaat, a German foundation that funds biodynamic plant breeding. Collected by The Seed Ambassadors Project in 2007 from Bingenheimer Saatgut, a German biodynamic seed company.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Ropreco

Red, 65 days. Det.

Productive and early, this heirloom Italian sauce tomato yields 2-3" red, plum 2-3 oz fruit that have a small point at the blossom end. Very good raw flavor compared to other paste tomato varieties. A good choice for short season or cool summer locations. Can out yield Roma, especially in cool summers. Shows resistance to Fusarium and blossom end rot.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Saucey

Red, 70 days. Det.

An early paste variety with small bushes that heavily produce clusters of plum-shaped, dense, 2-3 oz red fruit with good flavor. Resists blossom end rot, to which so many other sauce tomatoes are susceptible. Very reliable and early compared to the ubiquitous Roma variety. Released in 1993 by Dr. Jim Baggett of Oregon State University.
Aka, Saucy.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50

Siberian Orange

Orange, 80 days. Indet.

Plump, pear-shaped paste tomatoes are amazing cooked and also delicious for fresh eating. A brilliant orange sherbet color, incredibly sweet and fruity. Makes candy sweet orange tomato sauce that would make phenomenal ketchup. Tall, wispy vines produce 4-8 oz fruit with very few seeds. We have planted it in the greenhouse for a bountiful harvest, but it does fine outside with good fertility. Given to us by Gerhard Bohl in Germany and one of his favorites of the over 3,000 tomatoes he grows. (And you thought we grew a lot of tomatoes!!) We received it as *Sibirische Orange* which means Siberian Orange in a strange half translated way. Sorry for the slight renaming, we know there are a few people out there who will not approve.
Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
**Dwarf Lemon Ice**

Yellow. 65 days. Indet. Dwarf.

**NEW for 2020!** Very aptly named, Dwarf Lemon Ice has clear skin and yellow flesh that combine for an icy yellow color. Mini, oxheart shaped fruit have a pleasantly balanced sweet/tart flavor. Meaty, 3-7 oz have a blunt point at the blossom end. Occasional green shoulders. A unique and fun variety that is also good for containers. We like eating these ones right off the plant. Dwarf Lemon Ice was released in 2016 by the Dwarf Tomato Project and is an Open Source Seed Initiative dedicated variety.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Justnya**

Orange. 65-70 days. Semi-det.

In our 2018 tomato trial, this orange tomato surprised us with its sweet flavor, which enthusiastically earned it a spot in our catalog. 2-3" tall, plum shaped, 1-2 oz fruit are bright orange with a pointy tail on the blossom end. Plants have a wispy growth habit that reaches about 3" tall. Justnya was selected and stabilized by Tatiana Kouchnareva from a cross made by Tom Wagner between Mountain Rose paste tomato and an F2 of Sun Sugar cherry tomato. Named after Justnya Kowalczyk, a well-known Polish cross-country skier.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Native Sun**

Yellow. 55-65 days. Det.

Possibly the best super early yellow determinate tomato we have. Flavorful 3-4 oz lemon yellow fruit. As early as subarctic tomatoes with much more flavor and larger size. Multiple concentrated yields on healthy bushes. Crack resistant and blemish free. Oregon-bred by Tim Peters of Peters Seed and Research.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Orange King**

Orange. 65 days. Det.

One of the best producers of early 4-6 oz, meaty orange globes. Blemish free and durable fruit form on bushes that are easy to cage. A really excellent variety for market and it has great sweet, fruity flavor. There are a few varieties with this same name but this Orange King was bred by Tim Peters of Peters Seed and Research in Oregon.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Orange You Glad**

Adaptive Seeds Original. For your gardening fun, here is a new "child" we have released into the world. Orange You Glad we dehybridized Orange Blossom so you can save seed from it too!? In 2012, we named New Mama Super Sweet Corn one of their customers. Orange You Glad is easier to raise tomatoes than With very early and productive plants ripen clusters of ball-shaped, 2-3 oz golden yellow fruit. Good sweet and tangy flavor. Fruit remain fairly firm when fully ripe and keep well. Although it is not the earliest tomato, it is reputed to be fairly cool weather tolerant and we have found it to thrive in cloudy weather. This trait certainly must have evolved in a place like Scotland, where this tomato originates. Given to the Seed Ambassadors Project by the Heritage Seed Library in England.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Sungella**

Orange. 60-70 days. Indet.

1-2" wide, sweet, orange globes are small but larger than cherry tomatoes. Plum-sized, 1-2 oz fruit with deliciously sweet flesh. Very productive and cold tolerant. A Sungold F1 dehybridization, Sungella is bigger and much more split resistant. This is one of only a few tomato varieties that has ever produced high quality fruit for us from the greenhouse well into November. Originally offered by the English seed company, Thompson and Morgan, bred by one of their customers.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Scotland Yellow**

Yellow. 70 days. Indet.

Productive plants ripen clusters of ball-shaped, 2-3 oz golden yellow fruit. Good sweet and tangy flavor. Fruit remain fairly firm when fully ripe and keep well. Although it is not the earliest tomato, it is reputed to be fairly cool weather tolerant and we have found it to thrive in cloudy weather. This trait certainly must have evolved in a place like Scotland, where this tomato originates. Given to the Seed Ambassadors Project by the Heritage Seed Library in England.

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Gregory’s Altai**

70 days. Indet.

Medium-large pink beefsteaks with long, eyelash-like calyx. 8-16 oz fruit ripens much earlier than other large pink tomatoes. Produces lots of slightly flattened globes with excellent flavor. Definitely one of our favorite slicing tomatoes. Originating near the Altai Mountains in Novosibirsk, Siberia, near the Russia-China border.

Packet = 30 seeds, $3.30  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

---

**Amber**

Yellow. 55-60 days. Det. Dwarf.

This was one of our earliest and tastiest tomatoes in 2010, which was for many gardeners in our area, “the year of late, bland tomatoes.” 1-3 oz, yellow-gold globes are plentiful and early, yielding for quite a while despite being determinate. One of the only yellow tomatoes we grew for market and CSA.

*With very compact and early plants, Amber is dwarf enough for container culture. Russian origin.*

Amber

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

**Azoychka**

Yellow. 65-70 days. Indet.

Earlier than most other beefsteak types, this gorgeous, 3-5" round oblate, 6-12 oz, yellow beefsteak comes on strong in those smaller size. Multiple concentrated yields on healthy bushes. Crack resistant and blemish free. Oregon-bred by Tim Peters of Peters Seed and Research in Oregon.

Azoychka

Packet = 30 seeds, $3.50  
1/2 g = 150-250 seeds, $6.50  
1/4 oz, $28.00

---

**Bringing Biodiversity Back**

Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well-watered. Up pot seedlings into 4" pots once they have two true leaves. Transplant into the garden once danger of frost has passed, late May in western Oregon. Collect seeds from ripe fruit by squeezing into a jar and add 25% more water. Wait a few days for mold to form. When seeds sink and gel-sac is gone, decant and rinse to clean. Dry thoroughly.

---

**Tomato, Orange & Yellow**

*Solana lycopersicum*

### GROWING & SEED SAVING BASICS

Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well-watered. Up pot seedlings into 4” pots once they have two true leaves. www.adaprive.com
Katja

60-70 days. Indet.

Bushy plants produce big, pink, 3-5” slicing tomatoes that weigh 8-16 oz. Very early and reliable. Gorgeous and delicious. Sarah thinks this is our best tomato (“objectively”) and Andrew thinks it is one of our favorites (subjectively). Does very well even in cool, shaded gardens. Ripened a tasty 1 lb fruit (and many smaller fruit) outdoors at Corvus Land Farming Land in Neskon, Oregon, in the summer of 2010—the year of no ripe tomatoes for many Oregon coast gardeners. Originates in the city of Shyudyanka, on the shores of Lake Baikal in Siberia, where it is also grown outdoors. It is not clear whether it was developed by Katarina Kononova Sviatova (Katja herself), or if it is an old Russian commercial variety. Received from Soren Holt of The Toad’s Garden blog, and Fresamlerne, the Danish seed savers, who received it from the Sviatova family.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Pruden’s Purple

70-75 days. Indet. Potato Leaf.

This is one of the more common tomato varieties that we feel compelled to add to our catalog because it’s just so excellent. Beautiful, giant, pink fruit that no tomato lover could possibly resist. Earlier to mature and more productive than the classic Brandywine, Pruden’s Purple still develops that sweet heirloom flavor even in cool summers. Silky texture is great for fresh eating, whether on sandwiches or just sliced up so much better in our climate. If you like that really makes it a winner is that it sweetens up really well. The thing thing that really makes it a winner is that it sweetens up really well.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $38.00

Rosabec

60-70 days. Det.

An awesome early pink slicer tomato from Quebec with 6-8 oz, globe shaped fruit, excellent yield and flavor. Blemish free and good firmness make Rosabec a great market variety. Tall, determinate bushes are easily caged or staked with a Florida weave trellis. Bred by Roger Doucet in 1975 at the Station Provinciale de Recherches Agricole in St. Hyacinthe, Quebec, Canada.

Packet = 30 seeds, $3.30
1/2 g = 150-250 seeds, $6.50
1/4 oz, $30.00

Sarah Purple

65-70 days. Indet.

Early, very round, 4-8 oz pink fruit. Excellent, juicy, and flavorful. Thin skin is blemish free and tender. Sarah Purple is very delicious pickled ripe from the vine. Vibrant pink fruit are captivating to look at. With limited historical information available, we think it is an old-fashioned heritage variety from Germany. Given to the Seed Ambassadors Project in 2007 by Gerhard Bohl, a seed steward in Germany.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $28.00

Siberian Giant Pink

80 days. Indet.

Truly giant, 12-16 oz, pink beefsteaks form on tall, floppy vines. Deliciously juicy and meaty. Siberian tomatoes are usually on the early side but this special variety is an exception. Like other main season tomatoes, the yield is huge but concentrated later in the season. Siberian Giant Pink fills the role that Brandywine is known for, but we like it better in every way; it was our Tomato of the Year in 2016. Sourced originally from Tatiana Kouchnareva, the creator of the wonderful fact-filled website, Tatiana’s TOMATObase. Tatiana originally received this variety from Tamara Yaschenko, a tomato collector from Siberia. Known in Russian as Sibirsky Velikan Rozovyi.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $38.00

Tiffen Mennonite

80 days. Indet. Potato Leaf.

Big, pink, 12-16 oz beefsteak fruit are somewhat variable in shape – many with a rather ribbed appearance while some are a more flattened globe shape. We find it to be earlier to mature and heavier yielding than the ubiquitous Brandywine and recommend growing Tiffen Mennonite instead. The thing that really makes it a winner is that it sweetens up so much better in our climate. If you like big, richly sweet heirlooms, this one is for you.

Packet = 30 seeds, $3.50
1/2 g = 150-250 seeds, $6.50
1/4 oz, $38.00

</table>
Has even won a few tomato taste-offs here in Oregon (we are not making this part up)! Heirloom variety from the Mennonites of Wisconsin. First introduced to Seed Savers Exchange in 1985 by Thane H. Earle of Whitewater, Wisconsin.

**TOMATO, OTHER COLORS**

*Solanum lycopersicum*

**GROWING & SEED SAVING BASICS**

Sow indoors in flats with good potting soil as early as February, but no later than April. Keep warm and well-watered. Up to pot seedlings into 4” pots once they have two true leaves. Transplant into the garden once danger of frost has passed, late May in western Oregon. Collect seeds from ripe fruit by squeezing into a jar and add 25% more water. Wait a few days for mold to form. When seeds sink and gel-sac is gone, decant and rinse to clean. Dry thoroughly.

**Cascade Village Blue**

Indigo/Red. 75 days. Indet.

This lovely indigo saladeet type tomato holds well on and off the vine, is beautiful, and tastes great, too. Dark purple-skinned, 3 oz globes ripen to red on the bottom, often with an awesome red star shape that forms under the calyx common to indigo tomatoes. Flesh is red, foliage has a very pale cream color. Flavor is very mild with a subtle sweetness. Good keeping qualities and very high yields. We have found it to yield well but late. A good variety to add to rainbow tomato dishes. White tomato types are generally lower in acidity so if that’s a problem for your digestion but you still want to eat a fresh tomato, Fantome du Laos is the variety for you. According to Tatiana’s TOMATOBase, this variety is from Laos, “where there’s a tale saying that when ghosts are afoot, it will glow in the dark.” This rings true to us as we know there are many ghost stories in Southeast Asia, where the spirit world is taken very seriously, particularly in hill tribe communities. If you think your garden is haunted, this tomato may help you discover the truth!

**Antique**

White. 80 days. Indet.

3-4” lobed, 6-8 oz tomatoes ripen to a very pale cream color. Flavor is very mild with a subtle sweetness. Good keeping qualities and very high yields. We have found it to yield well but late. A good variety to add to rainbow tomato dishes. White tomato types are generally lower in acidity so if that’s a problem for your digestion but you still want to eat a fresh tomato, Fantome du Laos is the variety for you. According to Tatiana’s TOMATOBase, this variety is from Laos, “where there’s a tale saying that when ghosts are afoot, it will glow in the dark.” This rings true to us as we know there are many ghost stories in Southeast Asia, where the spirit world is taken very seriously, particularly in hill tribe communities. If you think your garden is haunted, this tomato may help you discover the truth!

**Fantome du Laos**

White. 80 days. Indet.

3-4” lobed, 6-8 oz tomatoes ripen to a very pale cream color. Flavor is very mild with a subtle sweetness. Good keeping qualities and very high yields. We have found it to yield well but late. A good variety to add to rainbow tomato dishes. White tomato types are generally lower in acidity so if that’s a problem for your digestion but you still want to eat a fresh tomato, Fantome du Laos is the variety for you. If you think your garden is haunted, this tomato may help you discover the truth!

**Darby Red and Yellow**

Red with Yellow Stripes. 60 days. Indet.

Fairly early medium-sized, 2-4 oz, red fruit with yellow tiger stripes. One of the best striped tomatoes with excellent flavor, vigorous growth and high yields. Produces perfectly beautiful striped fruit for display on the tomato table at market and is a colorful addition to mixed quarts or flats. Developed in the 1960s by Dr. Lewis Darby of the Glasshouse Crops Research Institute in Littlehampton, England. Given to The Seed Ambassadors Project by Lila Towlle, fellow Seed Ambassador and member of Frosamlerne, the Danish seed saving group.

**Paul Robeson**

Maroon/Brown. 75-80 days. Indet.

Gorgeous color of deep red blended with chocolate-black that is rightly associated with delicious flavor. This category of tomato (which includes Sarah Black, Mavritanskite, Lila Sari, Sokolades and many others) is typically so rich, sweet and almost smoky that one would be justified in giving up all other tomatoes. We won’t go that far, but it is very nice to have tomatoes that get this tasty in our cool Pacific Northwest climate. Paul Robeson is our maroon/brown tomato of choice for market farm production because it rarely cracks, is blemish free, and is high yielding of 6-12 oz fruit even in less than optimal conditions. Originating in Russia and named in honor of the great social activist, opera singer, star athlete, and actor, Paul Robeson. Among his many accomplishments, he was the first black actor known to play Othello in the US. Arguably one of the most important and forgotten figures of the mid-1900s and early civil rights movement. He was a political activist inspired by the egalitarian anti-racism ethics of Marxism and had strong communist sympathies. This resulted in his being blacklisted from American establishment culture and in 1950, his passport was revoked due to his work with the anti-imperialist movement. We hope to do our part to help re-popularize his story.

**Pigletwillie’s French Black**

Maroon/Brown. 75 days. Indet.

Dark, 2-3” fruit weight 2-3 oz and have a full-bodied meaty taste. Not a true black tomato, but very dark red with chocolate shoulders. Fruit ripens in clusters of 4 or 5 and can be harvested by snapping the cluster stem. Sometimes a name is all you need to know when deciding to grow a variety. When a customer sent us this seed a few years ago, we were on the fence about growing unique colors and an excellent smoky rich flavor. This is a really great tomato. Latvian heirloom we originally sourced from Madeline McKeever of Brown Envelope Seeds in Ireland.
Piagetwille's French Black, even with the amusing name. But since that customer was John Miller from the Old Schoolhouse Planter in Vermont, a nurseryman with an eye for good varieties (and our original source for Cilician Parsley), we decided we had to grow it. John's hunch is that this tomato originally came from former garden blogger Piagetwille, who was on vacation in France some years back. Aka, Piaget Wille's French Black.

Packet ≈ 30 seeds, $3.50 2 g, $13.00
1/2 g ≈ 150-250 seeds, $6.50 1/4 oz, $38.00

Sarah Black
Purple/Brown. 75-80 days. Indet.

Sturdy 6" vines, good yield of 3-4" flattened globes. 8-12 oz fruit are purple-black-maroon with green shoulders and slight cracking on the top. Taste is excellent, possibly the best of this color type. Rich, deep flavor, some sweetness, smokiness and extra complex flavors. Schwarze Sarah in Germany. A German heirloom we received from Gerhard Bohl, a seed steward in Germany.

Packet ≈ 30 seeds, $3.50 2 g, $13.00
1/2 g ≈ 150-250 seeds, $6.50 1/4 oz, $38.00

Sokolades
Purple/Brown. 70-80 days. Indet.

Plants are high yielding of large, 6-12 oz globes with a rich brown color. Excellent, complex, and delicious flavor common to many so-called black tomatoes. Latvian heirloom that consistently grows very well here in the Willamette Valley. We have found it to be one of the most reliable and best producers of this type. Reminiscent of the classic variety, Cherokee Purple, but we like it much better. Given to The Seed Ambassadors Project by the Irish Seed Savers. May also be known as Doon Major.

Packet ≈ 30 seeds, $3.50 2 g, $12.50
1/2 g ≈ 150-250 seeds, $6.50 1/4 oz, $28.00

Aki, Piglet Wille's French Black.

WHITE TOMESOL
White. 80 days. Indet.

White to yellow fruit are flavorful for a white tomato – very tangy and sweet. Slightly flattened fruit are mostly in the 4 oz range, but some reach 8 oz. Produces better than other heirlooms late into the season. We find White Tomesol to be more forgiving of difficult growing conditions than other white tomatoes that we've grown. If you have struggled with white beefsteaks in the past, we definitely recommend this one.

Packet ≈ 30 seeds, $3.50 2 g, $12.50
1/2 g ≈ 150-250 seeds, $6.50 1/4 oz, $28.00

Rutabaga, Major Dunne

B. napus. 80 days.

Nice, purple top rutabaga with smooth, uniform shape and golden skin. One of the most attractive rutabagas we have ever grown. They retain excellent texture and flavor even when they get very large. With the bulbous roots just at or above the soil surface, Major Dunne is nematode resistant. Once a commercial variety in Northern Ireland, however said to be from Scotland originally. Introduced in 1959, now dropped from the European seed trade. Probably named in honor of an early flying machine pioneer before WWI, Major John William Dunne. Given to the Seed Ambassadors Project by the Irish Seed Savers. May also be known as Doon Major.

1 g ≈ 250 seeds, $3.50 1 oz, $17.50
3 g, $6.50 1/4 lb, $40.00

Rutabaga, Nadmorska

B. napus. 80 days.

Large, green-topped rutabaga with golden flesh. Uniform, large, round, vigorous and early maturing with very little neck. Nadmorska has a slightly more mustardy flavor than the purple top rutabagas. We like this flavor a lot, making it a definite winter garden staple. We discovered this variety in a garden store in Lithuania during our 2006 Seed Ambassadors Project trip. Seed produced at Whisper Hollow Farm in Brownsville, Oregon.

1 g ≈ 250 seeds, $3.50 1 oz, $17.50
3 g, $6.50

TURNIP & RUTABAGAS

Brassica sp.

TURNIP, Aprovecho Hardy

B. rapa. 70 days.

Adaptive Seeds Original. This is our hardestiest turnip bred specifically for Oregon winters. Salvaged from the less than 5% of the surviving turnips from a population of Dr. Alan Kapuler's Six Root Grex Turnip. The rest of the population died after a hard 8°F frost at Aprovecho Research Center in Cottage Grove, Oregon. The diversity of root types was reduced but the result is strong, hardy, round turnips. We have since selected heavily for attractive root shapes and colors, which vary from white to purple to green-topped. Our favorites in the population are the bright white ones with combined purple and green tops.

1 g ≈ 250 seeds, $3.50 1 oz, $20.00
3 g, $6.50 1/4 lb, $40.00
1/2 oz, $12.00

TURNIP, Tokyo Market

B. rapa. 30 days.

Salad type turnip that is delicate yet crunchy with a distinct sweetness unlike other turnips. Very quick to mature, best grown in spring or fall. White, slightly flattened globe-shaped roots grow to 3" but we prefer to harvest and eat them at 2". Tokyo Market turnips are delicious raw in salads, sliced with salt, snacked on whole, or cooked. Greens are tender, nutritious, and delicious, too. We have long dreamed of adding this venerable open pollinated variety to our catalog and are excited to finally do so!

1 g ≈ 250 seeds, $3.50 1 oz, $17.50
3 g, $6.50
WATERMELON

*Citrullus lanatus*

**GROWING & SEED SAVING BASICS**

Sow indoors in 2-4" pots with good potting soil in May through mid-June. Transplant into the garden 1-2 weeks after sprouting to 2-3' centers and 6' wide rows. May also be direct sown when soil is warm. Young plants are sensitive; we recommend row cover to protect from insects and frost. To save seed, scoop (or spit) out seeds when you eat the fruit. Rinse off and dry. For seed purity, isolate from other *Citrullus lanatus* by at least ½ mile.

**Bozeman**

70-80 days.

Light-green skinned watermelon with some speckles. Oblong fruit are large (10-30 lbs) for such an early melon. Good flavor with pink-red flesh. Bozeman ripens well in our cooler Oregon summers with similar maturity to other early watermelons like Blacktail Mountain and Early Moonbeam. Thick rind enables long storage, providing delicious, crisp watermelon well into October. It is hard to grow good watermelons west of the Cascades in the Pacific Northwest, so it is great to have a variety that likes it here. The result of a breeding project initiated by Ken Fisher of Fisher’s Seed in Belgrade, Montana. According to his daughter Judy, Bozeman is a sister line selected by her uncle while the variety Far North was selected by her father. Thanks to Kendall Cikanek for the historical intel.

2 g = 35 seeds, $3.50  
6 g, $6.50

**Early Moonbeam**

75 days.

Delicious, sweet, yellow-fleshed watermelon. 3-8 lb fruit have attractive, light-green skin with dark-green tiger stripes, which makes them easy to tell apart from the red watermelons. An early maturing variety that is cool weather tolerant, always ripens in our short growing season, and is always sweet – may be the sweetest watermelon we offer. This excellence is probably because Early Moonbeam was bred by Dr. Alan Kapuler of Peace Seeds here in Oregon. Dehybridized from Yellow Doll F1, a favorite of organic farmers in the Pacific Northwest. Highly recommended for farms and gardens everywhere, we can’t say enough. *Seed produced by Avoca in Corvallis, Oregon.*

2 g = 35 seeds, $3.50  
6 g, $6.50

**Katanya**

75 days.

Round, ice box type fruit reach 10-15 lbs, and average 10” in diameter. Dark green, nearly black rind. Fruit have a pinkish red, sweet flesh that is quite a treat. This Russian heirloom is early and vines are quite vigorous, producing a lot of fruit until frost. Comparable to Blacktail Mountain but with larger fruit. Watermelon aficionados know that Russian watermelons are something special. We thank Terroir Seed for introducing us to this gem. Originally from a woman named Katanya who lives in northern Illinois.

2 g = 35 seeds, $3.50  
6 g, $6.50

**Nancy**

90 days.

The quintessential watermelon – classic flavor and so sweet! Green striped, oval fruit with pink flesh and white seeds grow to 25 lbs. Thin rind means you can eat almost all the way to the skin, however it also means that it does not store super long or travel very well. Produces fewer seeds than most watermelon varieties and the white seeds are thinner making them easier to ignore while eating. Said to have excellent drought and disease resistance, it grows well for us in challenging conditions with no trouble. An heirloom from the 1880s, when Nancy Tate discovered it growing in a cotton field in Georgia. Our original seed was given to us by melon enthusiast Jeremiah Johnson of Lebanon, Oregon.

2 g = 35 seeds, $3.50  
6 g, $6.50

**Winter King and Queen**

90-100 days.

A unique and rare winter keeper type watermelon. With light-green skin and pink-red flesh, these melons have a good sweetness and excellent flavor. Some refer to this type as a Christmas watermelon because once picked, it can be stored into December. We have eaten them for Thanksgiving and later into winter. Late maturing for the Northwest but this is no problem if you pick them in October with the winter squash before frost. Washington State University trials found Winter King and Queen to be high yielding in quantity of fruit and in total marketable weight with an average of 9 lbs per watermelon. They also reported it to be crack resistant. This variety is preferred by Mennonites in the Midwest for traditional watermelon pickles (both sliced vinegar pickles and brined whole fruit), as it is most similar to the type of melon early immigrants would have used. The vinegar pickle using Winter King and Queen is now listed on the Slow Food Ark of Taste. Once sold by R.H. Shumway’s, and Nichols Garden Nursery but no longer. We have been stewarding this watermelon since 2003 and are proud to have reintroduced it! *Seed produced by Avoca in Corvallis, Oregon.*

2 g = 35 seeds, $3.50  
1 oz, $18.50  
6 g, $6.50  
4 oz, $48.00

**HERBS**

**Angelica**

*Angelica archangelica.* 208-365 days. Biennial in zones 4-9. Angelica is one of those plants that seems ancient and archetypical. Plants are reminiscent of cow parsnip with similar large white-flowered umbels. Big, lobed leaves atop long hollow stems have a perfumed, sweet scent and flavor. Medicinal, ornamental and edible, Angelica is a plant that has been associated with humans for a long time. The giant flowers are full of nectaries that attract many beneficial insects such as honey bees, predatory wasps, hover flies and lady bugs. In the early summer, the flowering stalks are a favorite perch for Lazuli Bunting songbirds on our farm. Flowers can be used fresh or dried, giving a bold accent to bouquets. The stalks can be peeled and candied for a delicious treat. A true biennial that may take a few years to flower if not sown early in the spring. May self seed. Herbaly, Angelica is known to be energizing, warming and stimulating. Traditionally used to treat colds and respiratory issues. The roots are used to flavor gin and the seeds are used to flavor liqueurs such as Chartreuse, many bitters, and even Vermouth. Angelica is a truly useful and beautiful plant.

1/2 g = 90 seeds, $3.50

**Basil, Golden Mountain Sweet Thai Mix**

Ocimum basilicum. 60-70 days. *NEW for 2020!* An essential ingredient in many Thai dishes because of its classic sweet licorice clove flavor. Green leaves, purple stems and purple flowers form on compact plants that work well in containers. Received as a variable population, some plants are stout with larger, sweeter leaves that are less aromatic, while other plants are taller with smaller leaves that are highly fragrant and strongly flavored. We are selecting Golden Mountain Sweet Thai Mix to
find a balance between the two, but in the meantime are happy with the diversity, finding the larger sweeter leaves best when used fresh as a garnish, and the smaller more strongly flavored leaves more well suited for cooking. This variety originally stems from a commercial seed packet from Thailand sent to us from Sarah's dad, who lived there for over 20 years. It's taken a few years of selection, but we finally succeeded in getting enough plants to mature viable seed to be able to add it to our catalog.

**Basil, Italian Mountain Sweet**

*Ocimum basilicum*.

A strain of Italian sweet basil that is more cool weather tolerant than other basil. As the name suggests, it is from the mountains of Northern Italy via the seed company Seeds Trust, formerly located in Montana. They report that Italian Mountain Sweet grows better than other basil varieties in Montana and we find it also is a great pesto and Caprese salad. Slow in Montana and we find it also is a great basil. As the name suggests, it is from the Ocium basilicum.

**Basil, Thai Lemon**

*Ocimum citrourum*.

This refreshing, citrus basil is a different species than its sweet Italian basil cousins, and is essential in certain South and Southeast Asian dishes. Thai Lemon basil is delicious with seafood, or as a more complex flavorful alternative to sweet basil in almost any dish. It is best when added towards the end of cooking. Leaves are smaller and more pinnate, but otherwise it grows similarly to other basil types. We received our seed from villagers at Ban Noong Ta Klong in the Issan region of Thailand, while on a Seed Ambassadors Project trip in 2009. Aka, Hoary Basil, Hairy Basil, and Lemon Basil.

**Basil, Tulsi/Sacred**

*Ocimum tenuiflorum*.

Tulsi is one of the best herbs to grow for tea. It smells like heaven in a teacup and also in the garden when you walk by; when it's flowering, all of the little pollinators think so, too. The flavor is a little fruity with an accent of clove, making it seem slightly sweet. Sacred basil has been used for centuries in Ayurvedic medicine as an adaptogen and for helping to alleviate stress. Other strains of Tulsi are more commonly grown in tropical areas, however this temperate strain is more cool-weather tolerant than sweet basil and other sacred basil varieties. It produces lots of healing and delicious aromatics. This strain comes to us from Wild Garden Seed, who has been growing it since 1983. It can be traced back to the Abundant Life Seed Foundation, and is sometimes called the 'Abundant Life' strain. Aka, Tulasi, Kapoor Tulsi, Temperate Tulsi.

**Basil, Siracusa**

*Ocimum basilicum*.

A sweet Italian basil in the true Genovese style. Siracusa has a deep, sweet aroma that is oddly missing from some modern commercial basil. Bright green leaves are slightly smoother and less pointy than Italian Mountain Sweet. Flavor is delicious in pesto alla trapanese, aka Sicilian pesto, which uses almonds and tomatoes. Also perfect when simply chopped and tossed with pasta. Despite its Genovese style, this seed was found in Sicily by Lane Selman of the Culinary Breeding Network. She purchased it in a hand folded white envelope at a small garden store in Siracusa (Syracuse).

**Catnip**

*Nepta cataria*. Perennial in zones 3-9.

Catnip is a member of the mint family and is especially suited for gardeners whose household includes members of the cat family. Our cats love catnip and can often be found laying in the shade of the catnip patch on summer afternoons, but cats aren’t the only reason to grow catnip. Drought tolerant and deer resistant, it may also repel aphids, ants, flea beetles, and squash bugs, even as it attracts many types of beneficial insects. A strong infusion of catnip leaves has been said to repel fleas from carpets and pets. Leaves may be used as a culinary herb and may also be used medicinally by humans for relaxation and to aid sleep. Catnip also has a history of being used in treating digestive disorders, reducing fevers, and a whole slew of other ailments. Plants can reach 5’ in their second year. Germination is sometimes slow and unpredictable.

**Chamomile, Bodegold**

*Matricaria recutita*.

Bodegold is an improved German variety of chamomile with higher essential oil content, high yields, large flowers, and more uniform habit. The truly special trait of this variety is its delicious, sweet aroma that is significantly sweeter than other chamomile varieties. White petaled flowers have fragrant yellow centers. Chamomile is commonly used as a calming herbal tea and is said to stimulate the immune system. Flowers are ready to pick and dry any time, even after the petals have fallen off. Very attractive to pollinators. This is one of our favorite tea herbs. It should be in every garden. The compact plants grow 1-2’ and seeds are best direct sown, scattered on the soil surface. Strangely, chamomile seems to grow better in poor quality soil.

**Chamomile, Zloty Lan**

*Matricaria recutita*.

A unique Polish tetraploid variety. Tetraploid plants naturally have more cell chromosomes which usually results in larger and more vigorous plants. Zloty Lan is certainly bigger and higher yielding with a strong, tall growth habit. We find it has a wonderful aroma that is somewhat less sweet than Bodegold. The dried flowers steeped in hot water for less then a few minutes make a soothing and calming tea for relaxing the mind and body. When steeped longer than a few minutes however it may become stimulating and enlivening for some. Chamomile is an easy tea herb to grow at home and is one of the key herbs used in biodynamic compost preparations. Bred in Poland for commercial production and high essential oil content, reported to be between 0.8-1.5% of which 4-12% is bisabolol and 15-20% chamazulene. The compounds in chamomile have been extensively studied for their health effects, many of which are anti-inflammatory and anti-cancerous.

**Chervil, Great Green**

Chervil is a useful and unfailling winter herb that deserves to be more commonly grown. Flavor is reminiscent of fennel with lots of sweet, subtle notes. A carrot relative, its leaves are similar and almost fern-like. We grow it in full sun, but it thrives in part shade and under fruit trees. This vigorous strain has been selected for many years by Wild Garden Seed in Philomath, Oregon, for robust plants with a good, deep chervil flavor that easily survive winter. May self seed.

Chives, Polyvot
Allium schoenoprasum. Perennial in zones 3-10.

Produces bunches of dark green, pungent, onion flavored leaves that are very versatile in the kitchen. Plants grow to about 12” tall. Very hardy plants withstand neglect, can grow in full sun to part shade, and are great for containers. In midsummer, plants produce little, light purple, globe-shaped flowers that are also edible, pretty enough to grow as an ornamental, and provide a good nectar source for beneficial insects. Chives deserve a place in every perennial herb garden. Not only are they good in salads, sauces, and many other dishes, but you can substitute them for onions in a pinch. This is an improved variety, known for uniform, robust growth.

Clary Sage

An ancient herb used in Europe for centuries. Great aromatic plant to have nearby in the garden patch. We love to walk by blooming Clary Sage and just smell it. It always seems to clear and brighten our day. In aroma therapy, Clary Sage is said to help with anxiety and stress due to its warming, sedative qualities. Flowers are very attractive to bumble bees. Soak the seeds in water to make a mucilaginous eye bath, that is known to clear the eyes and clean out any irritants. Flowering tops have been used to flavor vermouth and other liqueurs. Leaves are edible. Descriptions of its medicinal use trace back to Greece in 4th century BCE. Cannot ship to Washington State.

1/4 lb, $50.00

Coriander, Kanchanaburi
Coriandrum sativum.

This large seeded coriander/cilantro has a fresh, aromatic flavor. Selected for seed production, the plants are shorter, earlier to flower, and have larger seeds than leaf type varieties. Although it is not the primary use, it also has tasty, aromatic leaves and roots that are useful in Thai food. Kanchanaburi coriander is a Thai variety from the town of the same name. It is a beautiful place in western central Thailand that the River Kwai runs through. We sourced our stock seed originally from Will Bonsall’s Scatterseed Collection, a priceless seed preservation project based in Maine. Aka, Kanchanaburi Coriander.

3 g = 120 seeds, $3.50

Coriander, Standby
Coriandrum sativum.

A must-have in the herb garden! Standby cilantro’s bright flavor freshens up any meal and is essential in so many cuisines worldwide – especially Latin American, Middle Eastern, Southeast and South Asian. Very hardy and slow bolting, it is excellent sow year-round, and especially in the late fall for winter harvest or an early spring. Strongly flavored, and appreciated and in fact repel some insects. As a cut flower this variety has a long shelf life.

1/4 lb, $25.00
1 lb, $50.00

Cilantro, Rak Tamachat
Coriandrum sativum.

Named for the Rak Tamachat Permaculture and Natural Building Education Center in Thailand, where we saved the seeds for this variety out of their kitchen garden when we visited in March, 2014. Since all we saw were the plants that had already gone to seed, we were surprised and delighted by what we discovered when we planted it out back at home. Leaves are giant when compared to every other cilantro we have grown – they can be up to 2” across! This large seeded coriander/cilantro is a deterrent. As a cut flower this variety has a long shelf life.

Dill, Ambrosia
Anethum graveolens. 35 days.

An amazingly fragrant variety of dill. Heavenly in the garden and a key ingredient for many pickle recipes. You can’t have too many jars of dilly beans in the pantry. Also delicious in borsch (beet soup), and cooked with fish or potatoes. Flowers are very attractive to pollinators. We sourced Ambrosia dill originally from Peace Seeds in Corvallis, Oregon. There is an Ukrainian or Russian variety of the same name, it may be the same but we’re unsure. Aka, Ambroja.

1 oz, $12.50
2 g, $6.80
1/4 lb, $25.00

Dill, Mt Adams
Anethum graveolens. 35 days.

Dill is a must have in any garden, and Mt Adams dill is a great early-to-flower variety perfect for seed and flower production. It is also a good producer of dill leaf but not as prolific as mammoto types. Dill is a commercial crop in Washington state, where many acres are produced for distilling into essential oil, as a seed crop, and for fresh markets. We picked up this variety from a seed swap in Bingen, Washington, where a local homesteader had been stewarding it for 20 years.

Feverfew, Medicinal
Tanacetum parthenium. 60-70 days. Perennial in zones 5-10.

This short lived perennial medicinal herb produces shrubby plants that grow to 3’ with small, non-double white flowers with a yellow center. Plants are highly fragrant with bitter aromatics that are not universally appreciated and in fact repel some insects. For this reason, it is sometimes planted as a deterrent. As a cut flower this variety has less dense flower clusters than improved versions, such as White Wonder Feverfew (see page 131). Leaves have been used medicinally for centuries in treating fevers, migraines, arthritis, stomach aches, and more. The US National Institutes of Health even acknowledges its “multifarious therapeutic uses,” including anticancer activity.

Packet = 130 seeds, $3.50
2 g, $12.00
1/2 g = 500 seeds, $6.00

Lemon Balm, Quedlinburger Niederliegende
Melissa officinalis. Perennial in zones 4-9.

Perennial. Living in the Northwest we have always wished we could grow citrus. You could try to grow lemons in a greenhouse or you could simply throw this lemon balm all around your garden. A strong lemon balm tea is a great substitute for lemon juice in many recipes. Quedlinburger Niederliegende is higher in essential oil content than common lemon balm, and is very productive as well. Lemon balm tea, when sweetened with honey, is used medicinally to help with stress, indigestion, and headaches. We have also used it when brewing mead (honey wine) with great success. This easy-to-grow perennial belongs in every garden. You may have noticed that we love strange names, and to translate/contextualize this tongue twister of a name is a delight. Quedlinburg is a town located in Germany, north of the Harz mountains, in Saxony-Anhalt. “Niederliegende” translates from German as procumbent, which is a botanical adjective meaning, “growing along the ground without setting forth roots.” This is interesting as we’ve observed this variety to be more upright than others.

Packet = 150 seeds, $3.50
3 g, $12.00
4 g, $18.00
1/2 g = 800 seeds, $6.00
1 oz, $18.00

Horehound, White
 Marrubium vulgare. Perennial in zones 3-9

Back for 2020! An attractive shrub with small, grey-green leaves that are covered in small white hairs, creating a fuzzy appearance. Tea can be made from the leaves and it is a favorite remedy for coughs (though it’s quite bitter so add honey). Horehound has long been noted for its medicinal qualities in treating numerous ailments. The essential oil is said to contain potent antimicrobial, antiseptic and anti-inflammatory properties. It has also traditionally been used as a flavoring for ales, sodas, and lozenges. Naturalizes easily and may spread, though germination can be slow and erratic. Best when direct sown in early spring or early fall.

Packet = 130 seeds, $3.50
2 g, $12.00
1/2 g = 500 seeds, $6.00

Flower for Brewing Mead
μ

Bringing Biodiversity Back
**Marshmallow**
*Althaea officinalis.* Perennial in zones 3-9.

An important part of the medicinal herb garden, as it has been used in remedies across many cultures for hundreds of years. Various preparations of marshmallow have been applied to the skin to treat poison oak, rheumatism, or quicken the blood. Teas have been applied to the skin to treat poison of years. Various preparations of mugwort remedies across many cultures for hundreds of years. Artemisia vulgaris.

**Mugwort**
*Artemisia vulgaris.* Perennial in zones 3-9.

An important part of the medicinal herb garden, as it has been used in remedies across many cultures for hundreds of years. Various preparations of mugwort have been applied to the skin to treat poison oak, rheumatism, or quicken the blood. Teas have been applied to the skin to treat poison of years. Various preparations of mugwort remedies across many cultures for hundreds of years.

**Motherwort**

New for 2020! Highly medicinal and intensely bitter perennial member of the mint family that grows to 3' tall and produces small purple flowers in the second year. Motherwort's flowering tops make a unique cut flower and its presence in the garden is also very ornamental. Tincture is made from the flowering tops, with stem removed, just as the first flowers open. Used medicinally across many herbal traditions for endocrine related issues, uterine health, cardiovascular function, anxiety, and more. We are attracted to its power as a heart calming herb. Self-sows. Aka, lion’s tail, throw-wort, lion’s ear.

Packet ≈ 200 seeds, $3.80

**Nigella, Black-Seeded Culinary**
*Nigella sativa.* 100 days.

New for 2020! Attractive blue flowers look a lot like the related flower, Love-in-a-Mist, but Black-Seeded Culinary Nigella is a different species with closed pod seed heads that keep seeds safe inside. Plants grow 8-12” tall and while it does not produce many flowers, each is high yielding of small, black seeds that smell like some kind of fruity fennel and taste like nutmeg and black pepper. A great dual-purpose edible ornamental. This medicinal spice has been used for centuries in South Asian and Middle Eastern cuisines and was reportedly even found in the tomb of the ancient Egyptian pharaoh Tutankhamun. Aka, Black Cumin, Black Seed, Black Caraway, Fennel Flower, Charnushka, Kalonji, Roman Corriander.

1/2 g = 150 seeds, $3.80
3 g, $7.00

**Oregano, White Flowered Greek**
*Origanum vulgare hirtum.* Perennial in zones 5-9.

With its pungent, flavorful leaves, this is possibly the best strain for culinary use. A must have for the perennial herb garden, oregano is essential in many Mediterranean dishes. Best used straight out of the garden but also delicious dried. We even use it as a northern-grown replacement for Mexican oregano (Lippia graveolens) in some recipes. Small, white flowers attract beneficial insects, including many bumblebees. Very easy to grow – does well in dry or wet conditions and is happy in containers, too. Greek oregano oil is used medicinally as an anti-microbial and anti-fungal. Formerly listed as *Origanum heracleoideum*.

Packet ≈ 400 seeds, $3.80

**Parsley, Cilician**
*Petroselinum crispum.*

A very rare and special parsley originally from a medieval kingdom located in what is present-day Syria and Turkey, and brought to North America via Cyprus. Cilician parsley has a more ferny leaf type, with an intense flavor that makes a great addition to any dish calling for parsley. Tolerates shade well, possibly preferring it. Some people think Cilician parsley may be a different species than the Italian flat-leaf or curly-leaf types, or possibly even a predecessor. The region of Cilicia has a long history of conflict and has been fought over by Greeks, Armenians, Syrians, Romans, and Turks. It is a cradle of agricultural biodiversity and a place few have heard of. We thank food writer William Woys Weaver for shedding light on this variety and piquing our interest, and to John Miller of the Old Schoolhouse Plantery in Brattleboro, Vermont, for sharing this great variety with us.

Packet = 200 seeds, $3.80

**Parsley, White Flowered Greek**
*Petroselinum crispum.*

A must have for the perennial herb garden, oregano is essential in many Mediterranean dishes. Best used straight out of the garden but also delicious dried. We even use it as a northern-grown replacement for Mexican oregano (Lippia graveolens) in some recipes. Small, white flowers attract beneficial insects, including many bumblebees. Very easy to grow – does well in dry or wet conditions and is happy in containers, too. Greek oregano oil is used medicinally as an anti-microbial and anti-fungal. Formerly listed as *Origanum heracleoideum*.

Packet ≈ 400 seeds, $3.80

**Parsley, Einfache Schnitt 3**
*Petroselinum crispum.*

New for 2020! Highly medicinal and intensely bitter perennial member of the mint family that grows to 3’ tall and produces small purple flowers in the second year. Motherwort’s flowering tops make a unique cut flower and its presence in the garden is also very ornamental. Tincture is made from the flowering tops, with stem removed, just as the first flowers open. Used medicinally across many herbal traditions for endocrine related issues, uterine health, cardiovascular function, anxiety, and more. We are attracted to its power as a heart calming herb. Self-sows. Aka, lion’s tail, throw-wort, lion’s ear.

Packet ≈ 200 seeds, $3.80

**Stinging Nettle**
*Urtica dioica.* Perennial in zones 3-10.

An indispensible perennial plant native to many northern regions throughout Europe, North America, and Asia. Grows wild or cultivated in cool, shady, and damp areas in all but the coldest or hottest environments. Loved for its nutrient-rich leaves that are used fresh as cooked spring greens, or dried for use in tea. Leaves are high in protein, Omega-3 fatty acid, and many vitamins and minerals including iron. Stinging nettle tea has so many health benefits it is impossible to list them all here. Beware, the plant earns its name from the small hairs found on the leaves and stems that cause quite the sting. The stinging sensation only lasts for a few minutes for most people but we recommend wearing gloves for harvest and to avoid touching the leaves until they are fully dried or cooked. Plants grow to 5’ tall and spread slowly via rhizomes. An important ingredient for biodynamic compost preparations and green manure liquid extracts.

Packet = 200 seeds, $3.80

1/2 g = 1,800 seeds, $6.00
Superior Licorice Mint  

*Agastache rugosa.* Perennial in zones 5-9.  

Very delightful, aromatic leaves with a sweet, minty licorice flavor. One of Andrew’s favorite herbs for tea, second only to wild yerba buena. The beautiful blue flower spikes can grow to 8” tall and provide excellent forage for beneficial insects. Blooms over a long period and especially well late in the season. Leaves are best harvested after flowering and make a delicious addition to salad mix. We like fresh leaves best for tea, but dried leaves are also good. Superior Licorice Mint can be harvested like basil by coppicing the young stems for continuous regrowth and cutting. As a healing plant, it can be helpful for cold symptoms. As an aromatic, it can stimulate digestion, circulation, and general energy. It’s also excellent as a beneficial insect forage. Wild Garden Seed recommends pairing it with fennel to attract and feed honey bees, birds, and other beneficial insects into autumn. Aka, Korean Licorice Mint. Seed produced by Wild Garden Seed in Philomath, Oregon.

1/2 g ≈ 500 seeds, $3.50

Tobacco, Massachusetts Wrapper  

*Nicotiana tabacum.*  

As folks that haven’t spent much time in New England, we were surprised to learn that Connecticut and Massachusetts have a 300 year history of producing premium tobacco for wrapping cigars. Warm summers, long day length, and high humidity provide favorable conditions for leaves that can reach 3' across and twice as long! After 18 months of processing, each of these giant leaves may become two cigars. Here in the Pacific Northwest with our cool temps and low humidity, the giant wrapper tobaccos don’t grow quite as large but are still very impressive, with leaves reaching 3’ long and 1½’ across at the widest point. Massachusetts Wrapper Tobacco grows to 7’ tall in our garden, with pretty light pink, trumpet shaped flowers atop the central stalk. Early maturing. We’ve never experimented with curing or smoking tobacco, but these leaves fared well in our taste test of dried, unfermented leaves. We don’t usually chew tobacco, and think the plants are worth growing for their ornamental qualities, unique size and shape. Also, tobacco may one day be useful again in bartering! We sourced this variety from Scott Weech at a seed swap in Eugene, Oregon.

1/4 g = 300 seeds, $3.30
1 g, $6.00

Yarrow, Danish  

*Achillea millefolium.* Perennial.  

Sometimes our penchant for seed saving goes a little too far – such is the case with Danish Yarrow. We saved seed from a bunch of plants growing along the roadside while out exploring the ruins of a 14th century castle about 12 miles from Aarhus, Denmark, during the first days of our Seed Ambassadors Project trip in 2006. A patch of this perennial now grows in the backyard, in deep shade (though it prefers sun), where its feathery grey leaves make a nice ground cover for most of the year. Yarrow is also an important herb in biodynamics; its lacy white flowers are used to make prep 502, to stimulate potassium, silica and selenium in the soil. Slowly spreads via roots and shattered seed, grows well even in poor soil.

Packet ≈ 400 seeds, $3.50
1/2 g = 2,000 seeds, $7.00

Check out our icon for cut flowers. Find it on all varieties (not just those listed under Flowers) that are considered suitable for fresh or dried bouquets.

FLOWERS

**GROWING & SEED SAVING BASICS**

Flowers have variable needs, thrive in different growing conditions, and have individual requirements for seed saving. Basic growing and seed saving information can be found on our website. Annual unless otherwise noted.

**Ageratum, Dondo Blue**  

*Ageratum houstonianum.* 45 days.  

NEW for 2020! Tiny fuzzy purple flowers form in nice sized clusters on long stems making a great filler for bouquets. Long season makes it great for the garden, too! Many modern ageratum have been bred to be dwarf bedding plants, but Dondo Blue maintains the taller stature loved for cut flower production. Stems of Dondo Blue found their way into almost every weekly bouquet we made from midsummer through frost, adding nice texture and complementary color. Deer resistant. May self-sow. Aka, Floss Flower, Bluemink.

Packet = 150 seeds, $3.80

**Artemisia, Sweet Annie**  

*Artemisia annua.* 120 days.  

We first became acquainted with Sweet Annie when we worked at Hayhurst Valley Organic Farm and Nursery, where our boss, talented farmer Kate Wilen, made beautiful garlic braids, everlasting bouquets, and wreaths. Sweet Annie, with its long, pliable branches, beautiful fragrance and delicate light green, ferny foliage provides an ideal wreath base. It doesn’t have showy flowers so it’s not much to look at in the garden, but the fragrance is divine. Tall, bushy plants can reach 6’ in height and over 3’ wide. Harvest for wreaths at onset of flowering. Traditionally used in Chinese medicine to treat fever, and more recently its main compound has been used in treating malaria. Will self-sow if allowed to set seed. Aka, Sweet Wormwood.

Packet = 500 seeds, $3.80

Calendula, Resina

A very fine strain of calendula for medicinal use, and as a self-sowing, short-lived perennial flower. Highly productive plants produce medium-sized flowers with two rows of resin-rich petals. Plants have either soft orange or bright yellow flowers with small centers. Fairly hardy in our climate, Resina often outwinters to produce very early blooms in the spring and even an occasional bloom in the dead of winter if grown in a sheltered location. We love to sprinkle our salads with their edible, aromatic petals. The rich, soothing properties noticeably soften the skin simply from picking flowers. Often called Tar Marigold in England.

2 g ≈ 150 seeds, $3.50
6 g, $6.25
1 lb, $180.00
1 oz, $21.00

California Poppy, Copper Pot

Eschscholzia californica. Perennial in zones 8-10.

NEW for 2020! A unique strain of California Poppy with satiny petals that are mostly dark red on the bottoms and deep dark orange on the tops. Since flowers open and close with the sun, the flower color appears to change from red in the early mornings to coperry by day then back to red in the evening. Blossoms sit atop feathery silver foliage. Best if direct sown in autumn or very early spring for flowers that start early and go until the heat of summer. We selected hard for dark red flowers but the occasional lighter colors (even white!) may appear. Will self-sow.

1/2 g = 200 seeds, $3.80
2 g, $6.80

California Poppy, Golden West

Eschscholzia californica. Perennial in zones 8-10.

This beautiful strain of the California state flower has been available since the early 1920s. Compact plants have ferny grey-blue foliage and grow to 18” tall. Light golden flowers have orange centers. Blossoms seem like beacons to native pollinators, especially bumblebees. Flowers open with the sun and close in the evening. Very low maintenance and drought tolerant, Golden West California poppy also tolerates poor soil conditions and naturalizes easily. The whole plant has been used medicinally as a pain reliever, sedative, and to treat anxiety and restlessness. Best sown in fall or very early spring. Will self-sow.

1/2 g = 200 seeds, $3.80
2 g, $6.80

Campanula, Dinner Bells

Campanula medium. Biennial.

Back for 2020! Bell-shaped, 2-3” flowers are good stuffed or whole in salad. Selected for edible flowers which are large purple or white and pleasantly peppery. Biennial that blooms only in its second year, but flowers profusely and is well worth the wait. A type of Canterbury Bells Campanula selected by Tim Peters of Peters Seed and Research formerly in Riddle, Oregon.

Packet = 175 seeds, $3.80
1 g = 3,200 seeds, $12.80
Large Packet = 650 seeds, $6.80

Celmia, Flamingo Feather

Celmia speciosa. 60 days. Perennial in zones 10-11.

NEW for 2020! Feathery silver/white flower spikes develop into a light pink that gets darker towards the tips. Soft texture begs to be touched and looks phenomenal in arrangements. A wheatstraw type, Flamingo Feather Celmia plants grow to 4’ tall producing many branches (up to 40!), each with a flower at the end. Flowers may be picked early when they are small, or if they remain on the plant they’ll just keep getting bigger until the end of the season. Dries well, too. Winner of a Royal Horticultural Society Award of Garden Merit.

Packet = 150 seeds, $3.80
2 g, $12.80
1/2 g = 500 seeds, $6.80
1/4 oz, $20.00

Coreopsis, Dwarf Red

Coreopsis tinctoria.

Annual coreopsis with dark red blooms. These small plants grow to about 1’ in all directions. They fit perfectly in tight spaces where a splash of color is desired, and look great in a pot on the porch. We like that the plants care for themselves with little help, and are very attractive to pollinators. Unlike the wild Tall Plains coreopsis, Dwarf Red is a quick bloomer and eager to get the flower party started. A North American native wildflower also used as a dye plant. Heat loving and drought resistant. Aka, Calliopsis, Tickseed.

Packet = 200 seeds, $3.50
1/2 g ≈ 1,000 seeds, $6.25

Coreopsis, Lanceleaf, Sternntaler

Coreopsis lanceolata. Perennial in zones 4-9.

Native to much of North America, Sternntaler lanceleaf coreopsis is a low maintenance addition to gardens and natural areas, and makes an excellent landscape plant. Daisy-like flowers have yellow petals with toothed edges and small red spots towards the center. Blooms May through July. Compact plants produce lots of flowers that may be cut for arrangements, but the stems are not as long as other coreopsis types. Attracts butterflies and is a good nectar source for beneficial insects. Prefers full sun, tolerates poor soil and drought conditions. Naturalizes easily, but does not become weedy.

1/2 g = 200 seeds, $3.50
2 g, $6.50

Coreopsis, Tall Plains

Coreopsis tinctoria.

Tall Plains coreopsis is the true original of the coreopsis clan. The plants are loaded with bright yellow flowers that have dark maroon centers. Blooms reach 2” across, petals have nice jagged edges. Plants grow to 3’ with ferny foliage. A great low maintenance addition to the flower garden, with a sea of blooms. Flowers make excellent filler in bouquets, create superb pollinator habitat over a long season, and songbirds love them for cover and forage, too. Blooms right up until frost. Thrives in disturbed areas and wet soils but is also drought tolerant, naturalizes easily and is deer resistant. What more could you want? Native to the plains of the US and has naturalized throughout most of the country. Self-seeding annual. Aka, Calliopsis, Tickseed.

Packet = 200 seeds, $3.50
1/2 oz, $12.00
1 oz, $24.00

Coreopsis, Tiger Mix

Coreopsis tinctoria.

Most plants grow to 30” and produce daisy-like flowers with red centers and vibrant yellow edges. There is some slight variation in bloom types, including all red variation in bloom types, including all red
a tea of the dried plant has been used to make a coffee substitute. Blooms earlier than many other flowering annuals. Deadhead to prolong blooming. Tiger Mix coreopsis is a selection of Tall Plains coreopsis, a North American native plant. Will self-seed. Aka, Calliopsis, Tickseed. Packet ≈ 200 seeds, $3.50
1/4 oz, $12.00
1/2 g ≈ 1,000 seeds, $6.25

Cosmos, Buddha’s Hand

Cosmos sulphureus.

...Mostly semi-double, fiery orange blooms on 3-4’ tall plants that flower early. A favorite of bumblebees. We have been growing this variety ever since our days as farm apprentices in 2004 and we hope to keep it around for the long haul. Originating from a mysterious single plant with a hand written tag from an unknown source. Possibly pulled out of a dwarf bright lights mix, but we will never know for sure. We love mystery and we love this flower.
1 g ≈ 80 seeds, $3.50
5 g, $6.50

Cosmos, Daydream

Cosmos bipinnatus.

...A tall, productive, and attractive cosmos covered with unique blooms. Plants grow 5-6’ tall. Daydream cosmos flowers have a nice rosy center surrounded by pale pink. The bulls-eye pattern must make nice targets for insects with infrared vision because they are very attractive to pollinators. Stealing a few from the bees is worthwhile for pleasant cut flower displays. Bouquets last indoors for more than a week if they are picked right into water just as the petals are opening. Andrew professes, “I now understand what a sunshine daydream is.”
1/2 g = 75 seeds, $3.50
1/2 oz, $15.00
5 g, $6.50
2 oz, $25.00

Cosmos, Rubenza

Cosmos bipinnatus.

...A dynamic flower that changes color as it matures, from a deep wine maroon to a muted rose, with many shades in between. Single flowers with yellow centers appear atop ferny foliage. Upright plants grow to about 3 ½’, making Rubenza shorter than most cosmos so they do not need staking.

Cosmos, Buddha’s Hand

Cosmos sulphureus.

...Mostly semi-double, fiery orange blooms on 3-4’ tall plants that flower early. A favorite of bumblebees. We have been growing this variety ever since our days as farm apprentices in 2004 and we hope to keep it around for the long haul. Originating from a mysterious single plant with a hand written tag from an unknown source. Possibly pulled out of a dwarf bright lights mix, but we will never know for sure. We love mystery and we love this flower.
1 g ≈ 80 seeds, $3.50
5 g, $6.50

Cosmos, Daydream

Cosmos bipinnatus.

...A tall, productive, and attractive cosmos covered with unique blooms. Plants grow 5-6’ tall. Daydream cosmos flowers have a nice rosy center surrounded by pale pink. The bulls-eye pattern must make nice targets for insects with infrared vision because they are very attractive to pollinators. Stealing a few from the bees is worthwhile for pleasant cut flower displays. Bouquets last indoors for more than a week if they are picked right into water just as the petals are opening. Andrew professes, “I now understand what a sunshine daydream is.”
1/2 g = 75 seeds, $3.50
1/2 oz, $15.00
5 g, $6.50
2 oz, $25.00

Cosmos, Rubenza

Cosmos bipinnatus.

...A dynamic flower that changes color as it matures, from a deep wine maroon to a muted rose, with many shades in between. Single flowers with yellow centers appear atop ferny foliage. Upright plants grow to about 3 ½’, making Rubenza shorter than most cosmos so they do not need staking.

Lavender, English Tall
Lavandula angustifolia. Perennial in zones 5-10.
NEW for 2020! With its divine smell and color, lavender deserves a spot in every garden. English Tall Lavender is the traditional type with long stems and dark purple flowers. Tiny, purple, highly fragrant flowers form on small spikes. Silvery grey foliage. It has been used for centuries as a medicinal herb, and is now widely used in aromatherapy to promote relaxation. Crafty uses for the little purple flower wands are endless. It is essential in potpourri or can be sown into sachets by itself to perfume linens and repel pests. Also great in the kitchen (lavender lemonade, anyone?). Very easy to grow, lavender thrives on neglect, is hardy to zone 5, and prefers good drainage.
Packet ≈ 110 seeds, $3.80

Monarda, Wild Bergamot / Bee Balm
Monarda fistulosa. Perennial in zones 3-10.
NEW for 2020! The name Bee Balm says it all. Bees, butterflies, other beneficial insects, even hummingbirds love to come and drink the nectar of this member of the mint family. We saw a large number of native bumble bees foraging among the summer blooms. Steal a few flowering stems from the bee for a mellow hued pink cut flower, or use the edible, tubular flowers as an addition to salads or sprinkled on top of any dish as a light minty garnish. Blooms the second year after sowing. Grows 3-4' tall. Wild Bergamot leaves and flowers have some nice medicinal uses and make a nice tea. A native wildflower found throughout most of North America, although not common on the West Coast. Said to grow best in dry alkaline soil, but we have found it likes our moderately acidic Oregon clay-loam just fine.
Packet ≈ 110 seeds, $3.80
Large Packet ≈ 110 seeds, $6.80

Nigella, Love-in-a-Mist
Nigella damascena. 65-75 days.
A fun and low-maintenance addition to the annual flower garden. Light blue or white, 1 ½" flowers are held within a framework of lacy leaves. As they dry down they transform into bulbous seed heads reminiscent of balloons. Blossoms are a good cut flower when fresh and seed heads make an even better, unique everlasting. Be sure to plant them where you’ll be happy to see them year after year, as they will self seed readily if left unharvested. Can be grown in full sun to part shade, with shade-grown plants reaching 3' tall. This cool annual can be sown in fall for early blooms in spring, or spring sow for summer blooms. Bloom time is short – succession sowing is recommended for continuous harvest. Related to, but not the same as Black-Seeded Culinary Nigella which is used as a culinary herb. Possibly the best collection of common names for any one flower: Aka, Ragged Lady, Devil in the Bush, Love Entangle, Jack-in-Prison.
1/2 g ≈ 175 seeds, $3.50
2 g, $6.50
1 oz, $25.00

Nigella, Exotic Love-in-a-Mist
Nigella hispanica. 70-80 days.
Purple-blue flowers are 2 ½" wide with a captivating cluster of extruded dark purple stamens and pistils at the center. Pollinator friendly blooms attract almost as many insect visitors as California poppies. Long, 16" stems make great fresh cut flowers with blooms lasting just over one week – a little longer than other nigella. Seed pods are also captivating and look amazing in everlasting flower arrangements. Exotic Love-in-a-Mist is an easy to grow, direct sown annual, happy in partial shade to full sun. Native to Spain. We would like to thank Fedco Seeds for turning us on to this variety. Related to, but not the same as Black-Seeded Culinary Nigella which is used as a culinary herb. Aka, Spanish Fennel Flower.
1/2 g ≈ 175 seeds, $3.50
2 g, $6.50
1 oz, $25.00

Mexican Sunflowers
Tagetes tenuifolia. 60-65 days.
NEW for 2020! Tiny, orange, edible, marigold flowers form on dwarf plants that do well in containers. A cheerful little bedding plant, looks great when planted densely. Blooms all summer long right up until frost, and is highly attractive to pollinators and other beneficial insects. Lovely citrusy scent is fun to experiment with in the kitchen, although flavor is on the spicy side, or simply use leaves or petals as a garnish. Signet type.
Packet ≈ 60 seeds, $3.80

Nigella, Love-in-a-Mist
Nigella damascena. 65-75 days.
A fun and low-maintenance addition to the annual flower garden. Light blue or white, 1 ½" flowers are held within a framework of lacy leaves. 1 oz, $25.00

Painted Tongue, Kew Blue
Salpiglossis sinuata. 75 days.
Cascading, velvety dark purple trumpet-shaped flowers that bloom continuously up slender-stemmed sprays that reach 3½' tall. These delicate flowers are not suitable for bouquets, but are a showstopper in the garden and very attractive to pollinators. Plants may need staking to prevent lodging, but we didn’t have this problem. Sow this annual in early spring for flowers from June through September.
Packet ≈ 450 seeds, $3.50
2 g, $12.50
1/2 oz, $25.00

Poppy, Horton Corn Poppy Mix
Papaver rhoeas.
Back for 2020! Compact plants with lots of frilly bright-purple poppies. Degree of frills seems to be related to growing conditions as plants can form both super-frill and not-so-frill flowers. The unique frilliness provides a fairly open flower that bees and other beneficial insects love to visit. Collected by The Seed Ambassadors Project at the Seedy Sunday Seed Swap in Brighton, England.
1/2 g ≈ 500 seeds, $3.50
2 g, $6.00
1 oz, $24.00

Poppy, Purple Frilly English
Papaver somniferum.
Back for 2020! Compact plants with lots of frilly bright-purple poppies. The unique frilliness provides a fairly open flower that bees and other beneficial insects love to visit. Collected by The Seed Ambassadors Project at the Seedy Sunday Seed Swap in Brighton, England.

2 g, $6.00
1 oz, $24.00

Rose Campion
Silene coronaria. Perennial in zones 4-9.
Traditionally a very popular, easy to grow flower. Small, magenta blossoms held atop 2-3' tall, downy silver plants. We find it tolerates neglect better than most plants and will come back perennially for many years. Drought hardy and self seeding – once you get enough going it will naturalize nicely. Tolerates partial shade and can flower in the first year if sown early.
1/2 g ≈ 500 seeds, $3.50
8 g, $12.00
2 g, $6.00
1 oz, $20.00

www.adaprive seeds.com
Rudbeckia, Autumn Forest

*Rudbeckia hirta.* 60-80 days.

High quality selection of a North American native wildflower. 4-5" wide flowers are bicolor with yellow tipped petals and dark orange-red centers. Blooms profusely beginning in July / August and continues until frost. Excellent cut flower with easy to cut long stems. Big, 2' tall bushes fill out well and make great accent and / or border plantings. We grow it as an annual, but Autumn Forest Rudbeckia may be a perennial in zone 9b or warmer. Transplant into a sunny, well-drained location. Aka, Gloriosa Daisy.

Packet = 165 seeds, $3.50

1/2 g = 660 seeds, $6.50

Rudbeckia, Prairie Glow

*Rudbeckia triloba.* Perennial in zones 4-8.

**NEW for 2020!** A tall coneflower / brown eyed Susan with a wild character. Prairie Glow’s small, 2" red flowers with yellow tips perform well as a cut flower both fresh and dried. Bushy plants reach 4' tall and produce many stems with a purple tint. Feeds birds, bees, and butterflies, but not the deer. This species is native to the prairie states of the US. Self-sows.

Packet = 125 seeds, $3.50

1/2 g = 625 seeds, $6.50

Rudbeckia, Rustic Colors

*Rudbeckia hirta.* 60-80 days. Perennial in zones 7-8.

Rudbeckia is usually referred to as Black-eyed Susan, but Rustic Colors is not your average Black-eyed Susan. Blooms profusely from spring through autumn with 4" daisy-like flowers that range in color from yellow to orange, red and mahogany. Long stems contribute to its strength as a cut flower; blooms hold for a long time in a vase. The diversity within this variety is as eye-catching in bouquets as it is in the garden. Plants grow to 2' tall, do well in partial to full sun, and can tolerate both wet and dry soil conditions. A selection of a North American native species that can naturalize but is not invasive. Usually grown as an annual in colder climates.

Packet = 165 seeds, $3.50

1/2 g = 660 seeds, $6.50

Snapdragon, Black Prince

*Antirrhinum majus.* 60-70 days.

We’re big fans of dark flowers; deep dark purples and reds are always welcome in our gardens. The alluring, velvety crimson Black Prince snapdragon is a great addition to our collection. Gorgeous flowers bloom early and continually up stems that reach 2 ½ tall. Very attractive to bumblebees. Blooms early and keeps going late into the season, especially if deadheaded. Grows well in containers. May overwinter if you’re lucky, and just might self-seed. An old variety that dates from around 1915. Deer resistant. All parts of this plant are poisonous.

Packet = 250 seeds, $3.50

1 g = 4,500 seeds, $12.50

Large Packet = 1,000 seeds, $6.50

Snapdragon, Defiant Mix

*Antirrhinum majus.* 70-80 days.

Snapdragons are one of the classic annual flowers that every gardener should experiment with. These 3' tall plants are a bright accent in the garden and also make excellent cut flowers. Flower color mostly ranges from dark-cherry red to peach-orange red, deftly throwing out the occasional bright yellow plant. This mix will not settle for the authority of uniformity. We think of it as a beautiful mix of reds with the possibility of surprises. One of the coolest things about snapdragons is that the seed pods look like little upside-down skulls when seed is ripe. Blooms from July through September and is deer resistant. All parts of this plant are poisonous.

Packet = 250 seeds, $3.50

1 g = 4,500 seeds, $12.50

Large Packet = 1,000 seeds, $6.50

Snapdragon, Orange Wonder

*Antirrhinum majus.* 50-60 days.

**NEW for 2020!** A stunning example of that magical orange-peach flower color that appears to glow like an eye candy sunset. We love this quality of color wherever we can find it, and Orange Wonder snapdragon is so spectacular that everyone who saw it in our field stopped in their tracks to admire it. A great cut flower, stems will continue to bloom until frost. Unique variety that grows to 3' tall and benefits from support. Deer resistant. All parts of this plant are poisonous.

Packet = 250 seeds, $3.50

1 g = 4,500 seeds, $12.50

Large Packet = 1,000 seeds, $6.50

Strawflower, Monstrosum Mix

*Xerochrysum bracteatum.* 75-85 days.

Strawflowers are one of the best everlasting flowers. They are easy to grow, produce loads of blossoms sometimes even after frost, have strong stems, and are tolerant of low fertility and dry growing conditions. Monstrosum Mix is a lovely rainbow of colors including white, orange, yellow, and several shades of pinks and reds, but our favorites are the orange-yel low ones that are almost like looking into a flame. For best dried flower results, harvest before the double, 2" blooms are fully opened. Carri Heisler of Pitchfork & Crow, who introduced us to this variety, says, “I love them … and smile every time I see them.” So do we, and we think you will too! Aka, Helichrysum.

Packet = 200 seeds, $3.50

5 g = $18.00

1 g = 1,000 seeds, $6.50

Strawflower, Scarlet

*Xerochrysum bracteatum.* 80 days.

Lovely red with a touch of gold, these everlasting flowers are great for bouquets, wreaths, garlands, and many other creative uses. We have even been known to use them as festive packing peanuts for gifts! Blossoms grow to 2" across and occasionally form in clusters, blooming right up until frost or even later. Plants grow to 5' tall and 3' wide. For best results as an everlasting, be sure to pick before flowers have fully opened, dry well, and store in a dry, low-humidity place. May self sow. Aka, Helichrysum.

Packet = 200 seeds, $3.50

5 g = $18.00

1 g = 1,000 seeds, $6.50

Sunflower, Hungarian Black Seeded

*Helianthus annuus.*

5-7' tall plants produce mostly single, 8-12" flowers with yellow petals. Large, black seeds are tasty as a snack and also good for fresh sprouts since they’re huge. Black seeded sunflower seeds are a popular protein-rich food in eastern Europe, and are very popular with the birds here at our farm. May also be pressed for oil if you can grow enough. This variety was collected on our first Seed Ambassadors trip from Martin Ringhofer, who grows this Hungarian heirloom on his farm in Hungary. Seed produced by Avoca in Corvallis, Oregon.

1/2 g = 30 seeds, $3.50

2 oz = $20.00

1 oz = $6.25

1/4 lb = $35.00

Sunflower, Ring of Fire

*Helianthus annuus.* 70 days.

Bicolored petals are yellow at the tips and dark maroon at the centers. Plants grow to about 5' tall with lots of branching. The primary flower is 6-8" and plants continue to set many smaller, 3-5" flowers on long stems through the end of the season, which makes this variety superb for arrangements. Ring of Fire is an All-America Selections winner.

1 g = 35 seeds, $3.50

1/2 oz = $15.00

3 g = $6.25

2 oz = $45.00

Sunflower, The Tower

*Helianthus annuus.*

Flowers reach 6" wide on well-branched, 6' tall plants. Flower color varies and includes pale yellow, bright yellow, bicolor, and red flowers. A very good cut flower since each plant produces several flower heads and stem size works well in bouquets. We were given this seed by Wim Brus, a biodynamic seed grower high in the Apennine Mountains in Italy. He named this variety for his home, a 15th century stone tower near his hillside farm. Aka, II Tore. Seed produced by Moondog’s Farm in Mabel, Oregon.

1 g = 35 seeds, $3.50

1/2 oz = $15.00

3 g = $6.25

2 oz = $45.00
Sunflower, The Sarah & Sarah Mix

*Helianthus annuus.*

**Adaptive Seeds Original.** A sunflower party, this collection is an evolving mixture of sunflower colors and growth habits that we have been curating since 2005. Selected over the years from various crosses and volunteers. Many are classic yellows as well as unique reds and a few lemon yellow types. But the real gems in the mix are long petalled bicolor yellow and red types that stop us in our tracks when we find them. Most are good cut flowers, but some plants grow to 12’ or more making harvest fun, albeit inefficient. This mix is our choice for naturalizing as they are particularly good at volunteering year after year.

**Sweet William, Holborn Glory**

*Dianthus barbatus.* Biennial / Perennial in zones 3-9.

Dark pink and white, candy striped flowers. Small, 1” wide, single blooms appear in saucer-sized clusters atop 2’ tall, sturdy stems. The flowers bloom over a long season without deadheading and are highly desired by butterflies and bumblebees. If the plants are cut back low to the ground mid-season, they may produce a second flush of flowers. Makes a good, long-lasting cut flower. This classic variety dates back to the 1920s. Deer resistant. Hardy biennial or short-lived perennial.

**Sweet William, Hollandia Mix**

*Dianthus barbatus.* 45 days.

**NEW for 2020!** This Dianthus / Sweet William is an annual cut flower version of the cottage garden favorite. So many Sweet Williams are biennial and it is difficult to wait for the blooms. The 2’ tall plants of Hollandia Mix display many of the classic Dianthus colors – red, purple, white, pink and bicolor combinations abound. Blooms stand tall on strong stems and have a sweet smell. A favorite for their long vase life. Petals are edible and make a nice addition to salads.

**Sweet Pea, Blue Celeste**

*Lathyrus odoratus.* 60 days.

**NEW for 2020!** Our Blue Celeste Sweet Pea patch quickly became my favorite spot in the field this summer. Loads of sky blue flowers with a faint purple hue are almost luminescent, and the classic sweet pea scent seemed to call out and remind me to take a few minutes to enjoy a moment here and there. Plants grow to 4’ tall and stems are nice and long for cut flowers. Earlier than most other sweet peas and continues to bloom even after summer heats up. By far the best sweet pea of our trials this season, and the only one to make the catalog.

**Sweet Pea, Wiltshire Ripple**

*Lathyrus odoratus.* 70-80 days.

With red to maroon streaks and specks on white background petals, this variety is a striking change from classic pastel bicolor sweet peas. Modern sweet peas often lack the sweet scent that gives the species its name in the first place, however, Wiltshire Ripple is fully and joyously fragrant. Grows easily with an early spring sowing and begins to flower in May or June. Days to flower is partly influenced by day length and sowing date.

**Tobacco, Jasmine Scented**

*Nicotiana alata.* 70 days.

Bright white trumpet-shaped flowers bloom in the evening and practically glow at night—simply stunning in the full moon! But more significant is the amazing jasmine smell that is particularly strong at dusk as it begins to attract large moths for pollination. The scent is so strong you can smell it from 30’ away and would be great planted near your porch, under the bathroom window, or anywhere you want to enjoy the sweet perfume. It’s amazing to me that we gardened for over 10 years before we first experienced this flower. Really, it should be in every garden. Suitable for containers. Flowers are much larger than most tobacco flowers. Sticky resin and nighttime blooming make this not a good candidate for cutting or bouquets. Annual that self-seeds easily.

**Tobacco, Purple Perfume Nicotiana**

*Nicotiana x sandareae.* 60 days.

Dark, deep purple, trumpet-shaped flowers with all of the intoxicating fragrance of taller nicotianas. Shorter, 2’ tall plants are perfect when creatively placed as accents in the garden, or in containers. The flowers are loved by twilight and nocturnal insects. We discovered this cute little plant at Nichols Garden Nursery in Albany, Oregon. Nichols is a gardening institution here in the Willamette Valley and they carry some cool, rare varieties. We are excited to offer Purple Perfume nicotiana seed organically. Open pollinated selection made from the hybrid Deep Purple, an All-American Selections winner.

**Winged Everlasting**

*Ammobium alatum.* 60 days. Perennial in zones 9-10.

**NEW for 2020!** Perhaps one of the best and most well known dried flowers, Winged Everlasting (aka, Ammobium), is also a good filler in fresh arrangements. Tiny white strawflower like blossoms sit atop sturdy stems, and can be cut before they fully open for all white flowers, or after they open and yellow centers appear. An abundance of stems that average 6-12 flowers make these small plants very high yielding. Native to Australia and in the seed trade since at least the 1880s.

**Yarrow, Parker’s Gold**

*Achillea filipendulina.* Perennial in zones 3-10.

A striking ornamental. Gold flowers make excellent cut flowers and are even better dried as everlasting. The upright growth makes for easy cutting and the flowers last all summer. What we love most about Parker’s Gold is the captivating aromatic leaves that look like ferns but smell like the desert. It is one of our favorite smells from the plant world. Plants grow to 4’ tall and are easy to care for, needing little fertility or water once established. Prefer a location with full sun and good drainage. Impressively cold hardy down to about -40°F. Plants bloom in their second year, sometimes in their first if planted very early in the season. The species is known as fernleaf yarrow and is native to central Asia. Aka, Parker’s Variety.

**Zinnia, Berry Basket**

*Zinnia elegans.*

A gorgeous mix of berry-toned zinnias, including raspberry, strawberry (and strawberry ice cream), marionberry, and grape (concorde, merlot, and rosé). Perhaps we can pretend that grapes are berries, and that rosé is a grape variety just this once. If you like a full spectrum of pink, this is the mix for you. A great cut flower, with long, strong stems that will last in a bouquet for 7–10 days. Flowers are fully double. Plants reach 3–4’ and will bloom from July through frost, especially if picked regularly.

1/2 g = 50 seeds, $3.50
2 g = $6.25
8 g = $12.00

**Zinnia, Oriole**

*Zinnia elegans.*

Lovely bright orange blossoms that are so brilliantly colored they almost seem incandescent. Long, sturdy stems are great for cutting. Blooms right up until frost for good late season color, and provides excellent habitat and food for pollinators and songbirds. Deadhead to promote flowering. Deer resistant, tender annual. Classic variety from the 1920s.

1/2 g = 50 seeds, $3.50
2 g = $6.25
8 g = $12.00

**Zinnia, El Dorado**

*Zinnia elegans.*

Softly romantic shades of coral-peachy goodness. Double blossoms last for days and seem to glow in the orange light of sunset. A lovely cut flower reminiscent of dahlias. Sturdy, hardy plants thrive even under adverse conditions in our field. Deer resistant. Zinnias are tender annuals that will bloom until frost.

1/2 g = 50 seeds, $3.50
2 g = $6.25
8 g = $12.00
1 oz = $32.00

**Zinnia, Fireball**

*Zinnia elegans.*

Vibrant shades of oranges and reds, with the very occasional dark pink. Tall plants produce over a long season. Bloom types range from single to fully double, some looking like lions’ manes. Very attractive to pollinators, providing good habitat for them as well. Long, strong stems make a good cut flower. Deer resistant. Zinnias are tender annuals that will bloom until frost.

1/2 g = 50 seeds, $3.50
2 g = $6.25
8 g = $12.00
1 oz = $32.00

**Zinnia, Super Yoga Red**

*Zinnia elegans.*

Single color flowers with slight variation in shades of dark red. The color reminds us of a classic red rose; thankfully zinnias are much easier to grow! We were tempted to rename this variety something like “Red Wine Shades” or “Yoga and Wine” because of the slightly different varietals of reds it can produce. Flowers may be semi-double or fully double; both look great in bouquets. Large plants with long stems continue to bloom through first frost and beneficial insects love them for a late-season buffet. Does best with direct seeded, but can be transplanted as well. Deer resistant, tender annual.

1/2 g = 50 seeds, $3.50
2 g = $6.25
8 g = $12.00
1 oz = $32.00
1/4 lb = $60.00

**Barley, Lawina Hulless**

*Hordeum vulgare.*

Short plants produce 2-rowed heads of tasty, hulless barley that thresh easily yet don’t shatter. Hulless barley is a good bioregionally appropriate substitute for rice, as it produces well, is easy to process, and cooks up into a wholesome, delicious whole grain. Lawina Hulless is our golden barley variety of choice both in the kitchen and the field. Performs well when spring sown. We obtained this variety from the breeder, Karl-Josef Müller, on our first Seed Ambassadors trip to Germany. Seed produced by Myrtle Creek Farm in Myrtle Creek, Oregon.

1 oz = 650 seeds, $3.50
4 oz = $5.50
5 lbs = $35.00

**Barley, Purple Valley**

*Hordeum vulgare.*

Great in soups, whole grain salads, or try as a substitute for arborio rice in risotto. Purple Valley barley is hulless, meaning that the hull falls off naturally during harvest resulting in edible, whole grain barley. We recommend lightly toasting barley in a dry pan until it begins to pop or smell like toast. Then cook just like brown rice. You end up with a fairly firm texture with a delightful rich nutty flavor. This variety is 6 row, and is less prone to lodging than Tibetan and other purple hulless barleys, which it may have been selected from. Best sown in spring. After many years of selection here in the Willamette Valley, this variety was evaluated by Pat Hayes, barley breeder at Oregon State University. He suggested changing the name to Purple Valley to differentiate it from Purple Prairie and other purple barley varieties. Aka, Purple Hulless Improved. Seed produced by Lonesome Whistle Farm in Junction City, Oregon.

1 oz = 700 seeds, $3.50
4 oz = $5.50
5 lbs = $35.00

**Emmer**

*Triticum dicoccum.*

A delicious and nutritious grain, this awned wheat relative has a tightly wrapped hull that is difficult to remove, needing specialized equipment (or maybe just a blender). The hulls make it especially good for brewing beer, and it is also great animal feed. For some techniques on dehulling emmer and other ancient grains, check out this webinar: extension.org/pages/71272/dehulling-ancient-grains-webinar#.VHeD8Yf8W2w. We encourage experimentation and would love to hear

---

**Did you know that we grow just about everything in this catalog ourselves? And if we didn’t grow it, we say who did right in the variety description. See our full list of small grower collaborators on page 10. Farmer Direct!**
about your results! Aka, Farro. Seed produced by Lonesome Whistle Farm in Junction City, Oregon.
1 oz = 700 seeds, $3.50
1 lb, $12.50
1/2 lb, $8.50
5 lbs, $48.50

Flax, Foster
Linum usitatissimum. 100 days.
Pretty, dark blue flowers are followed by beautiful, golden-yellow seeds with very high oil content. A little late to mature, but higher oil content is worth the wait. Golden flax has a delicious flavor that is milder than brown flax types. Foster flax is named for Foster County, North Dakota. It was released in 1969 by North Dakota State University, and developed for high yields and resistance to all North American flax rust races.
2 g = 500 seeds, $3.50
1/2 oz, $12.50
1 oz, $24.00
1/2 lb, $32.00

Flax, Sussex
Linum usitatissimum.
A fairly tall flax at about 3' that is good for fiber production. The brown seeds are noteworthy for their high alpha-linolenic acid (an Omega-3 fatty acid) content, as tested by the Irish Seed Savers Association. Eighteen varieties were tested with polysaturated fat percentages between 28-75%, and Sussex had the highest. Many Western diets are deficient in Omega-3 and excessive in Omega-6. Balancing this ratio could offer many health benefits including battling depression and mood disorders. A heritage English flax/linseed from Sussex that came to us via The Irish Seed Savers Association.
2 g = 500 seeds, $3.50
1/2 oz, $6.50
1/2 lb, $12.00

Millet, Aukšės
Setaria italica. Foxtail millet.
Foxtail millet is the type used for bird food. Small seeds have yellow hulls that must be removed before humans can eat it (not an easy task). Very easy to grow, but difficult to save seed from unless you have zero birds in your garden (but who would want that?). Try using it as a cut flower, feeding it to chickens and ducks, or fermenting it into beer. Given to The Seed Ambassadors Project by The Lithuanian Ministry of Agriculture in Dotnuva, Lithuania.
4 g = 1,200 seeds, $3.50
12 g, $6.50
2 oz, $12.00

Millet, Hells Canyon
Setaria italica. Foxtail millet.
This is an awesome foxtail millet. Beautiful, dense, fingerly heads are a reddish brown, leaves and stalks are purplish-green. Tolerates cooler summers. Very productive, easy to hand harvest (if you can get to it before the birds) and grows in flower arrangements. Plants grow to 6’ tall. From Don Kluver who gardens in Hells Canyon off the Snake River, via a Seed Saver’s Exchange member in Idaho.
4 g = 1,200 seeds, $3.50
12 g, $6.50
2 oz, $12.00

Millet, Rudukės
Setaria italica. Foxtail millet.
Easy to grow, small seeded variety with red-orange hulls. As with our other millet varieties, it is also great for feeding to your chickens and ducks and fermenting into beer for personal use. Remove hull before you eat it. Drought resistant. Rudukės millet was given to us by the Lithuanian Ministry of Agriculture in Dotnuva, Lithuania.
4 g = 1,200 seeds, $3.50
12 g, $6.50
2 oz, $12.00
1/2 lb, $24.00

Millet, Dragon’s Claw
Echinochloa crus-galli. 90 days.
NEW for 2020! Aply named, Dragon’s Claw is a unique and fun millet with panicles that are shaped like a hand with up to eight fingers pointed up to the sky. Would make a neat addition to autumn bouquets. The birds in our field left this one alone, preferring pretty much every other crop, which is surprising because the seed smells delicious like malted barley. Since it is a new crop for us here, maybe the birds haven’t figured it out yet. Short for a millet, plants grow to 18”. Originated as a food crop in the Ethiopian and Ugandan highlands, although now grown all over the world. Finger Millet is especially valued in dry hot climates where it is ground into flour and made into cakes, porridge and fermented into beer. As with all millets, it is difficult to hull so is most often milled into flower. Aka, Ragi, African Finger Millet.
1 g = 500 seeds, $3.50
1/2 oz, $6.00
2 oz, $12.00
1/2 lb, $24.00

Millet, Juosvės
Setaria italica. Foxtail millet.
Easy to grow, small seeded variety with red-orange hulls. As with our other millet varieties, it is also great for feeding to your chickens and ducks and fermenting into beer for personal use. Remove hull before you eat it. Drought resistant. Rudukės millet was given to us by the Lithuanian Ministry of Agriculture in Dotnuva, Lithuania.
4 g = 1,200 seeds, $3.50
12 g, $6.50
2 oz, $12.00
1/2 lb, $24.00

Oats, Föckinghauser
Avena sativa.
An early maturing, fairly short and lodge resistant white oat with hulls. Used as an animal feed and for hay, or as a winter-kill cover crop in cold climates. Grows well mixed with spring barley and fed in combination for sheep, goats, horses, cows, chickens, ducks, geese, and rabbits. Bred by Wolfgang Kreimer of Mühlenbachhof, Germany, from the old oat variety, Alfred. We collected it in 2007 when visiting Ulla Grall and her seed company Bio-Saatgut in Germany.
1/2 oz = 500 seeds, $3.50
4 oz, $8.00
1/2 lb, $12.00
1 lb, $18.00

1 lb, $18.00

Poppy, Elka White
Papaver somniferum.
White breadseed type. Easy to grow, pale pink-white flowers with purple smudges in the center. Produces massive quantities of sweet, nutty flavored seeds that make an excellent paste/meal when ground into nut butter. Giant seed pods (1½” x 2”) are sealed and do not shatter. A great choice for garden scale, non-cereal grain production. Originally from Chrenovec-Brusno, Slovakia.
1/2 g = 500 seeds, $3.50
1/4 oz, $12.00
2 g, $6.00
1 oz, $24.00

Poppy, Hungarian Blue Breadseed
Papaver somniferum.
Blue breadseed type. The light blue seeds of this variety have a delicious nutty flavor. With stunning dark purple petals, Hungarian Blue Breadseed poppy also makes a beautiful ornamental, especially when a patch or field is flowering all together. This Hungarian heritage variety is super easy to grow, and a highly nutritious staple food. We are not the only ones who find the flowers captivating – bees, especially bumble bees, go nuts over them. The pods do not shatter like most poppies, making it very easy to hand harvest seeds. Dried pods are also very nice in floral arrangements. Seed produced by Twisp River Seed in Twisp, Washington.
1/2 g = 500 seeds, $3.50
1/4 oz, $12.00
2 g, $6.00
1 oz, $24.00

Quinoa, Apelleva
Chenopodium quinoa.
The earliest maturing quinoa we have ever grown, or heard of for that matter. Even with such early ripening, Apelleva produces great yields of large, mostly white seeds. We might be biased because it is our most recent amazing quinoa find, but we really were impressed! Slightly variable, mostly cream-gold and green plants with the occasional pink to red-toned standout. Plants grow 4-6’ tall. Our planting stock came from Bountiful Gardens in Willits, California, just prior to their closing. We have received so
many good varieties from them over the years were saddened to see them go. Luckily, the seed lives on.

1/2 g = 250 seeds, $3.50
2 g, $6.50
1 oz, $18.50

**Quinoa, Chadmo**

*Chenopodium quinoa.* 105-115 days.

- Cream-brown seed. This variety was shared with our friend, Dan Armstrong, at the 2013 International Quinoa Symposium at Washington State University, who passed it onto us the following year. Out of the 7 varieties Dan trialed, Chadmo stood out for both vigor and yield. Originally from the island of Chiloé off the coast of Chile, Chadmo seems more well-adapted to growing at low elevations than most other varieties of quinoa which hail from high in the Andes. In trials through the University of Buenos Aires, Chadmo showed strong resistance to pre-harvest sprouting (seed dormancy in seed head), most likely an adaptation to being from a humid, temperate climate. Chiloé is also at a similar latitude (41°- 43°S) to Oregon as being one of the highest yielding in their trials. Some quinoa varieties need to be grown at higher elevation; Linares produces well even at sea level.

1/2 g = 250 seeds, $3.50
4 oz, $30.00
2 g, $6.50
1 lb, $85.00
1 oz, $18.50

**Quinoa, Linares**

*Chenopodium quinoa.* 100-110 days.

One of the best candidates for western Oregon quinoa production. There has been a lot of hype about quinoa production lately with few successes on a commercial scale. Not yet anyway! Getting the right seed is the first step. Plants are 4-5’ tall. Seed head color is slightly variable, from orange to gold when mature. Originating in Chile where the day length is similar to our own, Linares is highly regarded by Kevin Murphy, grain breeder at WSU Pullman, Washington, as being one of the highest yielding in their trials. Some quinoa varieties need to be grown at higher elevation; Linares produces high yielding compared to other quinoa grown in low elevations. Short season. Open seed heads shed late season damp weather. Collected in southern Chile and named after quinoa collector and advocate David Cusack, who was murdered in Bolivia in 1984. There is anecdotal evidence that he was murdered by “business interests” that felt threatened by the solidarity amongst quinoa-growing campesinos. Others believe he was murdered due to his activism and research surrounding the CIA’s role in the overthrow of Chilean president Salvador Allende. All very mysterious.

1/2 g = 250 seeds, $3.50
4 oz, $30.00
2 g, $6.50
1 lb, $85.00
1 oz, $18.50

**Quinoa, Taiwanese**

*Chenopodium formosanum.* 120-130 days.

Easy to grow plants are similar to lambsquarters, with a unique pink coloration. Very heat tolerant. The magic happens when they grow over 6’ tall, producing beautiful long trailing flower heads. Flower heads resemble Love Lies Bleeding amaranth and similarly make great cut flowers. Late to mature seed but the plants can be cut and brought under cover to after-ripen. C. formosanum produces smaller seeds than Andean quinoa. We put threshed, uncleaned seed in a pillowcase, throw it in the clothes dryer, set to fluff (no heat), and let it tumble for 20 minutes – a great way to remove the hulls so it’s ready to cook. We mostly use the leaves as a vegetable, but the seed is also high in protein, making Taiwanese quinoa a great all purpose food plant. Said to be a native plant to Taiwan and China, it is very rare in North America. Recently added to the Slow Food Ark of Taste as an endangered food plant. We were gifted a sample of this seed originally by the lovely folks at Bountiful Gardens. Formerly known as the species *Chenopodium purpurascens*, may be considered *Chenopodium giganteum* by some botanists. Aka, Djulis, Purple Goosefoot, Giant Tree Spinach.

Packet = 250 seeds, $3.50
1/2 oz, $12.50
2 g = 1,500 seeds, $6.50

**Sorghum, Ba Ye Qi**

*Sorghum bicolor.* 90 days.

By far the earliest maturing grain sorghum we’ve grown. 7’ tall plants have one goal in mind and that is to make grain. Sugar content of the stalks and quantity of forage is not huge, which helps it mature grain so early. Sorghum flour is delicious and makes excellent gluten-free baked goods. Whole kernels can be cooked like brown rice and used just like rice, quinoa, couscous, or traditional sorghum porridge. In China, sorghum is also used to make beer and liquor. Plants thrive in sub-optimal growing conditions. Ba Ye Qi sorghum is from the Nei Mongol autonomous region of northern China. Our seed stock came to us from Sherck Seeds in Indiana, a seed company working to preserve unique staple food crop genetics. Aka, Ba Yi Qi.

5 g = 160 seeds, $3.50
1 oz, $10.00
1/2 oz, $6.50
1/4 lb, $24.00

**Sorghum, Kassaby**

*Sorghum bicolor.* 110 days.

White seeded grain sorghum with beautiful, dense seed heads. Plants grow to 12’ tall. Although Kassaby is a grain type, the stalks are wonderful to chew on and almost sweet enough to pass as sugarcane. Sorghum does not always mature seed at our latitude, but with an early sowing, Kassaby will make it. Sorghum is one of the world’s most important food crops, however it is under appreciated in North America. We like the biscuit flavor of sorghum flour, using it in recipes such as cookies, flat breads, and porridge. We received our seed stock from Nate Klineman of the Experimental Farm Network in New Jersey. He trialed many sorghum varieties from the USDA GRIN gene bank and found Kassaby to be one of the best for ease of growing and yielding viable seed. Originally from South Sudan.

5 g = 180 seeds, $3.50
1 oz, $10.00
1/2 oz, $6.50
1/4 lb, $24.00

**Sorghum, M61 Perennial**

*Sorghum bicolor.* 110 days.

NEW for 2020! We received this beautiful grain seed from our friend Tim Peters back in 2005 when we drove around the back roads of Douglas County, Oregon collecting samples from his quinoa perennial grain breeding projects. We saw many perennialized clumps growing back year after year and were intrigued. Although we have succeeded growing M61 Perennial as an annual, we have struggled to produce it as a true perennial. However, we know it is possible under the right conditions, because our friend Nate Kleinman of the Experimental Farm Network has successfully grown this variety as a perennial in New Jersey. M61 Perennial Sorghum is believed to have been selected from an interspecific hybrid between *Sorghum bicolor* and *Sorghum halepense.* Some plants have plump light-orange, easy to thresh grain, while others have a more tightly clasping glume and may be optimally used for cover crop and/or compost biomass production. Sorghum originated in Africa and typically has been produced as an annual. As a grain it is one of the most important food crops on the planet. We are very grateful to be able to pass this experimental grain with permaculture potential on to others. Please let us know how it grows for you.

5 g = 100 seeds, $3.50
1 oz, $10.00
1/2 oz, $6.50
1/4 lb, $24.00

**Sorghum, Taiwanese**

*Sorghum bicolor.* 100-100 days.

Our favorite quinoa because of its unique history and excellent performance here in the Willamette Valley. Golden orange seeds. 4-5’ tall plants with seed heads that turn vivid orange when ripe. High yielding compared to other quinoa grown in low elevations. Short season. Open seed heads shed late season damp weather. Collected in southern Chile and named after quinoa collector and advocate David Cusack, who was murdered in Bolivia in 1984. There is anecdotal evidence that he was murdered by "business interests" that felt threatened by the solidarity amongst quinoa-growing campesinos. Others believe he was murdered...
Teff, A.L. White

Enagrostis tef

An early maturing white seeded teff that consistently performs well in conditions varying from the short cool summer of 2010 to the long hot summer of 2015. White teff is usually too late maturing to be grown here, luckily A.L. White teff is different. Each plant produces many beautiful wispy tillers, like an ornamental grass, making teff an attractive choice for many reasons. White teff is also the preferred type for injera, a traditional soured flat bread important to Ethiopian cuisine.

1 oz ≈ 400 seeds, $3.50
1 lb, $8.00
1/2 lb, $5.50
5 lbs, $35.00

Wheat, Maris Widgeon

Moderately tall, winter type bread wheat that has a semi-hard, golden orange grain. Even though it lacks the high protein of modern reds, it is a great variety for making bread and we consider it to also be a good all-purpose flour. Very productive and tall enough to organically choke out the weeds. Awnless heads bend over and shed rain well. 3-4’ tall with low soil N. Can grow to 5’ in rich garden soil. Very good grain yield. Sarah and Jo have both been baking a 100% whole grain sourdough bread using Maris Widgeon weekly for several years now and find its flavor and texture exceptional when compared to other hard red varieties. For the past 30 years, its straw was used in England for traditional roof thatching, as it was the only legally available non-dwarf variety in the European Common Catalogue. Developed in 1964 by the Plant Breeding Institute of Cambridge, England. Seed produced by Lonesome Whistle Farm in Junction City, Oregon.

1 oz = 400 seeds, $3.50
1 lb, $8.00
1/2 lb, $5.50
5 lbs, $35.00

COVER CROP

GROWING & SEED SAVING BASICS

Most cover crops offered here are fall planted for soil protection through winter. Their incorporation in the spring adds organic matter and nitrogen to the soil. We mix many of these together and broadcast sow in August through October.

Crimson Clover

Trifolium incarnatum. An excellent winter or spring cover crop known primarily for its nitrogen fixing properties and high biomass production. Large, strikingly beautiful crimson flowers appear in the late spring and are great food for bees and other pollinators. In regions where the winter stays above 0°F, Crimson Clover is sown in the late summer and overwintered as a biennial. Can grow up to 3’ tall. Cover crops are a key way to build organic matter in your soil and protect from erosion. Perfect for summer under-sowing in crops like corn or squash that tend to stay in the field too late to get a traditional winter cover crop going. Hardy to zone 6. Seed produced by Praying Mantis Farm in Canby, Oregon.

2 oz ≈ 30,000 seeds, $3.80
1 lb, $16.00

Fava Beans

Listed under ‘Beans, Fava’ on page 20.

Oats

Listed under ‘Grains’ on page 141.

Rye

As of print, availability unknown. Please check website.

SEED MIXES

Seed Parties For The People!

All offerings listed here are pre-mixed for your sowing convenience.

Amaranth Alliance

Listed under ‘Amaranth’ on page 11.

Birdfood Bonanza

Grow a garden for your feathered friends! Mix contains millet, sunflowers, lettuce, cosmos, mustard, and others. We have at times joked that our efforts are for the birds. Quite literally in this case! Sow in spring for a progression of seeds your backyard birds will love. We have been known to grow catch crops of some of these plant types as a way to keep the birds from eating our actual seed crops.

2 g ≈ 500 seeds, $3.80
6 g, $6.80

Lettuce / Salad Mixes

Listed under ‘Specialty Greens’ on page 45.

Pollinator Party

Plant this mix at the edges of your garden to feed pollinators and invite beneficial insects of all kinds. Blooms start early with cilantro and dill and continue through frost. Several of these crops provide good bird food, too. Mix includes sunflowers, zinnias, tithonia, coreopsis, cilantro, fennel, parsley, dill, and others.

3 g ≈ 275 seeds, $3.80
9 g, $6.80

SEED COLLECTIONS

Children’s Garden Fun

Whether you’ve got your own kids or there’s a special little person in your life that loves to garden, this collection consists of easy-to-grow, safe, kid-approved plants. Hand the packets over and watch their wild garden grow! Two seasonal options of 7 packets available: Spring/Summer (carrot, chervil, curly endive, chives, rocket, sunflower), and Autumn/Winter (calendula, chard, beets, kale, lettuce mix, parsley, radish). Specific varieties included are subject to availability.

Spring/Summer,
7 packets, $25.00
Autumn/Winter,
7 packets, $27.00

Grow Your Own Grain

Growing staple foods is easier than you might think! Many crops can be done on a garden scale, and require no special equipment other than a few tarps and buckets. Collection includes one packet each of quinoa, flint corn, dent corn, hulless barley, flax, and amaranth. Specific varieties included are subject to availability.

6 packets, $21.00

Flower Lover

Who doesn’t love a flower garden? This collection is an assortment of 7 flowers that loves to garden, this collection consists of easy-to-grow, safe, kid-approved plants. Hand the packets over and watch their wild garden grow! Two seasonal options of 7 packets available: Spring/Summer (calendula, chard, beets, kale, lettuce mix, parsley, radish). Specific varieties included are subject to availability.

Spring/Summer,
7 packets, $24.50
Autumn/Winter,
7 packets, $24.50

Kimchi Garden

We’re big fans of kimchi and make a few batches every year. This collection offers all of the vegetable ingredients to make this delicious lacto-fermented staple side-dish. Nozaki Early napa cabbage, Okhura Winter Queen daikon radish, one of our Korean

Adaptive Seeds
type hot peppers, White Spear green onion, and carrots. Just add salt, ginger, garlic, and shrimp paste (if you’re up for it), and go! Yum!

5 packets, $18.70

**Salsa Celebration**

Salsa is the ultimate condiment, and a true celebration of the summer garden’s bounty. This collection includes all of the ingredients necessary for a tasty, homemade, homemade salsa (well, except salt and lime).

With both paste tomatoes and tomatillos, you can make salsa roja and verde! Collection includes: a paste tomato, tomatillo, hot pepper, cilantro, and onion. Specific varieties included are subject to availability.

5 packets, $18.10

**The Tomato Rainbow Connection**

Includes one each of a red, orange, yellow, green, pink, and purple/black tomato. Varieties will vary and may include slicer, paste, caladette, main season and/or cherry types. Here’s one way we’ll find it – the lovers, the dreamers, and us! Specific varieties included are subject to availability.

6 packets, $21.00

**Temperate Thai Garden**

Thai cuisine is considered to be one of the best in the world – and it’s certainly Sarah and Andrew’s favorite! Many of the ingredients used to create the complex flavors can be grown right here in the Pacific Northwest. We hope this collection inspires and elevates your Thai cooking experience. This collection includes Adaptive Thai hot pepper, Rak Tamachat cilantro, Thai Lemon basil, Egg From Phuket tomato, Noonq ta Klong Pea eggplant, and Chai Thai celery leaf.

6 packets, $22.00

**Wonderful Winter**

Ten packets of winter hardy and hearty garden vegetables, including root vegetables and leafy greens. May include but is not limited to the following – beets, chard, chicory, endive, green onion, kale, leeks, mustard, parsley, parsnip, radish, rutabaga, spinach, turnip. Specific varieties included are subject to availability.

10 packets, $36.50

---

**BOOKS**

**Around The World in 80 Plants: An Edible Perennial Vegetable Adventure For Temperate Climates**

By Stephen Barstow. 1st ed. 2014. 304 pages. $30.95

This book is such a gem. In *Around the World in 80 Plants*, Barstow shows us how many (80!) perennial vegetables can be easily integrated into our gardens and diets. The book includes terrific photos and horticultural information as well as cultural and culinary notes about each of the plants profiled. The write-ups are fantastic and are written in a very engaging style that will make you want to grow and eat most – if not all – of what is described. Many of the selections are ornamental as well as edible (“edimentals”), making it as great a reference for edible landscapes and teaching gardens as it is for permaculture homesteads.

Andrew says, "This is the single most interesting book I've read in five years." Plant nerds will love this book, and people that are not yet plant nerds may just become one after leafing through these pages.

**Blackberries in July: A Forager’s Field Guide to Inner Peace**

By Tom A. Titus. 1st ed. 2012. 147 pages. Autographed. $12.00

We are not in the business of selling books for pleasure reading, but *Blackberries in July* is such a great read that we couldn’t resist adding it to the short list of our book offerings because Sarah loves this book. Full of engaging imagery and rich prose, this book is so thoroughly enjoyable you will want to read it out loud so the people around you can share in the delight. Traveling through the seasons in the pages of this book is a celebration of living in a connected way with the bounty of the Pacific Northwest. This book is a must-read for anyone who finds their home in the Cascadia region, or anyone who wants to know what it’s like for those of us lucky enough to call this place home.

**Breed Your Own Vegetable Varieties: The Gardener’s and Farmer’s Guide to Plant Breeding and Seed Saving**

By Carol Deppe. 2nd edition. 2000. 348 pages. $25.00

Possibly the most important and entertaining garden book currently in print. Reading this book will empower your seed stewardship abilities and catapult you further into a world of plant fun.

**Farming While Black: Soul Fire Farm’s Practical Guide to Liberation on the Land**

By Leah Penniman. 2018. 368 pages. $34.95

**NEW for 2020!** In 1920, 14 percent of all land-owning US farmers were black. Today less than 2 percent of farms are controlled by black people—a loss of over 14 million acres and the result of discrimination and dispossession. While farm management is among the whitest of professions, farm labor is predominantly brown and exploited. The system is built on stolen land and stolen labor and needs a redesign. *Farming While Black* is the first comprehensive "how to" guide for aspiring African-heritage growers, and for all farmers to understand the distinct, technical contributions of African-heritage people to sustainable agriculture. Throughout the book Leah Penniman uplifts the wisdom of the African diasporic farmers and activists whose work informs the techniques described—from whole farm planning, soil fertility, seed selection, and agroecology, to using whole foods in culturally appropriate recipes, sharing stories of ancestors, and tools for healing from the trauma associated with slavery and economic exploitation on the land. Woven throughout the book is the story of Soul Fire Farm, a national leader in the food justice movement. The technical information is designed for farmers and gardeners with beginning to intermediate experience. For those with more experience, the book provides a fresh lens on practices that may have been taken for granted as ahistorical or strictly European. Black ancestors and contemporaries have always been leaders—and continue to lead—in the sustainable agriculture and food justice movements. It is time for all of us to listen.

**A Guide to Seed Saving, Seed Stewardship and Seed Sovereignty**

By The Seed Ambassadors Project. (That’s us!) 4th edition only available in PDF format on the website, free download.

**The New Farmer’s Almanac, Volume IV: The Greater “We”**

By The Greenhorns. 2019. 490 pages. $24.00

Forget the weather predictions and advertisements for “collectible coins” – this ain’t your grandparents’ almanac. Volume IV, with 400 pages of original agrarian content, essays, cartoons, imagery and historical snippets, harnesses the wisdom of over 90 contributors from the Greenhorns community of new farmers and ranchers. Through the theme of *The Greater “We,”* Volume IV explores the social, technological, and ecological processes of diversification. The New Farmer’s Almanac makes a great gift and is a must-have addition to every gardener’s, farmer’s (and aspiring farmer’s) library. Proceeds from the sale of this book go to support the Greenhorns, a grassroots nonprofit that works to support new farmers in America.

By Frank Tozer. Revised ed., 2016. 304 pages. $27.95

A must-have resource for every grower. Covering over 80 common plant types (from amaranth to wheat), in addition to many herbs and edible weeds, this book is remarkably informative. Tozer gives fairly specific instructions for each crop and includes details about nutritional value, soil needs, planting and planting tips, seed facts, weed, pest and disease pressures, irrigation needs, harvest advice, and even kitchen use.

Tozer writes, “I know this book isn’t as pretty as most other gardening books and I have no illusions that it will win any awards for its beauty. I can live with that however, as this book is intended for the tool shed, rather than the coffee table. When you are out in your garden working, you don’t need a book that is two thirds made up of pictures (no matter how well designed and beautiful it may be), you need practical information….The more dirt you get on the pages, the more successful I will have been.” Here–here!
The Organic Seed Grower: A Farmer’s Guide to Vegetable Seed Production
This gorgeous textbook style book has everything you need to know about producing high quality seed crops for most vegetables using organic methods. Information includes isolation distance, population size, genetic maintenance, and tips and tricks of the trade to ensure high quality seed. Additional chapters offer overviews of seed biology, seedborne diseases, and stockseed basics. Beautiful photos illustrate seed selection, harvest, and processing techniques. This book is a must have for anyone who is interested in growing high quality seeds on any scale. Worth every penny!

The Resilient Gardener: Food Production and Self-Reliance in Uncertain Times
By Carol Deppe. 1st edition, 2010. 384 pages. $29.95
This truly is a gardening book like no other. Written in an engaging style, it has loads of information on how to successfully grow potatoes, corn, beans, squash, and eggs – even with constraints ranging from a bad back, to changing weather, to lack of accessible fertility or water inputs, and more. The technical info is rounded out with recipes, anecdotes, photos, and resources. Highly recommended for everyone wanting to expand their gardening abilities beyond the basics and focus on the food crops that can provide real nourishment year-round.

The Seed Garden: The Art and Practice of Seed Saving
Edited by Lee Buttala and Shanyiey Siegel, written by Jared Zystro and Micaela Colley. 1st ed, 2015. 390 pages with 350 color photographs. $29.95
The Seed Garden is a wonderful book that is the result of a joint project between the Organic Seed Alliance and the Seed Savers Exchange, two leading organizations in the topic of seed saving and seed stewardship. The Seed Garden gives step-by-step instructions on saving seed for over 75 crop types and provides a solid starting point for any seed saving venture. It also includes an extended amount of seed saving fundamentals, including information on plant biology, seedborne diseases, germination testing parameters, storage and maintenance, and more. Altogether, it is a valuable addition to the library of novice and experienced seed savers alike. Beautiful and approachable on all levels, we couldn’t recommend this book more highly. Winner of the American Horticultural Society’s 2016 book award, whose award committee describes The Seed Garden as “The only book people will need to grow plants and save their seed,” it provides “critical information packaged in an attractive way” and is “an indispensable, brilliantly written, and beautifully illustrated resource.” Well said!

Seed to Seed: Seed Saving and Growing Techniques for Vegetable Gardeners
By Suzanne Ashworth. 2nd edition, 2002. 228 pages. $24.95
This is the seed saving reference book. It describes specific techniques for saving the seeds of 160 different vegetables. Details include botanical classification; flower structure and means of pollination; required population size and isolation distance; techniques for caging or hand-pollination; and also the proper methods for harvesting, drying, cleaning, and storing the seeds. We reference this book regularly. Absolutely essential for anyone with interest in saving seeds.

The Transition Document: Toward a Biologically Resilient Agriculture
By Harry MacCormack. 4th edition, 2009. 200 pages. $29.95
This is the most comprehensive book we have found about the big picture issues of organic agriculture. It contains in-depth scientific and experiential information about soils and soil biology, chemicals, field practices, compost and compost tea, and the end goal – healthful food from healthy soils for healthy people. Written in an accessible style by one of the original leaders of the organic movement and a founder of Oregon Tilth, The Transition Document is a must-read for anyone interested in organic agriculture.
